I have a Round Emblem Collins 30L1 for sale. This amplifier works great has new Chinese tubes installed. Has between 700 and 800 watts out all bands. This amplifier shows it has been around a while on a scale of 1 to 10 I would say it is a 7 or 8. Not collectors quality. $400.00 plus shipping.

Hi Mr. Fox,

You may go to Apliu Street in Sham Shui Po (Kowloon) to have
a look... there are few shops selling radio equipment.

Hope this info. useful for you!

The point is that times and technologies change. It is inordinately silly and pointless to require demonstrable knowledge of archaic technology in order to be qualified to use newer technology.

>they hit a button on the remote control?

I would suggest that the maximum limit of understanding of 90 percent of TV watchers is:

a. The TV must be plugged in to work
b. The TV should come on when I press the ON button.
c. The channel should change when I press CH UP or CH DOWN.

>
>>But, to lock out the hobby to those who simply cannot

>the licensing system like in your country?

I'm aware that there is a no-code license. I almost have the technical and rules knowledge to get it. My point (which you missed) was that the original poster was advocating that those who couldn't or wouldn't learn the Morse code should be locked out of participation in amateur radio. I was attacking that assertion for the idiocy that it is.

I didn't catch your original post and was unable to access your .wav
file today. Probably your question has been answered adequately already,
but one thing to consider is that you were hearing the "backwave" of a
beacon identifier. In other words, the "key up" versus the "dey down"
condition, which makes for some strange Morse characters. Here in
central Minnesota, I used to hear a CW signal at about 1632 kHz, which
turned out to be the backwave of a harmonic of a sideband of
aeronautical beacon HRU (Herrington, KS, 407 kHz).

5889. What Are Current W5YI Testing Study Materials?

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-16 00:00:00 UTC
From: Douglas Gavilanes <gavilan1@earthlink.net>
Message-ID: <332BEF9D.2543@earthlink.net>
Source record: 202305

I have the Practice program for the PC by W5YI, for upgrade study for General, Advanced, and Extra. In the last few days, I was told that at least the Extra material is out-of-date (even though this software is from about a year or so ago, and allegedly covers the 1994-to-date question pool), and that some or all of the other tests may also be dated. Who can tell me for a fact that this is correct or not?

On a side note, a VE testing session here in the Long Beach, CA. area, announced (before the tests) to the test-takers that if they had studied the W5YI materials, that they were in big trouble, because the VEs were not using those element questions, and indeed were going to use (modified?) ARRL test elements, because they want "only real hams" to pass their tests, not people good at memorization. To top it off, these folks were rude, and some novice-to-be new hams were terribly discouraged about ham radio by these folks. What gives? Is the Extra spectrum already "too crowded" for these particular guys, that they don't want new blood moving up? How does this correlate to proper FCC VE testing policies, and to ARRL policies? The fact that these tests are held at the local police station and Red Cross chapter should concern those agencies, too.

Concerned,

Doug Gavilanes, N6XQY

How did freebanders get in to a code/no code argument and an English
only argument?
BTW, someone mentioned that French was the language of the UN.
Last time I checked there were SIX languages recognized as legal in
the UN.
What with all the money spent on translating ALL documents into ALL SIX
languages, it is just too logical to use Esperanto - translate all
documents only into Esperanto and then each country (read language group)
that wants copies can translate them from Esperanto into their own
national language.
Esperanto is recognized by several UN agencies, among which is UNESCO.
There is a very active UN Esperanto group in New York, among UN
employees.
There is a disportional share of Esperantists among Nobel Prize winners
as well.
Esperanto estas la moderna, facile lingvo por la TUTA mondo!

I recently was given six used Motorola MT-500 handheld radios for
a Disaster Medical Assistance Team. Obviously I don't want to use them
on the Public Safety frequency that is now in them.

Does any one know what it takes to modify them ??? I am assuming
they take a crystal so how does one change the crystals ? Where can you
buy new crystals ? How far from the current frequencies can I move them
without loosing the desire characteristics ? Does anyone know where I
could get operating manuals and/or schematics ?

Please EMAIL me directly as I doubt that this subject would be of
much use to a large segment of the amateur community

>
>Thanks...Joe
>

Loss in dB = 32.45 + 20 log (freq) + 20 log (distance)

where
freq is in MHz
distance is in km

Before some MF/HF enthusiasts jump up and claim that VHF/UHF/SHF are inherently more lossy and thus useless due to the 20 log (freq) in the equation, this is just an artifact how the link budget calculations are done.

Usually the link budget is calculated as converting transmitter power to dBm (or dBW), adding transmitter antenna gain, subtracting path loss and adding receiver antenna gain to get the received power in dBm (or dBW).

While it makes a lot of sense to express the transmitter antenna performance as gain (or directivity), which is the same for a dipole on 80 m or on 23 cm. The receiver antenna gain (or directivity) is the same (for a similar construction such as dipole) on 80 m as on 23 cm. However, the capture area for a 80 m dipole is about the size of the wall of an apartment building, while on 23 cm, the capture area is about the size of your hand (varies relative to the square of the wavelength). Thus for the same power density (or field strength) the collected power at 80 m is huge compared to 23 cm (inversely proportional to the square of frequency).

For some strange reason, the difference in capture area is included in the path loss formula, when the better place would be to express it when evaluating the performance of the receiving antenna.

********* "RARSfest 97" *********

RALEIGH HAMFEST and COMPUTER FAIR

SUNDAY, APRIL 13

NORTH CAROLINA STATE FAIRGROUNDS

3500 attended last year! Giant, all-indoor flea market, plus plenty
of dealers, contests, meetings and forums, prizes, VE Exams, and
the famous "Saturday Night Social."

Location: North Carolina State Fairgrounds, Jim Graham Building.
Follow the Interstate 440 Beltline around Raleigh, to
exit 3 - Hillsboro St., and go west one mile to the
Fairgrounds.

Talk-in directions on the 146.64 Repeater.

Date/Time: SUNDAY, April 13, 1997, 8 am to 4 pm.
(Building opens at noon Saturday and 6 am Sunday for
dealer/vendor setup.)

Admission: Pre-register: $5 (before April 5). Gate: $6.

Flea Market: Table/2 chairs: $10 (5 or more tables: $9 each).
120 Volt AC: $10 per connection.
Drive-In unloading/loading permitted. Bring your
own extention cords and carts. Sorry, no tailgating
in the parking lot. (See address below for
registration.)

Parking: FREE on site!

VE Exams: Exams begin at 11 AM. Bring Picture ID, original
AND photocopy of license and any CSCE's. $6.25.
Contact Vince AA4MY at 919-847-8512 for VE only.

Meetings: ARRL/ARES, NTS, Army and Navy MARS, ATV,
Packet, DX.

-- CONTESTS --

Mobile Enter your mobile station. Separate category for
Contest: VHF/UHF-only mobiles.

Homebrew Enter your homebrew projects.
Contest:

QLF Contest: "QLF" Now try sending with your Left Foot. Yes,
it's an official "left foot" sending contest, with
the largest "straight key" you've ever seen!

QBH Contest: "QBH"??? Now try sending with Both Hips. You'll
have to see, and TRY, this one to believe it. The
biggest set of keyer paddles you've ever seen!
Grass skirts optional, but may affect your chances
of winning (we're not saying which way your chances
may be affected... what shape are your knees in?)

CA$H prizes for 1st, 2nd and 3rd place winners. Not
enough to retire on, but enought to make it worth
your effort. For contest entry information, contact
Rick Merkle KA3PSK at 870-8268, or e-mail him at
ibmrick@aol.com.

General The NC State Fairgrounds hosts a permanent, general-
Flea- merchandise flea-market just outside the hamfest
Market: building. Admission to that flea-market is FREE!

FOR TICKETS For tickets, tables, etc., make checks payable to
AND TABLES "RARSfest." Include your name, call, address,
and S.A.S.E !! Mail to:

Ronnie Reams WA4MJF
SASE REQUIRED! 3509 Rolesville Rd. SASE REQUIRED!
Wendell, NC 27591

Requests received after April 5, or without S.A.S.E.,
will be held at the flea-market vendor door on the west
side of the building.

This year's hamfest is dedicated to the memory of
Rollin Ransom, NF4P (SK).

********** SEE YOU THERE FOR OUR 25TH YEAR *********

I've heard that rumor about every rig on the market. The best answer I ever got from a manufacturer was this "If it could do double the power dont you think we would sell it for more $$$$". That was from Azden about the 7500H.... if you arent worried about cooking your rig, give it a try. Then report back in a week to all the rest of us...Good luck and 73's

Well, lets see. He has a computer and a VHF and/or UHF FM rig already he needs the hamcomm circuit ($10 to $15) and Jvfax (Free) thats why fool around with SSTV on VHF/UHF. Its CHEAP. Weve been running an SSTV net on 145.560 for about a year now. Its great fun and gives you something to do on 2 meters besides working the local repeaters.... go for it...N8XYN

I'm interested. I built 2 ramsey light beam kits and was VERY
unimpressed. They work for all of 1 foot. I'm thinking about useing
them to modulate a laser pointer. I'm not sure if that will work but
its worth a try...have you got some ideas whipping around...I'd like to
hear them....N8XYN

Believe me, that kenwood rig will out perform the IC706! The 706 does a
lot, but it dosnt do it as well as dedicated rig. I bought a TS60
instead of the 706 (NEW) because it performs much better in the 6 meter
band......N8XYN

5922. DR-150T power adjustment MODS???

>CQ magazine had an article around 1981 called "Wait for the Beep!"
>that presented a hypothetical situation and showed how absurd all
>of this nonsense really is. I guess some people just have nothing
>better to do.

I get bugged at the cutesy ones which sound more like a video game, but the original purpose is quite good.
There are a lot of quick key folks who otherwise wouldn't wait for repeater timers to reset, and more importantly, leave a gap for a station who needs assistance, etc, to transmit and make their need known.
The courtesy tone is there to remind us to do this in many cases. If we were all a bit more considerate about leaving a gaposis when using the local machine, repeater ops wouldn't have seen the need.
Most of them in this area don't reset the timer until the courtesy tone. I liked the short tail with no beep, but every machine I hear that uses this practice seems to have their share of quick-key ragchewers who don't leave a space for another station to get a word in edgewise.
Just my $0.02 worth.

5928. Compromise CW vs No-code

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-16 00:00:00 UTC
From: "Matthew A. Erickson" <kk5dr@io.com>
Message-ID: <332C3973.1ACB@io.com>
Source record: 202371

I propose a compromise between the two faction groups.
Change the license requirements to de-emphisise the code part of the test, making it only 30% of the total score on the whole test. In that way you could pass the exam and get your license with 70% or a perfect score on the theory part of it, or get partical score for the CW you did copy, making your passing score much better, and you could have less than a perfect score on the theory.
Then it would be up to you weather or not you wished to use CW in your day-to-day ham use.
CW, should allways be legal to use on our bands, just not the determining factor, in weather you can get a license or not. It's a matter of personal choice.
A minimum knowledge of CW is desirable, but is not nessesary.
The ARRL, in and effort to "tell all hams" how we should think, is dictating to use what the policies shall be.
Shouldn't "WE", be the ones to think for ourselves, and make "OUR" own choices ??

A.N.A.R.T.S. News Bulletin 950 16 March 1997

COLS COLUMN

WE RETURN AGAIN TO THE SERIES ON EARLY COMMUNICATIONS AND

CONTINUE WITH JOSEPH HENRY.

HENRY'S WORK ON INDUCTION AND SELF-INDUCTION IS REMARKABLY

SIMILAR TO THAT OF FARADAY. HE CONSTRUCTED A NUMBER OF LARGE

ELECTROMAGNETS TO STUDY THEIR PROPERTIES. HENRY WAS NOT A

DREAMY PHILOSPHER, HE WAS ALWAYS WATCHING FOR PRACTICAL APPLICATIONS FOR HIS PRINCIPLES. HE CONSTRUCTED WHAT MIGHT BE FAIRLY DESCRIBED AS THE FIRST ELECTRIC MOTOR WITH THE EQUI-VALENT OF AN ARMATURE AND COMMUTATOR. IN 1831 HE SAID 'I HAVE LATELY SUCCEEDED IN PRODUCING MOTION IN A LITTLE MACHINE BY A POWER WHICH I BELIEVE HAS NEVER BEFORE BEEN APPLIED IN MECHANICS, BY MAGNETIC ATTRACTION AND REPULSION.

AN IRON BAR ABOUT 1 FOOT LONG WAS PIVOTED AT ITS CENTRE. TWO SEPARATE COILS OF WIRE, INSULATED FROM EACH OTHER, WERE WOUND IN OPPOSITE SENSES, ONE ON EACH END OF THE BAR. THE WIRES WERE BROUGHT AWAY FROM THE BAR SO AS TO CAUSE NO PHYSICAL CONTACT WHEN THE BAR MOVED. EACH COIL HAD ITS OWN BATTERY CONSISTING OF A COPPER AND ZINES PLATES IMMERSED IN DILUTE ACID, THEY WERE ALSO PLACED ONE AT EACH END OF THE BAR. BRASS THIMBLES WERE SOLDERED TO THE POSITIVE AND NEGATIVE PLATES OF EACH BATTERY AND FILLED WITH MERCURY.

THE ENDS OF THE WIRES WERE JUST ABOVE THE THIMBLES. WHEN THE BAR WAS TILTED, THE WIRES ON THE LOWER END OF THE BAR DIPPED INTO THE MERCURY AND THE BAR WAS MAGNETISED. TWO PERMANENT MAGNETS WERE POSITIONED VERTICALLY BENEATH THE ENDS OF THE BAR, BOTH HAVING THEIR NORTH POLES UPWARD FACING THE BAR. THE WINDINGS OF THE COILS WERE SO ARRANGED THAT AS THE BAR DIPPED IN ONE DIRECTION IT WAS MAGNETISED WITH THE SAME POLARITY AS THE PERMANENT MAGNET AND WAS REPELLED AMD MOVED UPWARDS BREAKING THE CONNECTION TO THE BATTERY.

THE MOVEMENT WAS ENOUGH TO DIP THE WIRES AT THE OTHER END OF THE BAR INTO THE MERCURY BENEATH THEM AND SO WAS ALSO MAGNETISED AND AS THE BAR REACHED THE PERMANENT MAGNET WAS REPELLED IN ITS TURN. THIS PROCESS REPEATED CONTINUOUSLY UNTIL THE BATTERIES WERE DEAD. THE BAR RECIPROCATED AT ABOUT SEVENTY FIVE TIMES PER MINUTE. THIS 'MACHINE' IS REMINISCENT OF THE

EARLY STEAM ENGINES WITH ITS ROCKING BEAM.
THE ELECTRIC MOTOR WAS NOT OF PRACTICAL USE UNTIL 1834 WHEN MOTORS WERE CONSTRUCTED USING A ROTARY ACTION. HENRY HIMSELF KNEW THIS AND HE SAID 'NOT MUCH IMPORTANCE, IS ATTACHED TO THE INVENTION, SINCE THE ARTICLE, IN ITS PRESENT STATE, CAN ONLY BE CONSIDERED A PHILOSOPHICAL TOY, ALTHOUGH IN THE PROGRESS OF DISCOVERY AND INVENTION IT IS NOT IMPOSSIBLE THAT THE SAME PRINCIPLE, OR SOME MODIFICATION OF IT ON A MORE EXTENDED SCALE MAY HEREAFTER BE APPLIED TO SOME USEFUL PURPOSE'.
THE PROPHESY IN THE LAST FEW WORDS HAS BEEN FULFILLED BEYOND HENRY'S DREAMS. THE ROCKING BAR HAS BECOME THE ARMATURE AND THE WIRES DIPPING INTO MERCURY HAVE BECOME THE COMMUTATOR IN A MODERN ELECTRIC MOTOR. THE ELECTRIC MOTOR HAS PLAYED AS GREAT A PART IN TWENTIETH CENTURY TECHNOLOGY AS DID THE STEAM ENGINE IN THE INDUSTRIAL REVOLUTION. IN THE NEXT EPISODE, WE CONTINUE WITH JOSEPH HENRY, I DID WARN YOU THAT HIS WAS A LONG STORY.
73S FOR NOW DE COL VK2CTD.

-+- BARTG SPRING RTTY CONTEST -+-
Sponsored by British Amateur Radio Teledata Group.
Third full weekend in March (Ref: BARTG, G4SKA)
Contest Period: From 0200Z Saturday to 0200Z Monday (48 hours)
Maximum operating time allowed: 30 hours for single op and SWL entries. Multi-operator stations may operate the full 48 hours. The 18 hours of rest periods may not be less than 3 hours each.
MODE: RTTY only
BANDS: 80, 40, 20, 15, and 10M
CATEGORIES: 1) Single op, all band 3) Multi-op, all band
2) Single op, single band 4) Multi-op, Multi-transmitter

5) Short Wave Listener

NOTE: Categories 1, 2, and 3 may not transmit on two or more bands at the same time. No station may enter more than one category.

EXCHANGE: Send: RST + QSO number + Time in UTC.

MULTIPLIERS:

"NOTE:" (((Starting in '97, JA 0 thru 9 call areas are now included as additional multipliers.)))

Each DXCC country, including first QSO with W, VE, VK and JA will counts as a multiplier on each band. Each call district in W, VE, VK and JA will count as an additional multliplier on each band. Also, each continent (6) will count once, not once per band.

QSO POINTS: Count 1 point per QSO. Same station may be worked on other bands. Duplicate contacts on same band receive zero points and must be clearly marked in the log.

FINAL SCORE: Total QSOs x total multipliers x number of continents (max 6)

LOGS: Use separate logsheets for each band. Logs must show: BAND, DATE and TIME (UTC), CALLSIGN, MESSAGE Sent and Received, COUNTRIES and POINTS claimed. Summary sheet must show full scoring, times of operation, and address for correspondence. Include names and callsigns of all multi-op station operators. Computer generated logs containing all specified info are welcome.

DEADLINE: Logs must be received by May 31 to qualify.

Mail logs to:

JOHN BARBER G4SKA

PO BOX 8

TIVERTON, DEVON

EX16 5YU, ENGLAND

AWARDS: Certificates will be awarded to the top 3 stations in each category, the top 5 single operators in each continent, and to the top single operator in each W/VE/VK call area. Your comments would be much appreciated. Please include them with your log.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(07 MARCH - 13 MARCH)

ISSUED ON 14 MARCH 1997

SUMMARY

Date 07 08 09 10 11 12 13

10cm 74 75 75 75 74 74 74

A 9 5 2 2 3 16 (10 ESTIMATED)

T 14 13 18 20 7 20 11

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH, W.A. WAS QUIET OR QUIET TO UNSETTLED DURING THE PERIOD, EXCEPT FOR 12 MARCH WHEN THE FIELD WAS UNSETTLED TO ACTIVE.

FREQUENCIES WERE NEAR MOSTLY NEAR PREDICTED MONTHLY VALUES WITH DEPRESSED PERIODS TO 15 PER CENT ON 8TH AND 13TH MARCH, AND ENHANCED TO 40 PER CENT 0700 TO 1500 UT ON 12TH. SPREAD F WAS PRESENT ON 8TH AND 9TH MARCH DURING LOCAL NIGHT.

FORECAST (14 MARCH - 20 MARCH)

SOLAR: VERY LOW

GEOMAGNETIC: QUIET ON 14TH, THEN A GRADUAL INCREASE IN GEOMAGNETIC ACTIVITY IS EXPECTED, WITH ACTIVE LEVELS, (POSSIBLE MINOR STORM PERIODS) EXPECTED ON 16 MARCH. THE FIELD IS THEN EXPECTED TO RETURN TO QUIET LEVELS UNTIL 21 MARCH WHEN ANOTHER MILD INCREASE IN ACTIVITY IS EXPECTED.

FREQUENCIES: INITIALLY, GOOD HF COMMS EXPECTED. DEGRADED

CONDITIONS EXPECTED FOR MID TO HIGH LATITUDES

DURING 16-17 MARCH, IN ASSOCIATION WITH

GEOMAGNETIC ACTIVITY.

COURTESY OF IPS RADIO AND SPACE SERVICES

NOTES OF INTEREST:

YEMEN, 70. Questions have been asked about the status of the 7O1A operation from Aden, Yeman. ARRL HQ has been in communications, resulting in the following information. The ministry of Communications in Sana'a, capital of Yeman, has advised us by both fax and telephone that while it is aware of a document issued by its Aden office, the ministry of Communications in Sana'a, as the main body responsible for communications, had never issued an official authorization for Amateur Radio. In accordance with this communication, the 7O1A operation cannot be accepted for DXCC credit.

JAN MAYEN, JX. Per, JX7DFA, has been active on the low bands working stateside RTTY. Look for him 14085 around 1700z. QSL via his home call LA7DFA and they will be answered on his return to Norway in late April.

It would be interesting to know how many processor chips you radio has in
it.
Did you build it or purchase it as an appliance? Can you maintain and
repair it?
Do you understand all the logic operating within the case?

That is why we are AMATEUR OPERATORS... using modern comm. equipment.

Not to belittle anyone, just stating the facts. (as I see them)

Hi Tom - throw away the tapes and instead get on the air! It's work
listening to tapes but that work turns to fun when you're using the
code on the air. You'll get past that 8wpm with little effort and be
at 15-20 in no time if you'll just fire up you radio on 40m in the
evening; it'll work just like magic.

```
This is incorrect. Milliwatts = watts * 10^(-3) so the last line
should read 10 log(tx power in watts) - 30.

>... hams ...

Just as we refer to ourselves as hams in place of "amateurs"
we also refer to our service as a hobby. No where in Part 97
is "ham" radio mentioned.

>Operators will be assigned an arbitrary 1 hour period on a weekly
>basis for personal emergency frequency monitoring on 500 KHz and
>2182 KHz (correct me if those frequencies are wrong, I'm going
>from memory), so that Operator hams actually stand a chance
>of monitoring a frequency on which a Morse SOS might someday
>occur now that the Coast Guard no longer cares to provide that
>service, but Morse advocates insist that was a mistake.

2182 kHz is the international HF/MF SSB calling and distress freq'y.
You'll never hear an SOS on it, only a Mayday. Ships and shore stns
still monitor it. And if you were going to require monitoring of
500 and 2182, it would only be natural to do so during the silent
periods (SP): For 500 kHz - from minute :15 to minute :18, and from
minute :45 to minute :48 each and every hour; for 2182 kHz: from minute
:00 to minute :03, and from minute :30 to minute :33 hourly.

Regarding your "121.5 auto alarm comment":
There is no auto alarm signal for 121.5 that I know of.
The 500 kHz AA consisted of 12 four-second dashes with one-second
pauses; four such properly timed dashes would trip the AA receivers
onboard any ship within receiving range. 2182's AA had nothing
automatic about it - it was only an aural attention-getting device
(two alternating tones). 121.5 MHz, aircraft distress, has no AA
signal, unless it's a recent development.

So much misinformation get dished out on this net!

Call it whatever you want. To a vast majority of its users,
it is not a service, it is a hobby. Try telling people who
use CB radio that it is a "service" (which, according to the
FCC's definition, it is.)

>* Having to buy a decent non-inductive 50 ohm dummy load of
>an appropriate power dissipation, rather than just going to
>Radio Shack and picking up a 10 cent 1/4 watt 50 ohm resistor
>for his Yaesu. After all 50 ohms is 50 ohms, isn't it? What
>is an ohm anyway?

Nah, that would require you to solder something. Just buy the
radio shack 10-watt dummy load to begin with. Its got the
requisite connector plus heat-sink, already connected.

>* Having to actually measure an antenna and tune it up rather
>than throwing out any old piece of wire anywhere he'd like.
>After all he paid good money for a 1KW linear, so what if the
>antenna gets a little hot or the plate is starting to radiate
>X-rays, he's still getting a few watts out.

Who tunes an antenna? Computers do that. I hit a little button
labelled "tune" and if the computer can't tune the antenna I get
a blinking red light that sez "Hi SWR" -- not to mention that the
radio automatically cuts back power to 5 watts even if it is set
to transmit at 1KW.

>* Paying attention to his frequency, for that matter. After
>all "frequency" is a theory word. Don't even bother mentioning
>harmonics, spurious emissions, intermodulation, distortion.
>It takes too much theory to understand those.

Sure does. Not to mention that the average ham doesn't have a
service monitor anyway to know if they are emitting any spurs.
They rely on someone else telling them. Just like they rely on
someone else telling them their speech processor is set too high.

>* Having to acknowledge that *technical* hams developed
>AM rigs, then SSB rigs, then FM rigs, so that all hams could
>actually communicate the way they do in every day conversation
>and transmit voice and emotion. Whereas, otherwise, they might
>have had to wait another decade or two or more for those stodgy
>commercial firms to figure out that there was a market for more
>than just fine conservative CW rigs.

What percentage of amateur transmitters is self-built versus
bought today at HRO and AES? Self-building is another overrated
aspect of this hobby. Hey, if you want to waste the time, go ahead.
I'll save myself time and aggravation, not to mention get on the
air right now, by using Mr. Gold Card.

>* Having to face up to the fact that he is paying someone else
>dollars to make up for the expertise he lacks and he can't even
>be sure that he got his money's worth because he doesn't know
>a bit of theory.

Life is filled with such examples, why is amateur radio any different?
Do you really know what that salesman (car, computer, electronics,
housewares, take-your-pick) is telling you is really true? In more
cases than not, no, you don't.

>Tell you what, let's stuff the six license classes down to
>2 licenses; Operator and New Technician.

How about 'Appliance Operator' and 'Know-It-All'?

[Morse code drivel deleted -- can't figure where morse came into
the picture here, since we were talking about theory, but anti-code
advocates tend to do that]

>Regards Don WB6LPJ CW spoken here

Nice story but according to our local newspaper he DID NOT USE MORSE CODE.
Instead, he used a scheme where the transcriber would say a letter beginning
with the most commonly used letters first (e.g. the letter "e" appears most
often in the English language). He would then blink to indicate yes or no for
the use of this letter.

While 1 milliwatt is 0.001 watts, you need one thousand of those small creatures to make up a full watt. For those more familiar with Imperial units, a 2 feet long stick can also be said to be 24 inch long, thus, when the unit gets smaller, you need more of them.

To calculate the example with the 20 W, the power in dB relative to 1 W is

10 log (20 W / 1 W) = 13 dB relative to 1 W or +13 dBW.

If we want to express this relative to 1 mW and since 20 W = 20000 mW we get:

10 log (20000 mW/ 1 mW) = 43 dB relative to 1 mW or +43 dBm.

But we can also write (noting that log (A*B) = log(A) + log(B))

10 log (1000 * 20 / 1) =
10 log (1000) + 10 log (20/1) =
30 + 10 log (20) =
30 + 13 or +43 dB relative to 1 mW.

So the power relative to 1 mW (dBm) is power relative to 1 W (dBW) + 30 dB.

Not in the US - by law. Digital modes (other than CW) are permitted only
between 28.0MHz and 28.3MHz in the USA.

However, I've heard quite a bit of packet around 28.103 at 300 baud,
and 1200 baud packet at 28.195, all using FSK (usually AFSK with an
SSB radio).

Like Dayton? No.

However, there are two good swap meets each month. The first
Sunday of each month there is a big swap meet in Livermore
(off of I-580 at Las Positas College, east of the I-580/I-680
interchange, starts 7AM). This one is year 'round, rain or
shine. The other one is at Foothill College (off of I-280
at El Monte Road, Los Altos, starts *very* early AM). This
one is runs spring through fall (March through September?
...October?)

Lots of stuff to look at at both flea markets, prices are usually
reasonable, lots of cast off stuff from the local high tech companies
(o'scopes, freq generators, printers, plotters, PCs, parts). Quite
a few of the vendors hawk their wares at both locations.

I try to get out to one or the other every few months...unless I'm
looking for something!

Sigh.

If I said that blacks and immigrants were incapable of learning Morse code,
then I am a racist too I suppose? I think that Morse is "fair" in that
nobody knows Morse as their first language: everyone learns it as a second
language. There might be other factors which prevent blacks and immigrants from
entering ham radio, and racism indeed may be one of them, but I doubt that it
is the Morse requirement that is the biggest factor.

>I realy wanted my licence but my friends just lost intrest.

Just curious..what is CB gabbing? Is it just pointless stuff or obscene language? This isn't a complaint...just a simple question. I've been a ham for almost 8 years and have lost a lot of interest except for CW b/c when I listen to the phone bands...no one talks about anything...unless they knwo each other. Thats why I was asking about CB gabbing...what else is there to do? I like CW b/c (Here's one for you techs/anti-code people) it is a quick exchange...no need to talk about what kinda "rig" he has and what the "WX" is in Lima, Ohio...who cares? 2m is even worse...a common exchange "Well, I'm on the way home from work...traffics kinda bad" How muich more dry can you get? Granted, I'm fairly young so dont care to listen or talk to the local OM who monitors the repeater all day....Morse doesnt make the hobby seem uninteresting...the lack of intelligent exchanges makes it unbearable. Just my thoughts....

I have for sale a Round emblem Collins 30L1. This Amplifier works perfectly with 700-800 Watts output All bands 80-10 Meters. This unit shows wear and use, it has no dings or dents but the paint is faded and the white plastic ring is yellowed. on a scale of 1 to 10 I would class it a High 7 or maybe and 8. Selling because I got another Amplifier. Will sell for $400.00 plus shipping.

Source record: 202255

Several years ago, I had the opportunity to see Dud Charman's Aerial Circus which, for those of you who might not have heard of it, was a demonstration of aerials, propagation, radiation patterns etc, all done at about 3000 Mhz over a large copper sheet ground plane. Although the demonstation was not done by Dud (he had died some years earlier), it still carried his name.

By now you must be asking what all this is about!

Quite simply, I'm trying to find out whether the demo is still being done, and if so, by whom. (I've tried the RSGB, but they've never heard of it!)

If anyone out there knows the answer, I would very much appreciate an Email.

>> You're gonna love this. I'm so close to the airport, I smell
>> jet fuel when I go out in the morning

I have that beat. Here, we tell the wind direction by what the pollution smells like. Burned Jet-A is SW, H2S is south, smog is east. :-)

I hear all of LAX's various marker beacons and such. None sound even slightly like Steve's interference. The outer markers repeat slow strings like "OS" in Morse. The localizers send things like "I-OSS". The VOR ID's "LAX" in slow Morse and voice, constantly. All these signals have carriers. The Morse code is really audio. You hear it without a BFO, though it's easier to tune with one.

After a while you get used to the tempo and sound of these beacons and you can pick them out of the grunge. The only thing here (besides malfunctioning lamp controllers and such) that ever made noises like that was the DGPS beacon before it went to a straight data stream. It had that same ragged sound, bad mechanical contacts perhaps, but not the raw AC.

Thanks, Steve, for a real good mystery here.

>ordinary telephone voice line. Why is it illegal to do exactly the same
>using an HF channel? Or a 900 MHz rig?
>
snip

last I looked, it's not practical "at this time" to run high speeds on
HF "because it takes too much bandwidth." Don't know my self, because
I'm only just getting into VHF/UHF packet, and sticking to 9600 baud.

I would suspect that if you could find someone to work with, that 56K
would not be unlawful on the UHF/SHF freqs, just difficult- afterall,
the Bit error rate would add up due to multipathing unless you were
working dish to dish LOS like the "big boys" do.

IIRC, even 45 "baud" Baudot communications is substantially faster
than the best Morse work- and there are folks working 1200 on HF freqs
at this time- what does this tell you about the Morse masters?

How about more on antennas and "engineering" as well as "good
practices" in the written testing- or a practical test- set up a Field
Day station and complete a voice contact...

I am a member of the ARRL, but seem to have missed getting one of the
surveys- I guess that I will just have to write in- code is OK if
there is nothing else, but pitifully slow for anything. I don't mind
having to learn some for "Treaty" requirements, but would like to see
it required for relicensure- eg fine, you want to save parts of the HF
bands for our code work, you have to re qualify at your stated speed
every time you renew your license.

In the mean time, change the FCC requirments to match those of the
WARC treaty currently in effect.

So the users of MARS are free to call it a hobby too? I
don't think that would get very far with DOD. What makes
it "not a hobby" is the stated charter goals. The fact that
you think the Amateur Radio Service charter goals are
inconvenient words that you memorized once to pass a test
is now obvious.

>Nah, that would require you to solder something. Just buy the
>radio shack 10-watt dummy load to begin with. Its got the
>requisite connector plus heat-sink, already connected.

Whoops, that 10 watt dummy load just burned up when you put
100 watts through it. You didn't really know what a watt was
did you? That would be admitting a little theory.

>Who tunes an antenna? Computers do that. I hit a little button
>labelled "tune" and if the computer can't tune the antenna I get
>a blinking red light that sez "Hi SWR" -- not to mention that the
>radio automatically cuts back power to 5 watts even if it is set
>to transmit at 1KW.

So what do you do when this fancy computer can't tune the antenna.
Send it all back to the shop? Or maybe if you knew something, you
might know that a capacitor or inductor of the right value in the
right place would get you on the air instead of twiddling your thumbs
for two weeks only to hear, that "Yup, that tuner and that antenna
can't achieve a match. No returns."

>Sure does. Not to mention that the average ham doesn't have a
>service monitor anyway to know if they are emitting any spurs.
>They rely on someone else telling them. Just like they rely on
>someone else telling them their speech processor is set too high.

But you would know that you don't need a service monitor. You
can use another receiver to check your own emissions as well.

>What percentage of amateur transmitters is self-built versus

>aspect of this hobby. Hey, if you want to waste the time, go ahead.
>I'll save myself time and aggravation, not to mention get on the
>air right now, by using Mr. Gold Card.

So tell me. What makes you any different than a CB-er. The code?
Any pro-Morse hams want to speak up and be counted in MD's corner -
that it's perfectly OK to be a "don't understand ohm's law" Advanced
as long as the 13 WPM code was passed?

>Life is filled with such examples, why is amateur radio any different?
>Do you really know what that salesman (car, computer, electronics,
>housewares, take-your-pick) is telling you is really true? In more
>cases than not, no, you don't.

Yes I do make that effort. For those who don't, well that's why so
many people do get taken and why so many people hate car shopping.
That's also why consumers turn to periodicals like Consumer Reports.
Because they know they don't know enough and at least wish they could
and are willing to do some legwork to find out a little more.

>>Tell you what, let's stuff the six license classes down to
>>2 licenses; Operator and New Technician.
>
>How about 'Appliance Operator' and 'Know-It-All'?

Better to know something than know nothing.

>[Morse code drivel deleted -- can't figure where morse came into
>the picture here, since we were talking about theory, but anti-code
>advocates tend to do that]

But the proposal was to get rid of all theory testing. I admit I
jumped to the conclusion that meant you believed a Morse test was
all that was necessary, so I went on to paint a picture of the two
separate license classes, one all code and one all theory. I thought
that was obvious. Or are you in fact proposing getting rid of both
theory and Morse? You really do want the ham bands to be just
like CB!

It is one thing to say that we are hams versus radio amateurs
as the term "ham" only has the meaning that we provide for it
and in that sense has become synonymous radio amateur in popular
usage. "Hobby" has a different meaning in popular context than
"service".

>>Operators will be assigned an arbitrary 1 hour period on a weekly
>>basis for personal emergency frequency monitoring on 500 KHz and

>minute :45 to minute :48 each and every hour; for 2182 kHz: from minute
>:00 to minute :03, and from minute :30 to minute :33 hourly.

But Jeff, what about the Marine transceiver tuned to 2182 whose
mike got wet during the frenzy and the operator can only key the
PTT? Isn't that a favorite "if all else fails scenario"? Also,
is a small boat, that is sinking, supposed to wait until a silent
period before transmitting? My understanding was that the silent
period was to allow a weak signal to be heard, not that distress
signals would occur only during the silent periods. Once
a ship is in distress, they can transmit any time they want.

But my real point was that someone in an emergency is only likely
to call *and* be heard on an acknowledged distress frequency. If
some hams insist that CW should be learned for emergency use, then
such hams should also develop a plan to listen to *any* acknowleded
calling frequency on a 24 hour basis, both on ham bands and other

than ham bands, as otherwise they are not really going to be there
when needed, except maybe for another ham.

>Regarding your "121.5 auto alarm comment":
>There is no auto alarm signal for 121.5 that I know of.

>automatic about it - it was only an aural attention-getting device
>(two alternating tones). 121.5 MHz, aircraft distress, has no AA
>signal, unless it's a recent development.

Auto alarm was in small letters, not caps. Perhaps I should have used
a less familiar term, such as automatic alert. I am familiar with the
ship's AA and thank you for the details of the signal. But that
was not what I was referring to. I am referring to the situation that
an experimenter would be allowed to develop a system that automatically
noted a signal, recorded the signal, marked the time, and informed
the operator that an event had occurred. This was to emphasize that
an experimenter could get technically creative about doing his
assigned monitoring job, whereas an Operator could not, since by
definition, an "Operator" (as defined in the post) wasn't technical.

Rec.radio.amateur.policy was created specifically to take the code debate off of .misc. But last year, Carl decided that .policy was an "obscure and not widely read newsgroup" and felt the debate should be brought over here rather than relegated to "some NG that few news admins subscribe to" (just more horse poop). He even went so far as to delete the "followup to: rec.radio.amateur.policy" that many of us placed in the header.

So please, if you do see a code article on here and post a followup, append "Followup to: rec.radio.amateur.policy" in the header and pray that Carl won't delete that. He says he doesn't do that anymore but...

I don't believe that we are left with a mutually-exclusive choice
between having a popular hobby and having a challenging one. Carefully
structuring licensing standards and operating requirements to be
intrinsically interesting may "trick" (for want of a better word) young
people into working hard and learning without realizing that they are
doing so. In an amateur context (such as ham radio, sports, music, art,

etc.), intrinsic motivation may be the only worthwhile reason to do something. Even in a professional context, intrinsically-motivated people are more productive (sociologists have proven this time and time again).

Conversely, standards are meaningless if they don't represent knowledge, knowledge in people's minds that is continually being thought about, shared with others, and improved. "Effort," in and of itself, is not necessarily a virtue (we seem to have misinterpreted our Protestant Work Ethic in this regard), nor does "suffering" automatically lead to salvation. Measuring standards by their required effort and suffering misses the point on why people learn, better themselves, and improve the state of the art, and corresponding state of society. One might argue that more inventions sprang out of laziness than raw sweat. I think we should give young people more credit. Many of them are very bright, and also very shrewd about what are productive uses of their time in learning skills to survive in an increasingly technical, and knowledge-based society.

Taken in this context, some trade-off between, say, high-speed Morse code (intrinsically uninteresting to young people) and (more interesting) networking protocols, communications systems, and advanced electronics (VLSI, surface mount) may increase both our numbers and our competence by making the hobby more relevant, and dare I say it, fun (isn't one of ham radio's implicit, often unspoken, goals to make technology fun, or at least recruit people who think that way?)

I've discussed some of these issues in my (rather lengthy, admittedly) comments to the ARRL on license restructuring:

http://www.novia.net/~pschleck/restructuring.txt

and encourage you to take a look.

>really confident on my results, which is why I'm interested in getting the
>formula.

Mark,

You may be sorry you asked, but here goes.

Your process gives pessimistic answers as you get inside the
far field transition distance for the frequency and antenna
size. For a parabolic dish this transition distance is
defined as: 1 = X = R/2Dsquared/wavelength where R =
distance in front of the aperture and D = diameter of the
dish. Keep the units the same.

The transition distance between the far field and the near
field is defined as X = 1. At X/5, the actual power density
will be 5 dB below what would be expected from a simple
1/Rsquared calculation. The 6dB per half the distance rule
of thumb is based upon the 1/Rsquared relationship that
works fine in the far field. At .15X, actual level is
calculated to be 14 dB below the level predicted by a
1/Rsquared scaling.

The formula involved in this is very complex but here it is:

PD = 26.1 [1-(16X/pi)sin pi/8X + (128X^2)(/pi^2)(1-cos
pi/8X)]

Where PD is the power density multiplication factor above
the level at X=1, pi=3.14159, ^indicates an exponent, and X
is as defined above.

For a uniform line source antenna you must use a different
formula. The far field/near field transition is distance is
defined as X = R/(2L^2)/wavelength. Here L = the length of
the wire. At a distance of .5X the actual power density
begins to track a 1/R line instead of 1/R^2. At .1X the
actual power density is 7dB less than predicted from a 1/R^2
calculation.

This information is from the Microwave Engineers Handbook and buyers guide from 1970, pages 62 and 63. They quoted the original source as Microwave Scanning Antennas, edited by R.C. Hansen, Vol. 1, page 38, copyright 1964 by Academic Press, Inc. New York. Check with your employer's library staff to see if you can get the original source material.

Measurement of power density in the near field is tricky. Reflections can add or subtract from the theoretical results. In the near field the electric and magnetic components of the wave must be measured and considered separately. All tricky stuff requiring specialized equipment and knowledge. There are gurus who understand this stuff who make there living at it.

I hope this description has given you and others some insight into the complexity of the science. I also hope others will gain the same skepticism I have about the difficulty ham radio appliance operators will have assessing the RF exposure levels to which they subject themselves, their kids and their neighbors. I seriously doubt the real world can be reduced to a few easily interpreted graphs which have any real validity. There are just too many variables.

Hello,

I have never had a problem dealing with the HK Chineese. Maybe it was
just the people I was dealing with, but they were never rude or
dishonest.

I know a guy in California who buys ham equipment mail order from HK. I
don't know the name of the store he buys it from, but if you need an HT
he can get you one for less than you will pay from US dealers.

On small items like HT's, cameras, laptop computers, etc. the world is
changing. Because they are small and easy to transport, you best buy on
a Kenwood handheld may be in copenhagen, Denmark, and the best buy on a
German cameras may be in Singapore.

> March 16, 1997

I hope Matt gets a better response than my proposal did.
For the most part, this idea makes so much sense it has
been the case that the pro-coders just ignor it to avoid
even discussing it.

Here's what I posted almost a year ago and at several
occasions since.

Is there a compromise in the CW debate?

First, any compromise must recognize the concerns of both sides and
attempt to bring them together. Step one is acknowledging that there
is a middle ground. In the CW debate, the middle ground most
frequently mentioned seems to be that even if CW is less relevant
today, there should not be any elimination of CW testing, unless there
is an increase in difficulty for the theory elements. What I propose
here may not be a perfect answer, but it does seem to address both
concerns.

Current test requirements for General and Extra require the passage of
a CW test at 13 wpm and 20 wpm respectfully along with a separate
theory test. In both cases the CW test is a stand alone, pass (70%
correct) fail requirement. But what if we offered test takers the
opportunity to take the test elements as they do today OR, as an

option, we let them take the 13 wpm or 20 wpm CW test as an integral part of the respective General or Extra theory (i.e. written) test?

How would that be accomplished?
During any VE session, if a test taker completed the CW test with a passing score of 70%, they would be granted an CSCE and then take the theory test as before. However, if they failed the CW test, they would be permitted to merge the CW test results from that day's test with their theory results also taken on that day only. If they still failed to pass the theory test using a merged score, no CSCE would be issued for either part of the testing.

The actual scoring would be done as follows:
The General theory test is 25 questions and one must answer 19 questions correctly to pass. The 13 wpm CW test is 10 questions and one must get 7 answers correct to pass that test element. If we combine the two tests (for a total of 35 questions) and if the test taker scores a total of 26 answers correctly, then he or she passes, regardless of the individual number of incorrect answers on the CW test.

While I haven't shown the numbers, the same scoring process could be applied to the 40 question Extra class test.

Doing this would retain the same overall test methods (only the scoring process would change), no additional record keeping should be required nor would any CSCE be issued for anything that isn't issued today. More importantly, an immediate benefit of this approach is that if someone chooses to not pursue the 13 or 20 wpm level of CW, they MUST get a greater percentage of the Theory element correct in order to obtain an overall passing score. That automatically raises the difficulty level of the theory test for those people that might wish to ignore learning CW at those speeds, which is something many have desired to see happen if any change is made regarding a lowering or elimination of CW requirements.

Worst case scenario for someone taking the General test who didn't attempt to learn any CW beyond 5 WPM: Even if they just filled in answer B for all 10 CW questions, they might luck out and get 3 of the CW questions correct anyway. That being the case, they'd then need to correctly answer 23 of 25 theory questions (92%) to have a total of 26 correct answers to pass the test on a combined score basis.

In summary, I think this suggestion meets the concerns of many hams because:
1. It retains all existing levels of CW testing,
2. It maintains full compliance with International treaties,
3. It makes no changes to the test elements themselves,
4. It improves the theory difficulty for people that ignored CW,
5. It would be an easy to implement process if approved by the FCC and
6. It provides a middle ground solution for an ever increasing area of

internal debate among hams.

Note, I have not suggested merging the 5 wpm test at this time because that minimal level of CW testing must be retained for compliance with international treaty. If, in the future, the international requirement goes away, then merging the 5 wpm testing might also be considered.

Hi Clint - Please don't believe that those 5000 calls would go unanswered without the Tech- license. Coded hams have been answering calls for help since 1920. One of the reasons we've lasted 80-some years is due to hams *always* answering the call for help. The government realized this very early on.

>American Red Cross work in the Southern California region occasionally
>involves Amateur Bands...with no Morse code used.

In SoCal comms can be carried out on VHF rptrs. No one uses code on rptrs so your point is moot. But, if a disaster were widespread enough to necessitate the use of HF, and I offered the ARC the services of a CW net as a backup to SSB and digital, do you believe they would refuse the offer?

>The Military Amateur Radio Service has seen fit to do away with
>Morse code requirements.

Different missions:
We ragchew, the military doesn't.
We build our own radios, the military doesn't.
We build rptrs that duplicate coverage of other rptrs just for ego sake, the military doesn't.
We have DXpeditions, the military doesn't.
We have on-air contests, the military doesn't.
We have swap meets, the military doesn't.
We mainly use SSB on HF, the military doesn't.
We have antenna measuring contests, the military doesn't.
We try to break microwave distance records, the military doesn't.
We have to be licensed to operate, the military doesn't.
We work moonbounce and meteor scatter just for fun, the military doesn't.
et et et et cetera...

If you want to be like a military radioman, enlist!

>I do not see my "Technician" Amateur Radio License as an "entry-level"
>license...I see it as an extension of my public service work - a
>functional tool with which to communicate.

Don't forget the five charter items listed in S97.1; public service is only one of the five things we should be attempting to participate in. We're also encouraged to be building and enhancing international goodwill (workin' DX!).

>And plain English does the trick 100% of the time.

Did you know many Florida public safety agencies (fire, lifeguard, police) use Q-signals?

5980. Need help with Ranger 2 problem

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-17 00:00:00 UTC
From: toneri@ils.net
Message-ID: <5gi9k1$k@nr1.toronto.istar.net>
Source record: 202314

HELP! I need some expert help and advice on a problem with my Johnson Ranger 2.
The VFO does not seem to cut off completely and produces a very rough sounding, wide signal (120 Hz buzz) when not being keyed. Could this be caused by a faulty filter cap in the bisa supply? The bias for the VFO, keyer tube and the modulator comes from a pair of taps on the LV power transformer, to a full wave rectifier (6AL5), and a pair of 15 mfd electrolytics. The question I have for all the fine BA experts out there is: If the bias electrolytics have failed, allowing a high level of AC ripple on the bias voltage, could this be causing the keyer circuit to cause the VFO to be only partially cutoff at the rate of 120 HZ?
I have no equipment for checking the level of ripple on the bias supply and my FET type VTVM is not good for checking electrolytics.
Any ideas or help would be appreciated.

> 73 Dean W5GXL
>

The path loss formula

LdB = 32.45 + 20 log(freq) + 20 log (distance)

just gives the ratio how much the signal is "attenuated", so you do
not plug any power into this formula.

To calculate the received power

Rx power in dBm = Tx power in dBm + Gtx - LdB + Grx

where

Gtx is transmitter antenna gain relative to
an isotropic radiator in dB (dBi)

Grx is the receiver antenna gain relative to
an isotropic radiator in dB (dBi)

Transmit power in decibels relative to 1 W (dBW) is

10 log (Tx power in watts)

and to get the power relative to 1 mW (dBm) is

10 log (Tx power in milliwatt) =
10 log (Tx power in watts * 1000) =
10 log (Tx power in watts) + 30

Thus 20 W is +43 dBm.

Now calculating the received power at a satellite at 1600 km distance
and 145 MHz assuming dipoles (G = 2 dB) at both ends:

The path loss is 32.45 + 20 log (145) + 20 log (1600) = 140 dB

Rx power in dBm is 47 dBm + 2 dB - 140 dB + 2 dB = -89 dBm which is
about 8 uV into 50 ohms, which should be sufficient for most modes and
most receivers (provided that the background noise from the earth or
from the sky does not swamp the signal).

Are you suggesting that the number of questions asked in one session
to be dropped to one third of the current number :-).

Seriously, do you know how hard it is to invent meaningful questions
for the question pool ? Generating three times as many questions than
to day from a limited range of subjects will no doubt lower the
average quality of the questions. Some of the distractors in the US
question pools are jokes and not true distractors and tripling the
number of questions would just increase the percentage of bad
distractors.

>be eliminated as a testing element.

Ah yes, theory is soooooooo inconvenient. It makes a "good"
operator do things he'd just as soon not do. Like:

* Having to buy a decent non-inductive 50 ohm dummy load of
an appropriate power dissipation, rather than just going to
Radio Shack and picking up a 10 cent 1/4 watt 50 ohm resistor
for his Yaesu. After all 50 ohms is 50 ohms, isn't it? What
is an ohm anyway?

* Having to actually measure an antenna and tune it up rather
than throwing out any old piece of wire anywhere he'd like.
After all he paid good money for a 1KW linear, so what if the
antenna gets a little hot or the plate is starting to radiate
X-rays, he's still getting a few watts out.

* Paying attention to proper grounding, when he'd just as
soon say, "I don't need no steeenking ground wire" or even
"what's a ground wire?".

* Paying attention to his frequency, for that matter. After
all "frequency" is a theory word. Don't even bother mentioning
harmonics, spurious emissions, intermodulation, distortion.
It takes too much theory to understand those.

* Having to acknowledge that *technical* hams developed
AM rigs, then SSB rigs, then FM rigs, so that all hams could
actually communicate the way they do in every day conversation
and transmit voice and emotion. Whereas, otherwise, they might
have had to wait another decade or two or more for those stodgy
commercial firms to figure out that there was a market for more
than just fine conservative CW rigs.

* Having to face up to the fact that he is paying someone else
dollars to make up for the expertise he lacks and he can't even
be sure that he got his money's worth because he doesn't know
a bit of theory.

Tell you what, let's stuff the six license classes down to
2 licenses; Operator and New Technician.

Operator has to pass 20WPM (it should really be 25WPM since
that is just warming up for a "real" operator and 25 WPM is what
is expected of a 1st class Radiotelegrapher, but we'll leave
it at 20WPM and hope that the "real" operators will be gentle
with the 20WPM beginners), rules, but no theory. (We will
have to reword the rules questions to use 3rd grade terminology
since some of them depend on nasty theory words). Operators
cannot build their equipment and must buy and use type-certified
gear, since they were not tested on theory after all. Also
Operators will be assigned an arbitrary 1 hour period on a weekly
basis for personal emergency frequency monitoring on 500 KHz and
2182 KHz (correct me if those frequencies are wrong, I'm going
from memory), so that Operator hams actually stand a chance
of monitoring a frequency on which a Morse SOS might someday
occur now that the Coast Guard no longer cares to provide that
service, but Morse advocates insist that was a mistake.

New Technician has to pass written up through Extra theory and
rules. They get to be assigned 1 hour per week also on 121.5 MHz
and 243.0 MHz, but they can substitute automated alarm stations of
their own construction at their option, since they are qualified
ham band experimenters on passing the test.

Split the ham bands right down the middle from HF through
microwave. That way if you believe that only CW operators are
polite enough to talk to each other, you won't have to get your
key or mike dirty working a New Technician. And despite the
testing criteria, either class can use any legal mode; after all
the Operator will be relying on the type certification to stay
legal. A ham that wants to work both class bands can be qualified
as both an Operator and a New Technician by passing both tests.
Current Extras would receive both classes. All others could
operate in the currently allowed segments of the O/NT bands of
their choice for a period of 3 years after which they should have
upgraded to either O or NT or both. Each class can determine if
it is appropriate to establish a single new entry level license
for their class and will set the critieria and privileges
without regard to the requirements of the other class.

In 10 years, the class that is more populated with *fully*
qualified hams under their separate class criteria and has
reported more emergency calls gets the other class' bands. In
other words the requirements for the successful class prevails
over the unified bands and the losers must meet the other class
requirements, if they have not already done so, to retain
privileges.

You know, this was started tongue-in-cheek. But it actually
sounds intriguing. How about it?

Interesting site, Lee...I had to laugh. You should try joining some of the BIGGER clubs in the RDU/RTP area if you REALLY want frustration. Due to this frustration, I joined the Franklin County Amateur Radio Club (FCARC) which also sponsors the KD4MYE 145.11 repeater. It is a small club with under 40 members, but we provide the following:

- Full service ARES. Our club was instrumental to Franklin County Emergency Services when all of their telephone and other communications between their 911 Center and Police/Fire Department failed during Hurricane Fran. We have weekly nets and other field activities including a propagation test which determined exactly what kind of communications equipment and accessories would be needed to cover all major emergency facilities throughout Franklin County. Unfortunately, our ARRL NC Section Manager has failed to nominate an Emergency Coordinator for our county, but that has not stopped our work. David Faircloth, KD4WSC is our Acting EC. Two major events (a hurricane and a tornado) in '96 were both handled in a positive, professional manner. Oh, and we didn't have to PLEAD to get our members to help like other area clubs did, they all stepped up to the plate (if they could).

- Repeater communications. The 145.11 repeater has coverage to nearly the Virginia border and as far south as Cary (IF you consider Cary to be in the South, that is). The phone patch is free and open, but of course we appreciate membership too ($25).

- Field Day. In '97 we again met at Roger Allen, KD4MYE's property in Wake Forest, also home of the 145.11 repeater. A joint effort by two clubs (Triangle East ARA and FCARC), we attracted over 200 individuals to the site, including family members and plain old strangers curious about the Service. It helped that we offered a 2-pig pig-picking eating fest which last year was FREE. By the way, we operated 3A and logged about 1,300 contacts, many of them CW, all on an extensive emergency power system. This year we will have a stronger accent on CW and will have even more emergency power than before since nearly all club members now own their own generator set. How about THAT, sports fans!

- VE testing. We have a VERY active ARRL VE testing group led by club member and treasurer Terry Murphy, NN4NN which meets every month, alternating between sites in Wake Forest and Franklinton. In fact, it has been fun watching club members upgrade so they can become VEs, too.

That's motivational involvement.

- Authors. We have a famous author in our midsts as well, Sandy Hope, AE4WL. Sandy had an article published in QST a few months back about how she upgraded to extra, and her involvement with her husband (Jim, K4YTE) and his family of hams. Sandy also runs the Wake Forest book store called "Not Just for Kids" and stocks good quantities of ham related texts and magazines for the Wake and Franklin County areas.

- YL group. Led by Kelly Britton, KE4ITE this group meets monthly. We have a nice group of ladies which meet in Wake Forest for a leisurely bagel breakfast on Saturday mornings.

Oh, and by the way, all of our equipment is state of the art, and resides on a club member's personal property. We might not have an antenna at 1600 feet, but we also don't have a dubious honor of awarding a "Lid of the Month" award. We push family involvement, and almost all members are husband/wife/kid teams. Most of us are professionals working in computers, RF, finance, or as in my case, microwave.

If you need to join a good club, give us a shot. Just because the others are bigger or have a higher 2m antenna doesn't make them a good club. Involvement of the members and cooperation do! Maybe we will see you at the Raleigh Hamfest.

Does anybody know where or how I can get hold of a DL-36 valve for a radio I built in December 1953?? The radio was built from a kitset package marketed as lamphouse 1. (I lost it years ago in a houseshift).

If not, then maybe an alternative modern replacement valve?

Please reply to Author.

Cheers, Geoff

As I was doing one of those hour and a half drives down the road again,
I got to thinking deeply about no code. At first I thought to myself,
I had to go though it. So shutup and pay ones dues. Then a wave of
thought hit me. This happens so little these days. Can amateur radio
learn from the military. After all the military learned from us a few
times in our history.

I came up with the thought what about "time in grade". Im due for
promotion soon, I think thats why I was thinking about it. Someone
would take a test. Not just any test but a REAL test. Leave the
answers locked up until gradeing time type of test. Cover many of the
same topics covered now, with some added topics such as packet radio.

The first test for a novice license would be 125 questions. 100 would
be multiple guess, 25 would be draw the schematic symbols type of
thing. Draw a simple RCL or full wave bridge. A score of 70% on the 25
question part would be required to pass. A score of 75% would be
required to pass the multiple choice part. The novice license would be
automaticlly upgraded to Tech after 24 months (2 years). The Tech
license will expire 5 years after issue should one not be able to
upgrade. If one can not upgrade, one will have to retest for a
novice class license again. Failure to upgrade to general would
"loop" a person in this process. The current band plan will remain in

effect for each license.

The second test would be for general class. It would be 200 questions of a more complex nature. 150 questions will be multiple choice and 50 questions will be "fill in the blank". A score of 80% would be required to pass the multiple choice, a score of 85% would be required to pass the "fill in the blank". questions. The general class license would be upgraded automaticlly after 24 months (2 years) to advanced. The general/advanced license does not expire. Once advanced is awarded it will be good for life. Again, the current band plan will remain in effect.

The third test would be for extra class. Extra class will be the people that issue the tests. This test would be geared towrds the testing aspect and would be 50 multiple choice questions. A passing score will be 95%. Again, the current band plan will remain in effect.

- Study material for each test will be FCC issued. To obtain the materials a letter of request will be required.

- Study material for each test will fall under the standard government test compromise rules. In short, one is bound not to say what was in or on the test or study material.

- A CDROM will be issued to each testing group. This CDROM will have the question pool for each test. A program that will randomly select each question for each test will be used.

Just tossing some ideas around. More like passing time as I drove from eddies hole to L.A. for a taste of real life agian. I really like the time in grade license upgrade idea. That way everyone gets a shot at all of the bands in a very short time. Same as now, the faster one passes the tests the faster the upgrade. But, if someone is challenged in the brain department one can still have a shot at being a ham.

Yes. It's been around for about 25 years. It was designed for tv antennas and intended to be used instead of coax where a balanced feedline was desired. It's impedance is 300 ohms. Loss is greater than cheap twin lead but less than coax especially if you add in the losses from baluns which are necessary at each end of coax. It can be run over power lines, next to metal gutters or even on the ground. It is not satisfactory for transmitting purposes.

5997. Code is a bridge between languages. CW isn't the problem with HR.

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-18 00:00:00 UTC
From: Len Umina <umina@ultranet.com>
Message-ID: <01bc335f$bc9dd020$0b647392@kirk.ultranet.com>
Source record: 202179

I've been using Morse Code to talk to people who don't speak English for about 30 years now, and I have to say, after thousands of QSO's I wouldn't have missed one minute of it.

Sure, CW wasn't easy to learn, but even today it remains my primary bridge to hams who don't speak English. With Morse Code I can talk to people in Russia, China, Africa, Japan, India etc...

Using CW and Q Signals, as well as common abbreviations, I can exchange information about the rig, the operator, the weather, and pass greetings and best wishes to virtually anyone, anywhere.

Sure, we're not going to discuss the meaning of life or ponder the cosmos, but we are going to make friends and wonder about each other. We are going to know a little more about each other than we did before and we are going to feel the bond that has tied hams together since radio began.

One important societal impact of ham radio is international good will - not just for the rich who speak English and run 100 watts from their $1500 station, but for everyone, including the 5W peanut whistle that a student in Brazil just built from his part time job's income.

Without CW as a major component of skill among hams, much of the bonding between us would quickly dissapear with disasterous results. Let's not forget that many of the countries sporting hams with low power CW transmitters also participate in the international allocation conferences too.

In the United States we think that Ham Radio is dying, but just the opposite is true. What's happened here and in most other countries to the demographics is a consequence of several major factors, all of which are beyond our control.

For example, the baby boom modulation of the population is an issue.

The effect of abortion since 1973 has dramatically effected the number of young hams entering the hobby. (ie we're missing 40 million middle class young adults according to the statistics. These are those from the group that could afford the hobby, and if they as a group were hams by the same percentage as the current middle class the ARRL wouldn't be having a budget problem.)

Then there's the rise of feminism and the destruction of the nuclear family. No longer just a prediction, it's a fact. How many kids would like to have a ham station but can't even afford the books let alone the room for the antenna and the rig because they come from broken homes? Well, about 1/2 of the population fits in that category today.

I could not imagine getting into Amateur Radio as a teenager without the help I received from both of my parents who worked to see that we had a home with a yard (which I used for antennas of course) and who had the income to "assist" me with some of the larger purchases I "needed". How many kids have that support system today? It's no longer the majority.

Amateur Radio is alive and well. What's happening to it is being driven by the social engineering failures that we've come to accept as status quo.

If we got rid of CW thisafternoon it wouldn't make one bit of difference in the hobby, other than potentially crowding some of the voice bands for a short period of time.

To build this hobby into a strong component of our society and realize the benefit it has to offer to our posterity we've got to put together programs that compensate for the environment that many of our young people find themselves in. It can't be done with government programs or by eliminating CW. It can only be done 1 on 1. If you don't think kids today are interested in Amateur Radio you haven't tried exposing them to it. What stops them is their support system or lack thereof.

Nothing will bring back the 40 million missing from the Novice pool, but if we get involved with those who are living without the support system required to get into the hobby we can turn this thing around big time.

I suggest offering your "old" walkie to any kid that gets a license for free. How about that old HF rig? I've done this and it works. These are the barriers that most youngsters face. Don't let the stuff sit in your basement until you're a silent key and then have the XYL dump it!

Give away a subscription to QST or CQ or 73. It's the cost of a couple of pizzas in most parts of the country. Imagine the dreams this could start in a young mind. A few bucks and you might not only start a youngster on the road to ham radio, you might encourage a new engineer or keep someone from the gangs or drugs. It's probably more effective than any government program and costs far less!

No one can fix it all, but if we all take a little piece it just might make 3db of difference, and sooner or later someone is bound to notice it!

73,
Len

Source record: 202187

I have a ft-530 purchased in Australia, therefore possibly set up with different jumper settings. I have removed jumper 13, and reinstalled 15. I've tried the arrows on powerup, as well as letting the unit discharge before reapplying power. The unit will still not transmit above 450MHz, however it will RX up to 500MHz and down to 420MHz. It will also RX up to 174, but not below 130. It will also do the 900 range. My thoughts are that it has other jumpers setup differently. My unit has jumpers 3 and now 15 closed, all others open. If anyone can help, please let me know the jumper config as standard in the US.

Thanks, Jason Wiebe

Check out The Station Program

http://www.amsat.bm

The Station Program Version 1.0h

The Station Program is a complete ground-station control program, for
Windows 3.1, WFW 3.11 & Windows 95. It is optimized for the analog birds,
and is not the same as WiSP!

This product is in continual development, upgrades will be made available
at regular intervals. The latest version and/or patches can be
downloaded from the AMSAT-BDA web site.
Specifications

Minimum System Requirements:

Personal computer with a 386DX or higher processor (486DX or higher
recommended), running Microsoft Windows 3.1, Microsoft Windows for
Workgroups 3.11 or Microsoft Windows 95 operating system. 6 MB of memory
(RAM); 8 MB recommended on Windows 95.

Rotators supported:

Kansas City Tracker
AEA ST-1 (not Windows 95)
TrakBox
DDE controlled home-brew rotators
EasyComm 1 controlled home-brew rotators (under development)
EasyComm 2 controlled home-brew rotators (under development)

Radios supported:

Icom CI-V (via CT-17) Radios - All
Icom CI-IV (via CT-17/UX-14) Radios - All

Kenwood TS-790 (under development)
Other Kenwood (via IF-232) radios (under development)
Yaesu FT-736R

Other Features:

PLAN13 Orbital Model
Unlimited number of satellites in database
Multiple Tracking Consoles open at one time (limited by computers memory & speed)
Automatic Doppler Correction for Beacons
Automatic Doppler Correction for Full-Duplex
Automatic setting of both TX and RX modes & frequencies on radios
Computer calculates corresponding frequency as you turn radio dial (not FT-736R)
Calculates AOS/LOS times
Audible alarms can be set for countdown to AOS and/or LOS (requires sound card)
Sun+s Longitude & Latitude
Sun+s Azimuth & Elevation (useful for aligning rotators)
Longitude & Latitude of Sub-Satellite-Point
Satellite Altitude
Satellite Mean-Anomaly(0-360)/Phase(0-256) - User Defined
Satellite+s Illumination % - Different calculations for tumbling/2 Axis/3 Axis stabilization
Satellite+s operating mode (derived from Schedule, and not limited to 1 character)
Observer+s squint angle - Different calculations for tumbling/2 Axis/3 Axis stabilization
Azimuth & Elevation of satellite from observer
Range of satellite from observer
Delay or Echo time of round trip signal
Transverters/Receive Converters fully supported on all bands
Extensive satellite reference included
Automatic capture of telemetry from COM: port to file at AOS/LOS
Visibility at a glance screen
Visibility prediction reports - 3 types
Very easy to use interface
No need to remember any numbers or do any calculations
Maidenhead locator calculator
Delta-Time feature allows you to fast forward/rewind time to check future/past footprints etc.
Total-Doppler-Correction, satellite transponder frequencies fixed, ground varies - the mode for 3D!
All proceeds donated to the Phase 3D Fund

I stated the belief that Mexico had only one license class.
Apparently that is at least no longer correct ... I am uncertain
if this is new or not ... Mexico recently made major revisions
in its' communications regulations, including the privatization o
many communications services and bands that were formerly
government monopolies.

Much of this was done to align Mexican regulations
with US and Canadian regulations along with the trade
changes introduced by NAFTA ...

When I was in Mexico, a US op with ANY license class could
get a full-privelege reciprocal license, there were no formally
mandated sub-band restrictions, and I was told that there was
only one class of license ... perhaps, they meant for foreigners,
which was clearly the case, but my distinct impression was that
there was only one class, period, even in the permanent licenses
issued to Mexican citizens.

If that has changed, I would view it as an unfortunate byproduct
of NAFTA ...

Woody <rafman@kerrlake.com> writes:

> How suprising. Mexico has (1) one license, Amateur Radio license.

Does this mean Mexico has 1 class of license? If so, why does the FMRE web page have this in the rules section?

ARTICULO 7o.- Los cuestionarios de los ex�menes ser�n formulados por la Secretar�a y ser�n elaborados conforme a la categor�a del certificado de que se trate y versar�n sobre las materias siguientes:

a).- T�cnicas.- Conocimientos generales sobre electrodin�mica y radio comunicaciones.

b).- Legislativas.- Conocimientos generales sobre la Ley de V�as generales de comunicaci�n y Reglamento de Radiocomunicaciones de la Uni�n Internacional de Telecomunicaciones, aplicables al Servicio de Aficionados, as� como el presente Reglamento.

c).- Telegraf�a.- Aptitud para transmitir a mano y recibir a o�do se�ales de C�digo Morse Internacional, en pruebas de cinco minutos cada una, en lenguaje claro, a las velocidades que a continuaci�n se indican:

AFICIONADO CLASE I. 10 palabras por minuto.

AFICIONADO CLASE II. 7 palabras por minuto.

AFICIONADO NOVATO. Exento

AFICIONADO RESTRINGIDO. Exento.

That's 4 classes. And from the appendix:

CERTIFICADO

CLASE I A1A, A2A, F3E 1250 Watts (media)
R3E, H3E, J3E, J2B, 1250 Watts (PCE)
En las bandas superiores a 144 Mhz.
A3F, F1C, F3C, C3F 500 Watts (media)
R3C, 500 Watts (PCE)

CLASE II A1A, A2A, F3E, 500 Watts (media)
R3E, H3E, J2B, J3E, 500 Watts (PCE)
En las bandas superiores a 144 Mhz.
A3E, F1C, F3E, C3F, 200 Watts (media)
R3C, 200 Watts (PCE)

* NOVATO A1A, A2A, 150 Watts (media)
J3E 150 Watts (PCE)
F3E, 45 Watts (media)

*RESTRINGIDO A3E, 50 Watts (media)
J3E 50 Watts (PCE)
F3E, 45 Watts (media)

* Categor&#65533;a autorizada para operar exclusivamente en la banda de 7,050 a 7,100 Mhz. y en la banda de 144 a 148 para radiotelefon&#65533;a; y en la banda de 7,000 a 7,050 con la modalidad de telegraf&#65533;a.

PCE Significa potencia en la cresta de la envolvente.

It would seem from this that the no-code licenses are highly restricted, too.

6017. icom ic-255a 2 meter radio help needed!

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-18 00:00:00 UTC
From: James Pollock <pollojv@thewolforganization.com>
Message-ID: <01bc33ca$872090c0$f50210ac@pollojv.net-works.tni>
Source record: 202199

Hi,

I just bought an Icom ic-255a (used) 2 meter transciever.

I'm looking for information, reviews of the radio and information on installing the PL Tone accessory. There is a button you can push for TS tones if you have the optional tone upgrade..and I'm assuming it's for a pl tone generator. I just got my tech license, so I don't know that much about which I speak :).

Help please!

I have an alinco dr-600 dual band mobile. The documentation says that you can remote control the radio on either 2m or 440mhz. Well the 2m side works fine when remoting from an ht but the 440mhz side won't. The rig has been to alinco repair and they said that there wasn't anything wrong. Any help would be appreciated. AmSoft announces the 1997 release of "The World of Ham Radio
CD-ROM.
The World of Ham Radio contains the World's largest collection
of amateur radio software, and the most recent FCC amateur radio
license database available anywhere. Track all US and Foreign
Licensees authorized to operate by the FCC. More than 1,000,00
callsigns are found in seconds with this CD-ROM. The current
database includes calls issued up to 14 January 1997. Find hams
by full or partial call sign, prior call sign, last name, first
name, State, City or zip codes. Create your mailing lists or just
print single labels from this FCC Callsign database program.
DOS, Windows 3.x, and *Windows 95 compatible lookups on this
CD-ROM.
Every issue comes with the AmCall auto-logging station logbook
which uses this callsign database. Compatible with most other
amateur radio software packages available today. Also includes
all the "Vanity Flood Gate assignments, plus the missing 3,500
"Vanity Assignment still Available" calls.

There are over 2150 amateur radio modification files included on
this CD-ROM logically arranged by manufacturer, and model number.
That's over 800 new mods since our last issue.

This CD-ROM is non invasive to your drives, this means no hard
drive usage unless you decide to use it.

A Complete user interface "CDVIEW" for the Ham Radio Software
library eliminates the need for you to use DOS commands and
hard drive space. CDVIEW includes Instant online help and
program documentation by pressing the (I) key on your keyboard.
CDVIEW will make it very easy for you to move through and
operate
the massive 20,000+ file compilation. These files could easily fill
822+ Megabytes of space if they were not on this convenient

CD-ROM.
Users can preview new ham software directly on the CD-ROM
without
requiring a hard drive, many of the software programs run directly
from the CD-ROM. You can use the CD-ROM to place files onto
removable diskettes, or to install files onto your computer.

For more information visit: http://hamster.ivey.uwo.ca/~amsoft/
or contact AmSoft direct from the information at the top of this
notice.

>and 73's

The Mod works, it's just that the TS50 doesn't have enough surface area to dispose of all the heat. Besides, it only puts out 200 watts. I've seldom been on HF when I couldn't be adequately heard at 50 watts if I could also be heard at 200 watts. The best mods for the TS50 are those which turn down the low power setting to QRP levels. While it isn't a good rig to operate with a battery, it does QRP ssb & cw nicely.

Fortunately for most people, they use it either or cw or ssb, with such a mod from a vehicle battery or from a power supply. Most of them don't have 45 Amp or so power supplies so they don't really ruin their rigs with the mod. They will eventually ruin their output transistors as the heat has no where to go even with the fan running. In fact, take a bird meter with at least a 50 watt dummy load, and repeatedly send a message on cw into the dummy load. Test de <callsign> works rather well, then note that after about 3 minutes, the heat sink literally can be too hot to touch. It's a nice rig, I have mine, and it's good for HF, but 200 watts or so from it, is asking too much of the design. One other point, the molex connectors on the power connection are only rated at about 12 amps. There are two in parallel for the negative and positive leads, so that would imply 24 amps maximum. Some should try checking the condition of those connectors after operation at 40 amps input power to get 200 watts output. It's not a good idea, and frankly, producing a rig whose output transistors can put out considerably more power than they're regularly called upon to do, is a very good idea, but pushing them to the limit isn't. 73 de n8blk/3

What is the mod? I have a ts60 and wonder how it would work with that
rig. Did you say that you have done it and it works? That extra power
on VHF would be quite substantial...

6029. Russian operating for US no-code tech

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-18 00:00:00 UTC
From: "Bruce J. Bergen" <bbergen@xmission.com>
Message-ID: <332EFAE5.2908@xmission.com>
Source record: 202211

Greetings,

I have a son, Anthony, KB7WMD, who holds a US Technician Class Licence (so called "No Code Technician" Licence). He will be traveling to Novosibirsk, Russia, where he will be staying for approximately two years. My questions are as follows:

1- Is there an equivalant class licence in Russia today? That is "no Code Technician" - VHF and UHF only?

2- Do the Russian VHF and UHF repeaters use or require a 1750 Hz (+-25 HZ) tone burst of about 300 ms to open the repeater as do many european machines?

3- I have the address for the Ministry of Communications in Moscow. Is this the appropriate agency for him to obtain permission to operate - and to bring the appropriate equipment, a handi-talkie, into the country with him?

4- I assume the 2 - Meter Band Plan for the ITU Region 1 would apply to this area of Russia.

Any authorative information you can provide would be very much appreciated. We have until about May 26, 1997 to make all of these arrangements.

73 Bruce - KI7OM

Source record: 202214

How about better testing.

I just overheard a Extra Class Talking on a HUGH linked repeater system on 2 meters. His ant. was a 80 foot long wire feed by almost 60 feet of RJ-58. He found it amazing his HT connected to this could talk so far (He was in Cleveland, I am in Columbus Ohio). He could not understand how I found it amazing he was not smoking his finals, stating "Well it must be working well otherwise I would not be able to talk to you in Columbus". The Repeater receiver he was hitting was only a mile away from him.

After I gave up talking to such an educated Code trained radioman an Advanced Ticketed radioman started talking to him and was wondering if he noticed his Signal strength meter changing as he went to low power.

DitDitDit and Duuuuuuh that one.

There are some real intelligent people and there are some real idiots on the air and I really do not see how knowing Dits and Dahs weeds out the idiots.

I see periodic postings on rec.radio.info regarding a group using
standard FM broadcast band receivers to detect passing meteors;
apparently a meteor causes a temporary ionized trail that enables
very distant FM stations to be briefly heard, and also causes
a popping sound. That might be one inexpensive avenue into astronomy
via radio.

>> Nope. We're members of the Amateur Radio Service, not the Amateur
>> Computer Service.

>It would be interesting to know how many processor chips you radio has in
>it.

None.

>Did you build it or purchase it as an appliance?

More than half my transmitters were built myself from scratch. A favorite pastime of mine is stripping old TV sets and using the components for home-built transmitters.*

>Can you maintain and repair it?

Since I built them from scratch I can certainly maintain and repair them.

>Do you understand all the logic operating within the case?

Most of them don't have a case - just an open chassis. Great conversation pieces! Heck, some are mounted on pieces of wood with copper tacks as solder joints. When I get on the air the other op can't tell if it's one of your microprocessor-controlled rigs or a breadboard rig (except the VFO does a little jump if you cough too hard on it).

>That is why we are AMATEUR OPERATORS... using modern comm. equipment.

Oh, I see (or as Jim would say, "O, I C"). I'll pit your modern comm equipment against anything I've built. Bet they will sound the same on the air.

>Not to belittle anyone, just stating the facts. (as I see them)

Okay.

>William Lee N5WRX (general class and proud of it)

73,
Jeff KH2PZ

*Those not built from scratch consist of an HW-16 which I'm rebuilding due to bad assembly by it's original builder, and a Galaxy GT-550 which is easy to maintain and repair.

Courtesy tones are especially good when you're in a QSO but not paying
any attention. When you hear the "blee-bloop," you know its your turn
to say, "Ahhhh - Rig here is a Ya-Com-Wood with a triband Cush-Comet at
35 feet AGL, 545 feet MSL..."

>73, Fred......

Oh Fred, ya big silly! Nature abhors any attempt at connecting two male PL-259s together. They were designed to mate with SO-239s, although 2-4% of amateurs attempt otherwise, sometimes with deadly results.

>Anyone have a manual to sell?
>Keith VO1AE

Hi Keith - My 202 and manual are 2500 miles away but from memory:
xmit: F/12
rcv: (F - 10.7)/3

The rig should have come with at least 146.94 xtals for simplex
unless someone yanked them out. If they're still in there check
to see if you can hear the 12 MHz fundamental with an HF rcvr
while transmitting just to insure the F/12 formula is correct.

You can order the receive xtals from RadioShack for $4.95 (might be
$5.95 now). But if you're in VO1-land, then maybe not...

Hi Dale,

1. I guess you don't know how to use a kill file despite your previous assertions. Another exageration perhaps?

2. Ooops you number 1 to 3 well sometimes I do that too.

3. Are you learning more than one code?

4. Reviewing Dejanews I can't see where your answer was rejected. Perhaps your refusal to participate indicates a lack of compassion or just simply a lack of knowledge.

Your refusal to try and help other dyslexics speaks volumes about your character and cast a bit of doubt on your claims of expertise in the area. I still would like to try and help people like Ian but perhaps you are better served by flaming rather than thinking.

Adios Jerry

wesuser (wesuser@wesleyan.edu) wrote:
: Looking for information on setting up a radio telescope.

You might have better luck over at the amateur astronomy
groups.

The only articles I have ever come across over the years
have been using commercial vhf equipment and homemade
parabolic dishes and only to listen in on the Sun and
plotting signal amplitude vs. time on an X-Y plotter.

And this with low noise vhf/uhf stuff.

I can't imagine what it would take for Joe Sixpack
to even start listening to deep space objects, let
alone develop or buy software to convert to
visual images.

Probably better stick to bass fishing or bowling. :-)

Its far less expensive. But then again, you might be
a rich guy with lots of acreage. In that case, I envy
you. I tried listening to the sun once but I found
that I really needed a good sized dish. Depending
on your circumstances, you might be able to use
someone's older full size sat dish.

Good luck!

Amsat-NA is in need of donations to help complete and launch Phase 3D. Last report says we need to raise over $150,000. Launch date is only a few months away so we haven't much time. You're fooling yourselves if you believe that the money will magically appear come launch day or that someone else will donate the needed funds. I don't want to see Amsat bankrupt itself in the name of Phase 3D.

If 150 of us will call Martha at (301) 589-6062 and each donate $1,000 then we can be assured Phase 3D will be riding on the ESA rocket and not a cement weight.(cement looks good on the ground, not in space)

If 300 of us will call Martha at (301) 589-6062 and each donate $500 then we'll be able to enjoy the sounds from Phase 3D's transponders as it passes high over head.(I can almost hear it now)

If 600 of us would just call Martha at (301) 589-6062 and each donate $250 then we would have an excellent tool to use for recuiting new members into the greatest organization amateur radio has ever known: AMSAT.

If you have made a pledge to donate to the Phase 3D project and have not keep it, Martha is impatiently waiting to hear from you at (301) 589-6062.

If you have never donated to Phase 3D, you can put an end to that retched feeling of guilt in your guts by sending a donation to Martha at 850 Sligo Ave., Suite 600, Silver Spring, MD. 20910-4703

If you have never heard of Phase 3D, check out: http://www.amsat.org
then call Martha at (301) 589-6062 and donate.

Did I mention that Martha likes to sign up new members too? If you're reading this and are not an Amsat member... Shame Shame Shame. Call Martha and sign up today, you'll sleep better for it.

If you live some place other than North America, send your Phase 3D donation to your local Amsat Organization(They all need project funds).

6049. Yaesu 890 AT Compact HF Rig $900.00

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-18 00:00:00 UTC
From: don.peaslee@ncn.net
Message-ID: <332dfdae.8386207@news.netins.net>
Source record: 202273

Yaesu FT-890 AT Compact HF Rig with built in Automatic Tuner.
Extremely light use. Approximately 30 total contacts is total usage.
In perfect shape, like brand new with all the original boxes and
packing.

100 watts power on all HF bands. IF shift and IF notch filter. Four
microprocessors provide the easiest possible control interface. Two
independent VFOs for each band (20 total) hold their own frequencies
and modes as well as clarifier offsets and repeater shifts. 32
memories store data for the VFOs giving a total of 84 independent sets
of frequency, mode and other selections. Noise blanker, all mode
squelch, 4 function multimeter, and AF speech compressor with
adjustable IF passband shift. Iambic memory keyer for CW with dot-dash
memory.

Top panel heatsink allows this radio to run cool at all times and with
an internally switched fan, it allows full transmitter output without
any rear panel protrusions.

Add CAT control to hook this fine radio up to your computer.

Perfect shape and like brand new. $900.00, buyer to pay shiipping.

Uh, Jim? Can I ask you some questions?

This programs looks pretty good and so does "your" website, but can't you just say it's YOURS, rather than referring to it as "they" and saying "I found"?

It looks like you probably have a good product, and if people are interested, they should check it out; but this seems a little dishonest to me. Wouldn't you get better responses by saying that it is your website and this is your program? Or how about get somebody to independantly review it and post their comments?

(BTW, you know just a little bit TOO much about the product to be an outsider, and a little check of the website confirmed that your address is listed under the "Contact Us" button. And secondly, SHAREWARE isn't exactly free, now is it...?)

Good luck with your product.

So you only build completely stupid equipment that depends
entirely on "operator skill" ... that's quaint, but it sure doesn't
do much for advancing any skills ... once you've learned how
to solder well and stuff parts on a board, there's not a hell of
a lot of "advanced" things to be done with simple a simple CW
transmitter.

> >Did you build it or purchase it as an appliance?
>
> More than half my transmitters were built myself from scratch. A favorite

> pastime of mine is stripping old TV sets and using the components for
home-
> built transmitters.*

Again, it appears that you only build simple transmitter strips ...
now that's fine, but without a receiver you're sort of wasting
your time, right?

As has been pointed out, receivers are generally more tricky
than simple CW transmitters ... however, just as it's no big leap
to go from an OOK Morse tx to an FSK tx and pick up at least
6 dB of improvement in the process, it's not a huge leap to go from
a receiver that's capable of receiving OOK Morse to one that's
capable of demodulating a bit stream from that FSK signal, either.

I find it very difficult to understand why you beepers maintain that
there's such a huge advantage in "maintaining the simplicity of CW"
when the simplicity is virtually nonexistant relative to much better
methods ... the only difference of any *real* significance is that
beepers insist on keeping a part of the signal processing in one's
head, instead of relegating such menial chores to a simple machine
that can do a much better job ...

> >Can you maintain and repair it?
>
> Since I built them from scratch I can certainly maintain and repair them.

In this respect, I have to "give the devil his due" and admit that you're head
and shoulders above Mr. "Put it in a box and send it back to Yaesu" (Mike D.)

> >Do you understand all the logic operating within the case?

> one of your microprocessor-controlled rigs or a breadboard rig (except
> the VFO does a little jump if you cough too hard on it).

So there's essentially no shielding and the oscillator is a tad microphonic.
As the "Church Lady" (of Saturday Night Live fame) would have said, "Well isn't *that* _special_."

I guess that's to be expected when one insists on such "low tech" methods
(hint ... the poor connections that likely result from "copper tacks as solder
joints" can be a significant source of non-linear distortion, and may cause
interference problems ... beware)

It is a bit sad and discouraging, however, that you insist on proliferating
such marginal techniques to newcomers who don't know any better when
you tell them (and it appears that *you* sincerely believe your own falsehoods)
that "this is great stuff!"

I 2nd. That! Now I'm a no-code tech and love 2 meters and 70 cm.
it nice and clear unlike HF. But I know code and can copy very well. I
look at it like this. When I went to school I took subjects I did not care
for or use today but I still had to learn them. Same with code. Code is
part of the Hobby and should be learned just like all the other topic of
Amateur Radio. And Like School, just becouse I did not care for the topics
I did not need did the school drop them. NO! I Think there's more to it
then Code. Like you said, CB! :)

Isn't there a short coax loop with phono plugs on the rear apron
between the receive contact of the antenna section of the t/r relay
and the receiver input which you can break open for use of a separate
receive antenna?

Regards,

The return loss of the 60 feet of small-diameter, high-loss coax was
protecting the finals (plus any VSWR-keyed power control in the
radio) ... the fact that he was within a mile of the repeater receiver
would indicate (give a descent antenna system and receiver at the
repeater) that he very well may have been able to have transmitted
into a dummy load and still gotten into the repeater.

It obviously doesn't, as your example indicates. The unfortunate part is
that those idiots *think* (legends in their own minds) that they're in some
way "advanced." The yackers and beepers and gamers have taken over
ham radio and perverted it into something other than what was intended
when we were granted the use of billions of dollars worth of public
spectral
resources ... what scares me is that the FCC may realize how fully this
perversion has permeated our ranks ... if that happens, bye-bye bands!

Hi Chris - "Idiots" are the jammers, folks with filthy language, law-
breakers; "uneducated" are folks who you've described above. You had
the opportunity to provide some education for those fellows but you
failed to do so; instead, you came over here to make fun of them. Shame
on you.

How does the code act as a filter? Those who know it *and* use it
as their primary mode tend to be extremely well-behaved on the air.
The idiots tend to be belong to the group that learned it but never
use it. In the 21 years I've been licensed I don't recall anyone
ever receiving a NAL from something they did while using CW; I'd
bet almost if not all NALs have been issued for infractions committed
while using a mode other than CW. Coincidence? Hardly.

That there are idiots and uneducated ops that know the code just
goes to show that almost anyone can learn it. Thanks for re-enforcing
that notion.

>as the term "ham" only has the meaning that we provide for it
>and in that sense has become synonymous radio amateur in popular
>usage. "Hobby" has a different meaning in popular context than
>"service".

It is my hobby to perform a service. It is my *hobby* to *serve* with the county civil defense RACES during hurricane and tsunami warnings. It is my *hobby* to *serve* with ARES during other emergencies and when community events require radio comms. There is no contradiction in treating our service as a hobby.

As mentioned before, 0.1% of my operating time is with the CD (serving); the remaining 99.9% is not. Short of manufacturing a daily disaster for the county/state, the ARS is a hobby for me. For every one of us, our day-to-day radio activities are our hobby; only during the flood, tornado, forest fire, hurricane, power outage, explosion, or just the 911 auto-patch call, do we serve. Yet it was the day-to-day hobby-type activities that prepared us to serve our community when called.

Now, S 97.1, our charter, only mentions "service" once. What service am I performing when breathing solder fumes while attempting to abide by S 97.1(d)? What service are we performing when abiding by S 97.1(e) (which encourages us to work DX)?

As an aside, let me ask you - is it our option to pursue any one of the five items of S 97.1, or should we attempting to abide by all five?

Dearest People,
Hello! I wrote a letter earlier asking for help about dual frequency mobile phone antennas, I wanted to keep the message short because if I tried to explain the whole situation in one mail, no one would read it. What I am very disappointed is with the response that I got form 2 people from the newsgroup who simply SLAGGED ME OFF and accused me of trying to get a free ride from somebody else's work..... I am a final year student of Electrical and Electronic Engineering in Imperial College of Science, Technology and Medicine, London. We were rated the third best Electrical Engineering department in the WORLD two years ago and I am a lot more capable than these 2 people made me out to be.... George Baker and Ken Thompson!!!!!!
My project is to investigate the viability of a dual frequency antenna system for a mobile phone at two frequencies, 900 MHz for GSM and 1.8 GHz for PCN. If simulations are good, then I will probably build it. I have suggested after a lot of background reading that the best technique to achieve this is antenna diversity, a DTSA (Double T-slot Antenna) for Tx and Rx for 1.8 GHz and a double helical antenna that itself is dual-moded that will Tx and Rx at both frequencies. A side mounted PIFA (Planar Inverted F-Antenna) and an end-fed monopole "whip" antenna was another possibility but their proximity's in a small housing would interfere with each other, shifting the operating frequencies.
With my proposed system of DTSA and helical antenna, I now want to simulate it. I have a program called MININEC PRO that uses the MoM (Method of Moments) calculation technique to investigate near field concentrations of the antenna and radiation patterns. The only problem is that this program assumes a free-space environment and infinite ground plane for antennas operation. I would like to simulate the antenna system in the proximity of a human head with dielectric properties. This is important for the SAR (Specific Absorption Values) projected values that cannot exceed 1.6 J/kg by FCC rules. There is a professional package called FEKO that uses FDTD (Finite-Difference Time Domain) to do this simulation but it costs 15,000 pounds sterling and I definitely do not have the funds, neither does my department. So, I am writing to ask whether anyone knows of any other software packages out there that are cheaper and probably obtainable that would help me a great deal for my project. Right now, I am writing some code in MATLAB for the MoM analysis for the near field of a centre-fed dipole antenna. It is really tough!
I hope I will get favorable answers now that I have explained my situation. I am sorry if I have given the wrong impression if I was trying to do a quick one, I had no such intention of doing so. I am going to be an electrical engineer in 4 months, Inshallah and I have higher standards than the 2 people in this newsgroup already think.

Thank you for reading this far.....

Zaman

From: winston@cyber-wizard.com
Message-ID: <5gneng$kmt@informer1.cis.McMaster.CA>
Source record: 202133

Hi there,
I am a final year student in EE. I am working on microwave links at 38.7GHz for my thesis. The antennas system that we use are built by Harris. It is called the "Microstar".
I would like to know more about the advantages and disadvantages when connecting at such a high frequency in telecommunication.
I am also studying the attenuation and effect of such frequency when it propagates through various type of glass,vegetation and weather.
I am trying to use some formulas in order for me to verify my experimental result with the theoretical result. However, I am not sure about which formulas in optics or microwave that I can use.
If anyone of you have more to say about this, please send an email to winston@cyber-wizard.com . Any other information would be greatly appreciated.

BTW, I hope I am posting up in the right newsgroup. If not, I would like to apologize and please suggest the right group for me. Thanks.

** I have limited excess to newsgroup, so please replying by sending an email to me.

Thanks you for your attention.

Winston

6069. Advertise your Ham travel related business at Hamvention

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-19 00:00:00 UTC

Source record: 202134

ADVERTISE YOUR TRAVEL RELATED BUSINESS AT HAMVENTION

Ham Holiday International would like to announce the availability of advertising space at the 1997 Dayton Hamvention.

Ham Holiday International assists the Bed & Breakfast or vacation rental owner advertise their business to the Ham Radio world.

The Dayton Hamvention is the largest gathering of amateur radio enthusiasts in the world. Over the past few years, the Hamvention has regularly attracted over 30,000 radio fanatics over the three day exhibit period. May 16,17, & 18 are the dates for this year's Hamvention.

Ham Holiday International has been given a high profile booth location in the main indoor exhibit area - Booth 262 - near the food concession area - between the main floor and the flea market.

What we hope to provide is an economical way for Ham travel operators to get the word out about services and accommodations that are provided by their operation.

Some of the services we can provide at the 1997 Dayton Hamvention are:

Literature Distribution

Formulation of Mailing Lists

Information gathering through the use of surveys

"Hamvention Specials" and give-aways to promote specific locations

Provide specialists knowledgeable about the specifics of your operation

Feature photos of your location in the booth space

Advertising packages are can be customized for your needs and to fit within your budget. Advertising packages start at $25.00.

For further information, please contact Ham Holiday International's Dayton location by mail, e-mail or telephone at:

Ham Holiday International

Well, I'm not a MEMBER a hum, but I am sure in their guide (chicken hawks r us) it would say.

1: Apply a generous ammount of FLUX (or KY)
2: slowly slide your coax in
3: (this part for you pediphiles) if it it to tight and does not fit, CRAM it in sooner or later it will rip and tear into the connector and will fit.
4: Wipe up all excess FLUX and be sure to remove (kill) any evidence (witnesses) of your actions.

hello and thanks for reading my mail.
Last week I bought a second hand DX-33 penatrator.
I putted the beam up but the SWR seems to high, used the
same setup as the last owner.
Could anyone tell me how I can reduce the SWR on this type
of antenna. I don't have the papers so I don't know wich elements
I have to change.
SWR ON 20M 1.7
15M 1.9
10M 3.0

any help is appriciated,

If you happen to be in the area: Singapore is a good place for
ham equipment (as long as you do not look for accessories).

Try the Lim-Sim Tower and Lim-Sim Center, a couple of well
equipped ham radio shops in there with friendly people. I bought
an IC-706 for approximately 800.- US$. Check the function of
the radio in the shop, its too late when you're back home.

hehe that is a strange comment. As far as I know, Art Bell is an entertainer...nothing he says (or his guests say) should be taken as the truth....it is entertainment. And if he apparently has the power to "put fear into his listeners" yet still has a #1 show....I'd like to have his job. :) just an off-topic comment, just had to let Art Bell listeners out there know...it is nothing to take seriously...even Art himself doesn't take the show seriously sometimes. (note: this is not directed to Stacey specificly...just used her post to get this off my chest)

Source record: 202145

That's it!

The new aircraft tracking Software for Windows has arrived.

After read this presentation message please don't forget to visit AirNav URL
where you have more detailed information of the program and some
Screen-Shots.
You can also download a DEMO version of AirNav with two tracking samples.

AirNav URL
http://www.geocities.com/SiliconValley/Lakes/9420

AirNav E-mail
airnav@geocities.com

With AirNav you can understand all the flight control organization under
world air traffic
control centers: just enter flight data to the program via MANUAL MODE
(in a understandable
table representing flight waypoints and times) or TERMINAL MODE (where a
command
interpreter will decode all information given and store it into memory)
and the program will track the
flight on a map that can be done by you using one of the three map
generation commands provided.

Tracks up to 50 aircraft at the same time
160 000 position digitalized world map
Possibility of draw your own area map
Includes an editable and searchable database with over 8500 VOR/NDB
16000 aircraft editable database with selcal, registration, company and
aircraft type info
Easy-to-understand communication command interpreter
Manual and terminal data insertion modes
Estimates next enroute waypoints ETA's

More than 50 error messages make the program easy-to-use but
don't forget that for any possible
question you only have to E-mail me to airnav@geocities.com.
It's also provided a help file with over 60 topics where you can
learn and understand the usage of the program.

For more information visit AirNav URL at
http://www.geocities.com/SiliconValley/Lakes/9420

Thank you very much, Andre Brandao, CT2GGD

6081. 100's of "Ham Radio Only" Classified Ads & Post for FREE!

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-19 00:00:00 UTC
From: wb6siv@telis.org
Message-ID: <wb6siv-1803972144130001@s14-pm03-ontro-t.telis.org>
Source record: 202146

The Raymond Sarrio Company's Ham Radio WWW site has a very large data base of ham radio classified ads. All ads stay on-line of 30 days and are list at NO COST:

http://www.sarrio.com.

Browser/buyer information:
My free classified service allows Hams to search for equipement with the help of our new and unique search engine. The search engine allows you to search by Title and Manufacturer--no need to scroll through 100's of listing before you find that special piece of gear, nor do you need to wast time waiting for a long list of ads to be downloaded. Plus, when you find the gear your interested in, you can point-and-click to creat an e-mail access to the Ham that listed the item.

Seller information:
For those Hams with gear to sell, take note! It is absolutely FREE to list your equipment within the Ham Classifieds, and there will be no posting time delays.Your posting will go on-line, in our classified search engine,in about 1 hour. All you need do is fill out a simple forms page, and upon its (point-and-click) submission, your "For Sale" advertisement is on-line.

The classified listing are purged every 30 days, no need to repeatedly repost your ads, as is often the case in rec.radio.swap, where over a 100 ads are added each day, and many of which are commerical nonhamradio items. As a result, your ads are quickly lost. Most newsgroup software programs have a default cap of only 400 to 500 listings. That's about 4 days of postings here. So when you post with us you don't have to keep coming back to repost every few days. BTW, when your month is up you will a note informing you that your posting is being purged, and if you would like to continue your post please return to the site and fill out a new form.

Give it a try, 73's Ray

>
> Same with SOS. Do the letters have meaning or was it chosen because it
> had an easy sound combination to remember and key quikly?

CQD was originated by the Marconi company in 1904 as a general call (CQ) for distress.

At the International Radio Conference of 1906, in negotiations to establish an international standard, the German Delegation suggested SOE, which they were using at the time. As E could be easily lost in QRM, the convention decided upon SOS instead.

Titanic operator Jack Phillips sent both CQD and SOS (which is properly sent as a single character) to be certain that there was no misunderstanding.

I found a website that has a free download of Amateur logging software - and alot of other amateur related programs too ! The database is in full color, has logging, QSL functions, access QRZ! cd-rom, search DX prefixes, ten minute timer, colorful world maps with call prefixes for reference, awards tracking, screen savers, English/Metric conversions and much more !

You can find it at http://www.esdi.com/log-it

They also have a bulletin board for Amateur Radio related stuff. You can use it for messsages, sell/trade/buy, computer problems, track DX and all kinds of things !

The site will soon have a chat service for maintaining contact when the bands are down.

Take a look ! Thanks .... Jim

Another inexpensive method is to use a 6 meter receiver in ssb or cw mode.
The meteors will make a pinging sound when they strike the atmosphere.

Well here we go again. I suppose a half a dozen guys with soldering irons and a buncha IC's are gonna save the ARS???

You're very concept of nocode HF is gonna flood your precious spectrum with far more gamers, yackers and dx'ers (you forgot that one) than it is with technoids who like to see how many bps of smutty pictures they can transmit over the air.

Better rethink the whole thing out again. Although the scenerio that was discussed seems to be replayed over and over and over and OVER by the incoming class of nocode technicians. You know, the appliance, out of the box, I'll read the instructions after the white smoke comes out of my radio, types. Not all mind you, but what seems to be a more than fair share of the operators (at least in the NY-NJ-CT-PA area).

50.400 is the AM calling and working freq. There is a net saturday
morning at 6:00 AM. It's 6AM on 6AM. No kidding. Check your local area.
Also:
52.525 FM calling freq.
50.090 CW calling freq.
50.110 - 125 "DX Window"
50.125 on up SSB calling and working.

Good luck and have fun. 6m is a blast

Dan

Hi, how are you? Buy the Hustler G6-270. Buy American antennas, we make the best, maybe the Japanese make nice radios but all of my Japanese antennas stink, and have been replaced.

Doug:

Yes, I used it ages ago not totally understanding what it was supposed to do. It is basically shielded 300-ohm balanced transmission line. If everything from the antenna to the receiver were truely balanced at all frequencies, there would be no need for the shield. The shield is supposed to keep common mode "noise" (like HF amateur transmitters) out of the transmission line, and, therefore, the TV receiver. A fully balanced transmission has no need for a shield. If the shield is properly terminated at both ends, its marginally successful. The shield is too thin to effectively shield magnetics fields generated much below 20 MHz. Where do you "terminate" the shield at the TV antenna end? Who knows! In reality, just use "normal" twin lead and forget the additional expense and bulk of the shielded stuff.

> transmitter.

Oh how I agree! The pro-code geezers are trying to defend a 100+ year old communications medium under the guise of "skill". Big flipping deal! Knowing how to build a CW transmitter is like knowing how to build a steam engine: It does require skill and practice, and probably has some practical value, but how often is it really needed or desired in the real world?

I also deeply resent the sentiment that proponents of modern equipment and modes don't know anything. I'll bet I know more about this computer than the best CW operator knows about CW. And I can communicate millions of times faster and more efficiently to boot.

Yeesh! I think the "coders" realize it is the 90's, we just have to convince them it's the 1990's. I wonder how many of them ride a horse to work everyday because it requires more "skill" than passively sitting there with your hands on a wheel and pushing some pedals with your feet.
No biggie. Just my opinion.

I think it is better to make your own? I took a 5ft helical whip
from my 11 metre days, stripped all the wire off until I was down to the
base and the fibre glass rod. Then took a piece of copper wire and ran that
up the length of the fibre glass. Tunning was a simple matter of prunning
the wire until I had maximum forward power and minum swr.
Just a word of warning. Really watch for the point of maximum
forward power. Just because SWR looks good, don't mean you have got the
best forward power. Some of my friends and myself are really wondering
about this 1:1 SWR bit. Why not try maximum forward power even if the SWR
is say 1.75:1. Trouble is that most txcvrs will shut down if SWR is higher
than 1.5:1. Oh, for the days of valves and impedances of 75 ohms.

I tend to think that it should be a bit more than just CW.

Some of the things that intrigue me about amateur radio are:

1. digital communications
2. satellite communications (very cool)
3. meteor scatter (grows out of my astronomy interests)
4. designing and building radios (esp. qrp)

Unfortunately, I believe that for a great many amateurs, the main
difference between hams and CB'ers _IS_ CW. It is too bad.

Strange, but true. The prefix a- means against, opposite; its usage
is similar to that of the prefixes un- or non-.

Examples: symmetric, asymmetric; sexual, asexual.

Why not let those who like CW keep it.

A CW class ticket would permit the operator to work CW in the CW parts of the bands.

A no code ticket would not permit use of the CW portion ot the bands.

This really seems fair to me, but then who am I?

Is it true that during disasters thr FCC is asked to permit voice operation in the CW portions of the bands?

>This really seems fair to me, but then who am I?

It would be an improvement on the current system, but the restriction itself seems unnecessary. If only CW operation is permitted in a subband, then you have to know Morse Code to operate there. The only purpose a test would serve would be to keep slow-coders from operating CW.

6120. Paper Callbooks SK

After 70-odd years, the paperback versions of the Radio Amateur Callbook will be no more after the current (1997) editions. The publisher, Watson-Guptill, has elected to stop publishing in paper, citing the high cost of newsprint, binding, warehousing and shipping.

The Callbook, with its distinctive Flying Horse, will continue to be available on CD-ROM, with the next edition due out in May.

Sigh.

CW is a part of ham radio and should always be. I know it kept me
from getting into the hobbie for most of my life because I didn't
think I could learn code, but if the truth be known, I was probably
like 99% of the people who are for no-code---lazy. Once I made up my
mind to work at learning code it was surprisingly easier than I
thought, but it did take determination to keep at it every night if
for only a few minutes. Well, I started this quest in March of 1991
and by November I had my Extra ticket. If I can do it anyone can. It
had an extra benifit, because when I decided to learn to fly I
discovered that each airport has a three letter identifying beacon and
it's in morse code; my instructor was impressed. KG7TV

Dear Sir,

As, a Hong Kong poeple, I am sorry to hear about this.
First of all, don't buy electronic/radio equipment in Nathan Road.

I suggest you to go to Sham Shui Po, Apliu Street. You can go there by
MTR(Mass transit railway).

The IC-2000H should be less than HKD$3000(US$380).
You can buy a lot ham equipments there.

My memory of the newstory is that the individual, formerly a magazine editor, was severely paralyzed by a stroke and was able to move only a single eyelid with great difficulty. In his situation CW was not likely an option. He and his transcriber found a method that worked for them, with the limitations they faced.

Courtesy tones are especially good when you're in a QSO but not paying any attention. When you hear the "blee-bloop," you know its your turn to say, "Ahhhh - Rig here is a Ya-Com-Wood with a triband Cush-Comet at 35 feet AGL, 545 feet MSL..."

Just a little heads up. I picked up the subject CDRom at a hamfest over the weekend and was very disappointed to find that despite the December date it does not have the November vanity calls. Since this was the primary reason I bought it I now have an expensive Frizbee. I have written to Walnut Creek but have not received an answer.

Just thought potential customers would like to know.

UHF Power Amplifier Modules

The MITSUBISHI M67729H2 has been developed and produced in large quantities
for UHF cellular telephone applications.

Technical Data:
Output Power = 20 W
Gain = 21 dB
Harmonics = -40 db
Spurious Outputs = -70 dB
50 Ohm in/out

This module is also excellent suited for class C Amateur Radio PA's in the 70 cm-Band.
The low output of a UHF handheld may be amplified to about 20 W output! The use of these
modules is the easiest way to build a PA. There are various discriptions in the ham
literature.

I am now able to offer you this excellent module with a more than 10 dB! price
reduction:

1 ea for DM 35,--
10 ea for DM 300,--

plus postage with C.O.D. charge.

Another constructive comment, eh? I suppose you think you're helping
ham radio.

>What do you propose to distinguish between those who can and deserve the
>higher license classes and the others... "everyone can't be at one level in
>wealth, occupation or ham radio!!!

Not everyone can be at the same level, but this notion that licensing
has to artificially create some kind of caste system is just quaint.

Even if all US amateurs were granted full Extra privileges tomorrow,
not everyone would be at the same level in amateur radio. The
level people are at in radio is determined by their involvement
and interest. Some people build their own gear, develop their
own software for amateur radio, others focus on emergency preparedness
and public service. Yet others chase DX (hey, chasing DX is fun but
does darn near nothing for amateur radio IMHO). License class
isn't the issue - it is just some artificial set of standards that
distract from what probably ought to be the real standards.

Yeah, go ahead and call me a good buddy. The joke will be on
you if you do.

I understand fine .. *partial* congrats "professor" ... the formula above
is
correct, but it's NOT the same formula as where you made your blunder...

In the other post, the other guy said:

"power_in_dBm = 10log(power_in_Watts) + 30"
(which is, of course, correct)

You said:
"Incorrect ... pow_in_dBm = 10log(power_in_Watts) MINUS 30"

YOU were WRONG ... by a factor of 10^6 or 60dB ...

It's OBVIOUS what YOU don't understand ... (simple unit conversions)

And you purport to teach mathematics at the university level? Talk
about "the dumbing down of American education!"

Welcome to the club. Figuring it takes 4-6 weeks to get the inof together, then set up the machinery, press the CD, packaging it, get it to the "stores", anyone who bought any database CD last year expecting the vanity calls in it got what they paid for.

Bets bet is too wait, like most did, including moi, till the spring releases. Better yet, if access, use the internet databases, which are updated daily, if not sooner.

BTW, you could sell it to some unsuspecting person for about $8

Hi Jerry. I may have a product you might be interested in.

I have been getting ready to produce a CD that has a callbook on it. It is not the main focus of my CD, but it does have a complete, fully funtional US callbook on it. It has all calls up to February 24, 1997 (including my new vanity, N7LN, issued on Dec 4.)

However, the callbook is considerably stripped down so that it can be installed on a hard disk. (It takes up about 60 meg or so.) It has all callsigns and addresses, but that's it. No class information, no expiration date, callsign type, etc. You can search by callsign or name. It is a very simple, yet functional, DOS program. Nothing fancy. But it will let you log to a file so you can enter call signs and it will create a text file of the names, calls, and addresses that you could load into a word processor and print labels.

But as I said, the callbook is not the main focus of the CD. (I have considered releasing the callbook as shareware, but it would take 12 or 13 1.44Meg disks...) My CD is a collection of HAM Radio clipart, to be used for making QSL cards, newletters, or for Websites. I've assembled probably the biggest and most complete HAM Radio clipart collection that exists. (But existing stuff wasn't hard to beat -- there's really not much out there; that's why I'm making this product, because I think there is a big market for it.)

I'm also cramming tons of other stuff on the CD, like around 200 shareware/freeware HAM programs, TONS of ARRL bbs downloadable files, RACES bullitens, packed info, over 400 radio modification files, SWL stuff, and whatever else I can think of.

Let me know if you might be interested. I'm not quite done with my collection yet, but will probably be shipping CD's within 2 or 3 weeks. (To start with, I am recording the CD's myself at home with a CD writer. As demand advances, I will be having them professionally produced.)

(BTW, the introductory price will probably be $39.95. But that will include a registered copy of the shareware callbook on the CD that will let you install it

any number of times on your own computers. Or, of course, you can just run it from the CD.)

If anyone is interested in this product, please email me and I will put you on my list of interested parties. I will contact you when the CDs are available.

6145. CODE: What's the Problem?

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-20 00:00:00 UTC
From: Ed Loranger <loranger@sr.hp.com>
Message-ID: <33317898.6997@sr.hp.com>
Source record: 202114

OK. I'm a coder. I don't care if its QRQ or QRS, just
working the code is fun.

The problem I have is that as an extra, I can do the
fast code on receive, but I only have a straight key and
don't want to send garbage when trying to send QRQ.

It seems a lot of high speed coders are out there. But they're
shutting many straight keyers out. Then they've got some
of theses character completion devices, decoders etc.

What ever happened to really working the hobby to all levels?
I like to go QRS -- especially in QRN/QRM periods. This is
a real challenge at QRP. But everyone can work it!

One can operate CW like a surgeon with a knife -- skillfully
inserting a signal between two "fists" and shutting down the
XTAL filter. Now this is fun, and can't be done with SSB voice
etc.

I think that this is what its all about. HAM operators actually
demonstrating their skills in the communications arena.

I hope some of you can slow down so that others might
answer. Let's open the door to all HAMS!

(All opinions are mine and do not intend to offend others
or their Amateur Operating Modes.)

-Ed.

Come on Jerry,
What about all the other stuff on the CD.
If all you bought it for was new calls why not just get
on the QRZ web page? It has the current calls on it. I understand
it is updated dailey.
QRZ is really nice to allow us access to this services for FREE.
I hope you did not pay more than $12 for the CD as that is what I paid
at a resent ham fest down here.

I was led to believe that SOS was adopted early on in the maritime
service as an abbreviation: Save Our Ship. Anyone have any input on
that?

This just off the newswires. I think it speaks for itself.

Just remember BE CAREFUL WHAT YOU WISH FOR, IT MAY COME TRUE!!!

FCC Enacts Internet Morse Code Requirement
--- ------ -------- ----- ---- -----------

The FCC, under pressure to clean up the Internet, especially after the Communications Decency Act provisions regarding Internet content regulation were stricken as violating the U.S. Constitution, has decided instead to require a Morse code requirement for Internet users. Citing the success of the Amateur Radio Service and the general belief that its requirement for operators to pass a Morse code proficiency exam and other technical requirements, has kept the A.R.S. "clean", the FCC will enact a 5 word-per-minute requirement for all Internet users. They are leaving open the issue of whether there should be a "codeless" class of Internet user and are soliciting comments on this proposal.

Persons wishing to develop a web site having only links to other web sites having links to other web sites, and so forth, must pass a 13 word-per-minute test and demonstrate proficiency in HTML, the Internet authoring language.

Persons wishing to develop web sites that have actual content, as compared to just links to other web sites, must pass a 20 word-per-minute Morse proficiency test, demonstrate proficiency in HTML and the Java programming language, and show that they have mastery of at least one human language, such as English.

The FCC, which lacks budgetary authority to implement the testing program, has stated that it intends to create Volunteer Examiner programs for Internet applicants.

6150. Chinese vs. American Tubes ?

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-20 00:00:00 UTC
From: Dan K Nelson <dknelson@pacbell.net>
Message-ID: <3331CB1B.5AA5@pacbell.net>
Source record: 202119

I have seen postings for 811A tubes of both American and Chinese manufacture. Usually, the US tubes sell for two to three times the price of the foreign tubes. I would suspect that the saying "You get what you pay for" would apply, but I am curious if anyone has had any experience with the Chinese tubes?

Thanks and 73's,

Hi Len, did it ever occur to you that those abbreviations and Q codes
can just as easily be used with any other mode? Morse code doesn't
have a monopoly on them. I use abbreviations and Q codes on SSB and
communicate with lots of hams whose native language is not English.
It would work even better on the digital modes.

Wrong. Years of building CW xmtrs gave me the confidence to start
on rcvrs, Carl.

I've steadily advanced my own skills over the years; this isn't a
profession for me, only a pastime. I don't have the advantage of
having an EE degree such as yourself (oops - I forgot - you admitted
you never finished college and have no degree!)

>> >Did you build it or purchase it as an appliance?

>> More than half my transmitters were built myself from scratch. A favorite

>> built transmitters.*

>Again, it appears that you only build simple transmitter strips ...
>now that's fine, but without a receiver you're sort of wasting
>your time, right?

Carl, I've got two fine working superhet rcvrs built from out of
ARRL Handbooks, and a DC rcvr built from DeMaw's QRP NOTEBOOK.

You're so contradictory. You bash hams for not building, then when
a builder comes along you bash him.

>As has been pointed out, receivers are generally more tricky
>than simple CW transmitters ... however, just as it's no big leap
>to go from an OOK Morse tx to an FSK tx and pick up at least
>6 dB of improvement in the process, it's not a huge leap to go from

>capable of demodulating a bit stream from that FSK signal, either.

I can't copy 5-unit Baudot in my head, and I can't build a keyboard,
so I'm not interested that FSK. I supposed I could send FSK with
a paddle... I'll stick with CW.

>I find it very difficult to understand why you beepers maintain that
>there's such a huge advantage in "maintaining the simplicity of CW"

Driving a car is faster than walking, but we are still filled with
undescribable joy when our children take their first steps.

>> >Can you maintain and repair it?

>> Since I built them from scratch I can certainly maintain and repair them.

>In this respect, I have to "give the devil his due" and admit that you're
>head
>and shoulders above Mr. "Put it in a box and send it back to Yaesu" (Mike
>D.)

But Carl, MD is being incredibly facetious - he's taking the argument
to the extreme on purpose; when someone says "delete the code test"
he retorts with "delete all the tests." You're thinking is so narrow
that you fail to detect any hints of sarcasm on his part.

>> >Do you understand all the logic operating within the case?

>So there's essentially no shielding and the oscillator is a tad
>microphonic.
>As the "Church Lady" (of Saturday Night Live fame) would have said, "Well
>isn't *that* _special_."

I took metal shop in junior high; I can fabicate a case out of sheet
metal in minutes. I suppose your dainty hands have never worked with
metal cutters and hand-drill. (My favorite RF-tight case is an
ammo box, but my xmtrs are clean and it helps dissipate heat to
keep them open.)

Every homebrewer has S 97.307(d) tatooed on the back of their hand.
I have access to spectrum analyzers on campus (one is just two
minutes from here). My xmtrs are spectrally pure; all operate at
least 40dB below peak power output.

>I guess that's to be expected when one insists on such "low tech" methods
>(hint ... the poor connections that likely result from "copper tacks as
>solder
>joints" can be a significant source of non-linear distortion, and may cause
>interference problems ... beware)

The solder flows very nicely over the copper tacks, Carl. Your vision is so limited you error in thinking the tacks replace the solder. (Note the difference between "some" and "all"; I said "some" in my original paragraph above. I don't advocate breadboard rigs for beginners.)

>It is a bit sad and discouraging, however, that you insist on proliferating
>such marginal techniques to newcomers who don't know any better when
>you tell them (and it appears that *you* sincerely believe your own
>falsehoods)
>that "this is great stuff!"

Marginal? Hardly. My radios are solidly build and are subjected to all the legal limitations set forth in the regs. You don't build so you've never experienced the feeling of working other hams thousands of miles away with equipment you've built yourself. With your license you're limited to VHF repeaters, so it's only nature you're an appliance op. But you should consider building some VHF gear; you could start with a Ramsey kit, I suppose.

Jeff KH2PZ

P.S. It's never too late to finish your college work and finally earn a degree, Carl. Many of my older students are finishing work they began 20 years ago. Your credits will probably have expired by now, though.

Fine with me. But since the code is permitted on all frequencies on all
bands (i.e., there are no frequencies where code is prohibited), your
no-code HF ticket wouldn't permit you to operate anywhere!

Hi Jim - What's your QTH? My 20m "wire beam" is oriented due south.
It consists of a 20m dipole, with a wire reflector and wire director;
all three wires are strung between two buildings, and happen to be
oriented to the South Pacific. I never hear any KL7's but tons of
Pacific island stations so I guess it works!

Don't forget that I've got the 550W Galaxy GT-550, and a 90W Heath, but
I spend more time with my 5W peanut whistles (much to Carl's dismay).

I come from a "blue collar" family ... my father, who died when I was 18,
was a carpenter in a steel mill ... my stepfather, who's been married to
my mother for longer than my father was, was a machinist in the same
mill for almost 40 years ... guess again, bud ...

> BTW Aren'y you the one who is extolling the virtues of the Internet of
> the Air?? Seems to me, you are. That in my books makes you a portrayer
> of smutty pictures. You should be very proud

Having ham networks with the bandwidth and thruput capability necessary
to convey meaningful content does not imply or mandate that that content
will consist of "smutty pictures" ... YOU're the one who first thought of
smutty pictures anyway ... what gives? Do you have a guilty conscience?
(and a tired arm to go with it?)

> > I can understand how frustrating if must be
> > for them at the data rates that are possible with OOK Morse ... what I
> > don't understand is why they continue to resist adopting better, faster
> > modes that will operate under worse conditions with less power ...
>
> Actually the resistance is the attempt to force feed people something
> with plunger.

Talk about "the pot calling the kettle black?" ... it's amazing that you
have
the balls/lack of shame to make a comment like that ... you insist on
forcing

Morse down everyone's throats ... I and some anti-code test/pro progress
folks suggest that better modes are available ... you beepers want to
continue
to prohibit their development and use ... under the guise of "maintaining
the
standards" (of the Archaic Retro Radio Luddites) ... what gall you have!!!

> Your smug self righteousness, you're I AM BETTER THAN ALL
> OF YOU attitude towards anyone different from your RF Engineering self

What I've said is that technical contributors and public service types
meet the purpose and goals of the service much better and provide far
more public interest/public service value in exchange for our allocations
than the "yackers, beepers, and wallpaper collectors" that have come
to dominate and pervert ham radio to their own purposes ...

> In fact, that makes you a kind of racist..interesting!!

Absurd ... it has nothing to do with race and you know it ...

> That coupled with the fact, that your faster rates are not much of a
> reality on HF, which is your entire argument concerning code/no code

The limitations only exist in *your* mind, but that's not surprising ...
that
you are not knowledgable enough to even envision the possibility, let alone
the means to realize far faster, better, more spectrally-efficient means of
communicating on the HF bands does not mean they are not feasible ...
hell several already exist (Clover, PACTOR II, etc.) and they are not all
that
wildly advanced ... barely scratching the surface of what's possible with
the DSP and VLSI technology at hand today ...

> --
> Steve KF2TI
> What one individual only dreams of doing can
> be accomplished by many individuals collectively
>
> Robert Kennedy
>

The quote in your sig is an insult to Mr. Kennedy ... because you
lack the vision and immagination to see any possibility beyond
your own limited experience and existence ...

I *know* that far more is possible for ham radio ... you actively
doubt it and attempt to impede it ... to borrow your words,
"shame on you!"

Based on past performance I actually expected QRZ would have them. In
fact the calla are there just all the other data, name address etc. are
missing. Is looks like they screwed it up and went ahead and sold it
anyway. My real gripe is the lack of response to the email I sent them.
The whole point of the original post was to let folks know so they
would not repeat my mistake.

Come on Bob,

Read what I wrote. I bought it for calls issued six weeks before the CD
was issued. The calls are there with no other data such as the names
addresses etc.

It is a bit tough to get on the internet at all times, besides that is
a real waste of bandwidth when a storage product is sold specifically
to supply the data desired.

The rest of the stuff, a bunch of shareware available elsewhere, so
what. They are marketing a callsign database, it is incomplete as of
the date they published it, that is the point.

No Bob I didn't spend more than $12 for it and I will spend another
couple of bucks sending it back to Walnut Creek. Perhaps that is enough
for now before I start in on your spelling.

Hello,
I own a 1995 Vulcan 750 and a Kenwood 742. I am wondering if anyone had any ideas how I can carry my radio. I was thinking about using a tank mounted bag but I don't know about it overheating. What about speakers and a microphone. What are some of my options. Please email me with your ideas.
Thanks in advanced

If you have problems with what you buy, what do you do?
I always buy locally from AES in Milwaukee.
If I have a problem with what I bought, they will bend over backwards to help me out.
Sometimes I might pay five or ten dollars more for some gear, but it is worth it. Usually their prices are competitive.
Support your local Ham dealer. It's worth it.

I just happened to be passing by, and noticed this thread... Permit me (an old ex-ham) to share my one thought with you guys...

I happened upon a recent vintage ham a little while ago, who proudly showed me his hand held two meter transciever; punching all the neat little buttons... explaining about how he could punch up the repeater and dial up a sattelite, and all sorts of wonderful stuff I didn't really feel too interested in... He did this for me because I had told him that I had been a ham...

So, whatta 'ya think? he asked.

I told him that it all resembled a cell phone, was my reply.

Where's the magic, anymore? Where's the thrill of hassling with a drifting receiver and a cranky transmitter.... Where's the challenge of trying to sort out a weak cw signal from Portugal, beneath all the clutter of 50 other guys, all trying to butt in, or whatever else they're doing? Where's the pride in having your own fist, or being able to recognise a buddy's... without hearing his call sign???

No smell of hot phenolic and wax capacitors. or the trhill of late nights, illuminated by the dim purple glow of my old final amps, pulsing to the rythym of my unspoken words...

Nah, I couldn't get too interested in this new stuff... there's just not enough romance in it for me...

Thanks for listening, anyway...

K9WVQ, ret.

Ever since I began publishing my reports on the antics of the 3894.5 occupants (a/k/a "The ZOO of Amateur Radio"), my mailbox has been flooded with comments and suggestions of other ZOO-type frequencies to check out. Here's an excerpt of a letter I received yesterday. Applause, please, as we introduce "The Walter Barstool Show!"

>> I happened to be
tuning across 14313 during the day and heard some guy called Walter.
He's an old-time ham geezer-burger in the northeast, who seems to have a propensity for getting on the air when he is a bit intoxicated. He will discuss everything from world issues, religious and ethnic heritage and sexual procreation
while in a drunken stupor that would make W.C. Fields and Foster Brooks envious. Then at night, he will often migrate to 3950 and do the same there. If My SW-8 speaker could reproduce odors besides sound, I am sure that when ole Walt is on, I would smell a whiskey distillery. Check out these
2 freqs and look for "The Walter Bar-stool Show", It is quite amusing listening. <<

And the hits just keep on coming...

> that?

If that story were true then the message would have indeed been SOS
and sent as three letters, like CQD had been. In fact it is a
prosign (procedural signal) which may be represented as SOS with a
bar above it to indicate that it is sent without any inter-letter
spacing. It might as validly have been represented by VZE barred or
3B barred or a number of other combinations which all sound the same.

Last I heard .... Lamda was a manufacturer of quality power supplies for the computer industry ... but that's obviously not the topic here.

Curiously though, it has been shown many times over that those who are among the most notorious gay-bashers anare either uncomfortable (or unsure?) of their own sexuality and/or are in fact homosexuals themselves. Roy Cohn (remember him as an aide to Sen Joe McCarthy?) an a vehement (apparent) homophobe was ... yep ... a homosexual himself. Same is possibly true for J. Edgar Hoover.

Soooooo... makes me wonder about the fellers who are the most vocal on this topic. The more vehement types are particularly suspect.

Cheers guys.
Sandy

Archive-name: radio/phonetic-alph/full
Posting-Frequency: six weeks

Phonetic Alphabets (Alpha Bravo etc)
March 1997

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic/radio/
spelling/telephone alphabets, and the term analogy alphabet
is also used. This collection currently includes alphabets
for the following languages:

English, French, German, Dutch, Flemish, Spanish,
Portuguese, Italian, Romansh, Danish, Norwegian,
Swedish, Finnish, Czech, Slovak, Polish, Hungarian,
Croatian, Serbo-Croat, Romanian, Turkish, Hebrew,
Russian, Swahili, Kwanyama, Ndonga, Afrikaans,
Chinese and Esperanto.

This posting supersedes the one of 12th February. There are
a number of changes.

My thanks to the many contributors, not all of whom are
acknowledged below.

This is the last time that I will be able to post this
collection. Please report any errors or new material to a
future editor.

In my capacity as the editor of this collection I have no
objection to the further electronic distribution of this
posting in full in circumstances where it is likely to be of
interest, and where a document of this length is acceptable;
in the case of Web pages I ask that care be taken, as it is
easy to mangle something. Note that there is also a brief
version of this collection.

A copy of this article on the World Wide Web can be found
at:

***** ENGLISH *****

The NATO phonetic alphabet:

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

[This alphabet dates from about 1955 and is approved by the
International Civil Aviation Organization, the FAA and the
the International Telecommunication Union; note that
different bodies prefer different spellings, so one also
sees: Alfa Juliett Juliette Oskar Viktor]

[The alphabet above is from the Cambridge Encyclopedia of
Language. An alphabet with Alfa X-ray can be found in The
U.S. Department of Defense Dictionary of Military Terms.
Alfa Juliett X-ray, which is the ICAO version, appears in
A Concise Dictionary Of Slang And Unconventional English
and also a Langenscheidt dictionary]

[UK police use Indigo(???) instead of India.
German army handbook 90/91: Alfa Foxtrott Juliett.
Italian version: Alfa Charly FoxTrot Giuliet Romio Wiskey.
An Indonesian phrase book: Beta Ultra Volvo Whisky X-ray.
A precursor of the present alphabet (1952?) had: Alfa Coca
Metro Nectar Siera Union Whisky Extra]

Phonetics for digits (from an amateur radio FAQ):

zero one two tree fower fife six seven eight niner

From the Cambridge Encyclopedia of Language:

zero wun too tree fower fife six seven ait niner

'Telecom B':

[Note similarity to Apples Butter Charlie]

Alfred Benjamin Charles David Edward Frederick George Harry
Isaac Jack King London Mary Nellie Oliver Peter Queen Robert
Samuel Tommy Uncle Victor William Xray Yellow Zebra

[Found also in Swedish, Dutch, Hungarian telephone
directories. An 'analogy alphabet' in a Kenyan directory
has Charlie and no Y. A Swiss directory: Andrew Charlie
Lussy Queenie Sugar. French/German vocabulary books: Andrew
Charlie Lucy Mike Nelly Sugar Xmas. English phrase books
for Spanish/Italian speakers: Charlie. A 'British English'
alphabet in a Langenscheidt dictionary: Andrew Charlie Lucy

Queenie Sugar Xmas]

[Used as an English alphabet by telephone operators in Israel]

'British A':

Amsterdam Baltimore Casablanca Denmark Edison Florida Gallipoli Havana Italia Jerusalem Kilogramme Liverpool Madagascar New_York Oslo Paris Quebec Roma Santiago Tripoli Uppsala Valencia Washington Xantippe Yokohama Zurich

[An 'international' alphabet in a Dutch telephone directory has: Danemark. A 'French' alphabet in a Hungarian directory has: Cassablanka Danemark Que'bec Upsala Zu"rich.
An 'international' alphabet in a business book for French has: Italy Kilogram Zu"rich; the corresponding book for German has: Italy Kilogram Xanthippe Zu"rich.
An 'international' alphabet in a Langenscheidt dictionary: Danemark Madagaskar Que'bec Upsala Xanthippe Zu"rich]

[West Berlin telephone directory 1965: Danemark Je'rusalem Madagaskar Que'bec Upsala Xanthippe Zu"rich.
Santa Fe (Argentina) 1955: Dinamarca Habana Jerusale'n Kilogramo Nueva_York N~andubay Upsala Wa'shington Xantipo Yokoama.
Azores 1966: Danemark Ita'lia Jerusale'm New-York Que'bec Upsala Yokoham]

[Used as a French alphabet by telephone operators in Israel]

Bombay telephone directory 1962 (also a later source):

Army Brother Cinema Doctor English Father Gold Hotel India Jam King Lady Mother Navy Orange Paper Queen Raja Sister Table Uncle Victory Water X-ray Yellow Zero

Kenyan and Tanzanian telephone directories 1966:

Africa Bombay Charlie Durban England Freddie George Harry India Japan Kenya London Mombasa Nairobi Orange Peter Queen Robert Sugar Tanga Uganda Victory William X-Ray Yellow Zanzibar

Johannesburg telephone directory 1965:

[Note similarity to Alfred Benjamin]

Arthur Betty Charlie David Edward Frederick George Harry Isaac Jane Kate Lucy Mary Nellie Olive Peter Queen Robert Simon Thomas Union Violet William X-Ray York Zero

Malayan telephone directory 1964:

Australia Bombay China Denmark England Fiji Ghana Hongkong
India Japan Kedah London Malacca Norway Osaka Penang
Queensland Russia Singapore Turkey Uganda Victoria Wales
X'Ray Yokohama Zanzibar

Used by police in New York City:

[Note similarity to ARRL and Western Union]

Adam Boy Charlie David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Peter Queen Robert Sam Tom
Union Victor William X-ray Young Zebra

[Variants: Eddie Larry Nancy Thomas Yankee Yellow]

Used by police in Nassau County, Long Island, New York:

Adam Boston Chicago Denver Edward Frank George Henry Ida
John King Lincoln Mary Nancy Ocean Peter Queen Robert Sam
Thomas Union Victor William X-ray Young Zebra

Used by police in San Diego, California:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Queen Robert Sam Tom Unit
Victor William Xray Yellow Zebra

Used by police in Hutchinson, Kansas:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Q.. Robert Sam Tom Union
Victor William X-ray Yankee Zebra

Alternative phonetics sometimes used unofficially in amateur
radio:

America Boston Canada Denmark England France Germany
Honolulu Japan Kilowatt London Mexico Norway Ontario/Ocean
Pacific Radio Santiago/Spain Tokyo United Victoria
Washington Yokohama Zanzibar

[Also: Amsterdam, Baltimore, Brazil, Chile, Egypt, Finland,
Geneva, Greece, Guatemala, Hawaii, Italy, Kentucky, King,
Luxembourg, Montreal, Nicaragua, Portugal, Romania, Russia,
Sweden, Texas, Uruguay, Venezuela]

The ARRL (American Radio Relay League) alphabet (1948):

[Note similarity to Western Union and Able Baker]

Adam Baker Charlie David Edward Frank George Henry Ida John
king Lewis Mary Nancy Otto Peter queen Robert Susan Thomas
union Victor William x-ray young zebra

[Nowadays the ARRL endorses the NATO/ICAO/ITU alphabet]

Pre-1954 U.S. Navy Radio Alphabet:

(Communications Handbook, 1945)

[Note similarity to Able Buy Cast]

Able Baker Charlie Dog Easy Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tare Uncle Victor
William X-ray Yoke Zebra

[formerly used by IBM engineers for hex digits and pin
positions]

"Used by Armed services of USA & GB" (ARRL Handbook, 1945)

Able Baker ... Easy ... Tare ...

Allied Services 1945:

Able Baker ... Edward ... Tape ...

From a book entitled "The Complete Morse Instructor..." (1944):

Able Baker ... Easy ... Tare ...

RAF 1943-56:

Able-Afirm ... Item/Interrogatory ... Jig/Johnny ...
Nab/Negat ... Peter/Prep ...

[In similar alphabets: affirm, cast, hypo, inter, negat,
option, over, prep]

RAF 1942-43:

Apple Beer Charlie Dog Edward Freddy George Harry In
Jug/Johnny King Love Mother Nuts Orange Peter Queen
Roger/Robert Suga Tommy Uncle Vic William X-ray Yoke/Yorker
Zebra

[cf. aircraft in Dambusters raid: A-Apple B-Baker C-Charlie
E-Easy F-Freddie G-George H-Harry J-Johnny K-King L-Leather
(officially L-London) M-Mother N-Nuts O-Orange P-Popsie
S-Sugar T-Tommy W-Willie Y-York Z-Zebra]

Western Union:

Adams Boston Chicago Denver Easy Frank George Henry Ida John
King Lincoln Mary New_York Ocean Peter Queen Roger Sugar
Thomas Union Victor William X-ray Young Zero

British Army 1927:

Ack Beer Charlie Don Edward Freddy George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc
Uncle Vic William X-ray Yorker Zebra

RAF 1924-42:

Ac Beer Charlie Don Edward Freddie George Harry Ink Johnnie King London Monkey Nuts Orange Pip Queen Robert Sugar Toc Uncle Vic William X-ray Yorker Zebra

Royal Navy 1917:

Apples Butter Charlie Duff Edward Freddy George Harry Ink Johnnie King London Monkey Nuts Orange Pudding Queenie Robert Sugar Tommy Uncle Vinegar Willie Xerxes Yellow Zebra

U.S. Army 1916:

Able Buy Cast Dock Easy Fox George Have Item Jig King Love Mike Nap Opal Pup Quack Rush Sail Tape Unit Vice Watch X-ray Yoke Zed

British forces 1904:

Ack Beer C D E F G H I J K L Emma N O Pip Q R Esses Toc U Vic W X Y Z

[The OED has a reference for Beer and Emma dated 1891]

6182. Magnetic vs. Carbon Core Plug Wires for Mobile RFI

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-21 00:00:00 UTC
From: mikecooper@ti.com
Message-ID: <5guq8k$2up$1@ganesh.mc.ti.com>
Source record: 202055

Does anyone know which type of spark plug wire is best for reducing HF mobile RFI:

The newer Spiral Wound Magnetic Core or Conventional Carbon Resistance Core?

As far as I know, the Spiral Wound Magnetic core is only an aftermarket product. My guess is that it is very good for VHF and above (based on ferrite behaviour) and probably doesn't work as well below about 30 MHz.

I would like to hear anyone's opinion or experience.

If you're a ham, then you should MAKE your own antenna.
A discone would serve the purpose for 2-meter/440. For big gain,
add a corner reflector. (BUY an antenna, indeed.. we hams are
going to lose our reputation for being cheap if we don't watch out :)

Although it does make sense (at least in English), SOS doesn't stand for anything in particular. It's just a stream of dits and dahs that's very recognizable that was agreed to internationally (i.e. wasn't being used for something else and the committees liked).

There are other hams wanting to have a QSO with you, on-line. Visit my website at

http://www.esdi.com/log-it

and check out the dedicated Amateur Radio Chat Shack rooms. You can discuss all kinds of things with people from all over the world, just like on the air, except there is no QSB, QRN or QRM. Each room even has its own "Ignore Filter" for those few times when a QRMer enters. This filter completely wipes out the QRMer !

There are rooms for Rag Chew, DX, Traffic Nets, Trader Nets, and computers.

You can access the Chat Shack 24 hours a day. When the bands are closed, you can use the Chat Shack to maintain contact !

There are lots of other things to see and do there also. A Bulletin Board for listing that extra equipment, posting messages or keeping in touch. Lots of shareware downloads too !

Come visit !

I recently purchased the Yaesu FT-50R and I love it. It not only gives you
2m and 440, but also scans most of the area from 79 to 1 gig.
It is very compact and very versatile. You can also get the ADMS software
to program it if you have a computer. I would suggest spending the extra
$40 for this software. I got mine from HRO for $309 plus the $40 for the
software.

Seattle, WA March 21, 1997
To all radio amateurs

SB PROP ARL ARLP012
ARLP012 Propagation de KT7H

The biggest news this week was that we are at the equinox, and hours of daylight are about equal between the northern and southern hemispheres. Look for improved worldwide conditions on HF bands as we head into spring. Otherwise, there has been no improvement in solar activity, with conditions last week showing no significant change over the previous week. Solar flux and sunspot numbers were only slightly higher, and on four days the solar flux was just slightly above the average of 75 for the previous 90 days.

The outlook for the next few weeks has solar flux remaining in the mid 70s, with a rise in geomagnetic disturbances centered around March 26 and 27. The March 1997 issue of the magazine Scientific American has a remarkable article about the Solar and Heliospheric Observatory (SOHO), which is held in the point where the Earth's and Sun's gravitational pulls are equal, some 1 million miles toward the Sun from Earth. There is an extensive gallery of images from the data transmitted from the satellite on the Web at http://sohowww.nascom.nasa.gov.

Sunspot numbers for March 13 through 19 were 18, 43, 42, 25, 15, 24 and 0, respectively, with a mean of 23.9. The 10.7 cm flux was 74.1, 75.5, 75.8, 75.7, 75.1, 74.3 and 73.7, respectively, with a mean of 74.9. Estimated planetary A indices for the same period were 7, 4, 6, 8, 5, 6, and 4, respectively, with a mean of 5.7.

NASA TV moves

RADIO AMATEUR CALLBOOK GOES CD-ROM ONLY

It's the end of an era for The Radio Amateur Callbook. Publisher Bob Hughes announced March 17 in a letter to Callbook distributors that the comany is phasing out its telephone-book-size paper North American and international editions in favor of its CD-ROM product. The 1997 Callbook--the 75th edition--will be the last hard-copy version available. The letter cited "rising costs and increasing demand for electronic publishing" as the reasons for the company's decision to concentrate on the CD-ROM version, which includes worldwide listings. North American and international editions of the paper Callbook, a staple for years in many active ham shacks, sell for around $40, while the CD-ROM sells for around $50. The Callbook began publishing in 1920. Radio Amateur Callbook is produced by Watson-Guptill Publications.

The spring CD-ROM edition of the Callbook will be available at the Dayton Hamfest, Hughes told distributors.

According to Hughes' letter, the company has "a limited supply of the printed edition" and anticipates that demand will be great once the word

gets out. The last printed version will carry a label indicating "Last Edition of the Callbook." (For orders, call 800-278-8477; e-mail 103424.2142@compuserve.com.)

LEAGUE PETITIONS FOR RACES FLEXIBILITY

The ARRL is seeking a change in FCC rules to relax regulations regarding the Amateur Radio Service and the Radio Amateur Civil Emergency Service (RACES). The League wants the FCC to allow hams actively supporting emergency or disaster communication or involved in drills and tests to communicate "between and among" RACES stations and those stations registered with civil defense organizations operating under RACES. The League also wants the FCC to relax time limitations on RACES emergency drills and tests. This would permit stations operating under RACES (organized under the Federal Emergency Management Agency and operating under local civil defense agencies) to communicate, as necessary during emergencies, tests and drills, with stations operating under the Amateur Radio Emergency Service, or ARES (begun by the ARRL in 1935) or with other non-ARES or non-RACES-stations also engaged in emergency communication or drills. Right now, RACES and ARES operate independently of each other, although some hams participate in both organizations.

Relaxing the rules "would permit intercommunication with other amateurs active in emergency communications, and enable a form of 'mutual aid' in the Amateur Service," the League said in its filing. "It is time that the Commission permit, but not require, communications between RACES participants and non-RACES amateurs during emergencies or emergency drills and preparedness exercises." The League said the Commission has an opportunity to eliminate a restriction that "arguably should never have been enacted in the first place," and that has "outlived whatever utility it may ever have had."

The League also seeks to increase the time limit on RACES training drills and tests from one hour per week to up to five hours per week.

PHASE 3D COMES ALIVE!

"Phase 3D is alive and doing very well!" says AMSAT-DL Vice President Werner Haas, DJ5KQ. In late February and early March, members of a combined international team working at the P3D Lab in Orlando, Florida, completed major integration milestones for assembly and checkout of the Phase 3D satellite.

The combined team installed, powered-up and extensively tested the satellite's main power and internal housekeeping computer (IHU) systems as well as transmitters for X-band, V-band and U-band. All performed without problem. In addition, all of the spacecraft's many communication receivers have been built into the satellite and thoroughly tested and are working well. The SCOPE camera experiment--built by JAMSAT, the Japanese AMSAT group--was successfully installed and powered up while in the spacecraft.

Phase 3D's IF switching matrix, which will allow almost any receiver to be cross-linked to any transmitter was successfully brought on line aboard the

spacecraft, along with the LEILA experiment (strong signal attenuator). And a major milestone was attained on March 4, when team members Haas, Peter Guelzow, DB2OS; Keith Baker, KB1SF; Stan Wood, WA4NFY; and Lou McFadin, W5DID, completed the first QSOs via Phase 3D's configuration U/V "transponder." For this test, P3D's U-band receiver was cross-linked to the V-band transmitter through the IF Matrix.

What's more, the distinctive "warble" warning tone and notch capabilities of P3D's LEILA were clearly demonstrated when Wood deliberately overpowered his SSB "uplink" signal, thus triggering LEILA to superimpose its warning tone on his "downlink" signal. When Wood persisted in overpowering the uplink, team members then watched in amazement as the LEILA cut his downlink signal via P3D's V-band amplifier from some 140 W to about 2 W!

Team members report that Phase 3D's final integration and checkout is on schedule for its anticipated launch in July.--AMSAT News Service

STS-83 HAMS LOOKING FORWARD TO SAREX QSOs

At a NASA press conference on March 18, several of the astronauts scheduled for shuttle mission STS-83 talked about their planned Amateur Radio activities. "It would be my privilege to do a number of SAREX contacts," said Jim Halsell, KC5RNI, the mission commander. Eighteen schools are on the list for SAREX contacts during the mission, set to launch April 3. Janice Voss, KC5BTJ, said she got her license because she's in the shuttle program. "I think the SAREX program is a great chance to connect the flights with people on the ground," she said. "I wanted to make sure that, at least when I flew, there would be a chance for SAREX to fly because I would know that there was one ham radio operator on board."

Calling himself a strong supporter of SAREX, Donald Thomas, KC5FVF, lauded the objectives of the SAREX program to educate youngsters and get them involved in math and science. "It's just amazing how the kids get so excited and enthused about the passes we have." During the average eight to ten-minute pass, Thomas said, the kids "just fire questions off to us, and you can just hear and feel the enthusiasm they have." Thomas said he's glad to share in their excitement with SAREX.--Philip Chien, KC4YER

ANNIVERSARY MARKS MILESTONE OF US PRESENCE IN SPACE

Saturday, March 22, marks the first anniversary of a continuous US presence in space, which began with the launch of astronaut Shannon Lucid aboard space shuttle Atlantis on the STS-76 mission to the Mir space station. Since Lucid arrived on Mir, astronauts John Blaha, KC5TZQ, and Jerry Linenger, KC5HBR, have followed in her footsteps, conducting continuous scientific experiments aboard the Russian complex as a precursor to the development and occupancy of the International Space Station.

Linenger assured students at Booker T. Washington High School in Houston, Texas, this week that all aboard the space station are in good shape after a fire aboard Mir late last month. About three dozen students got to chat with Linenger March 17 and posed more than a dozen questions during the ten-minute contact. Linenger also discussed the effects of the fire on

experiments and described the escape arrangements available to those aboard Mir.

On March 11, students at United South High School, Laredo, Texas, successfully spoke with Linenger via ham radio. Other Mir school QSOs are tentatively scheduled to happen between now and April 20, 1997.

Linenger will remain aboard Mir until mid-May, when he will be replaced by astronaut Mike Foale, KB5UAC, who, in turn, will be replaced in September by astronaut Wendy Lawrence, KC5KII. The last US astronaut scheduled for a tour of duty on the Mir is David Wolf, KC5VPF, in early 1998.

Former astronaut Norm Thagard was the first US astronaut to live and work on Mir. Lucid spent a US-record 188 days in space from the time of her launch on March 22, 1996, to her return to Earth on the STS-79 mission on September 26, 1996. Blaha, who arrived on the STS-79 mission on September 16 last year, spent 128 days in space, returning to Earth aboard Atlantis at the completion of the STS-81 mission on January 22, 1997. Linenger was launched on the STS-81 mission on January 12.--NASA

"ROCKOON" BEARING ATV TO LAUNCH MARCH 22

A small group of space enthusiasts--including several hams--will attempt to make space history March 22 by sending the first amateur rocket--and the first hybrid rocket into space ever--into space from a spot off the coast of southeast North Carolina. The rocket will carry ATV and APRS systems.

The Huntsville Alabama L5 Society (HAL5)--a chapter of the grassroots National Space Society (NSS)--has spent the past two years developing and testing components for a "rockoon"--a rocket launched from a high-altitude balloon, which will be released from an inland site. The HAL5 program is called Project HALO, for High Altitude Lift-Off. Rockoons were first flown by James Van Allen in the 1950s as part of a joint Navy-university project. This approach allows a small rocket to obtain a very high altitude because there is little air to limit acceleration during launch. The command to launch the rocket will be sent only once the balloon is safely over open ocean and the rocket is pointed away from land.

According to Bill Brown, WB8ELK, the balloon gondola will carry an amateur television (ATV) camera to record the launch live and transmit the color video back to Earth. Brown, who calls himself the "Balloonmeister" built the launch platform ATV station, which will transmit on 434.00 MHz--cable-ready TV channel 59. The rocket itself also will carry an ATV camera--a smaller B&W model--with a transmitter on 1280 MHz (FM), plus a packet station on 441.050 MHz FM with APRS GPS location-altitude formatted data. Ed Myszka, KE4ROC, designed the rocket nose cone electronics section and installed the 1280-MHz ATV transmitter built by Richard Goode W8RVH and Hank Cantrell W4HTB. The group estimates that the 1280-MHz ATV transmitter will have a 750-mile-wide footprint at the rocket's peak altitude of 450,000 feet. HF nets will convene on 3.820 and 7.155 MHz.

The solid fuel used for the HALO rocket is asphalt, the same material used on streets and roofs. The liquid oxidizer used for the rocket is nitrous

oxide (the same "laughing gas" used by dentists). If it successfully exceeds an altitude of 50 nautical miles (300,000 feet), the garage-built HALO hybrid rocket will become the first of its kind to ever make it into space.

Altitude verification for the rocket will be primarily based on signals from an onboard GPS receiver. Backup will come from the B&W TV camera, which is oriented so that the curvature of the Earth can be viewed, recorded, and later measured to estimate the altitude. The team hopes to recover both the rocket and the balloon gondola.

Other hams involved in the project include: Gene Young, K4ZQM, who helped with final integration and wiring of the rocket system; Gene Marcus, W3PM, John Fox WB2LLB, and Barry Lankford, N4MSJ, who will set up the ground station for the event; Ben Frink, KD4BFG, who arranged the launch site and will operate the talk-in frequency on 2 meters; and Dick Goodman, WA3USG, and Hank Cantrell, W4HTB, who will operate the HF net during the event.

The balloon launch is set for 6:30 AM Eastern Time on March 22. In case of windy or rainy weather, the launch will be postponed until March 23 or March 24. For more details check the HALO Web site at http://iquest.com/~hal5/HALO/SL-1/ or e-mail hal5@iquest.com.

EIMAC SELLS GLASS-TUBE DIVISION

Eimac is out of the glass-tube business. The former Eimac glass-tube manufacturing facility has been sold and relocated from Salt Lake City, Utah, to Easton, Pennsylvania. The new company, Triton, moved the former Eimac plant "lock, stock and barrel" from Utah to Pennsylvania, said Mark Hoffman, a senior scientist at Triton. In all, it took 16 tractor-trailer loads to move the plant's manufacturing equipment and inventories across the country. For now, Triton is manufacturing 46 different Eimac and Westinghouse tube types, including the popular 3-500Z, 4-400A and 4-400C. Right now, Triton does not make the 6146, 572B, 811A or 4-1000A, but Hoffman did not rule out the possibility that the company may tool up to manufacture those tubes in the future. Triton also makes glass tube chimneys and sockets.

Hams interested in obtaining small quantities of Triton tubes should contact the company's distributor, Richardson Electronics, Lafox, Illinois; tel 800-323-1770.

Eimac--recently purchased by an investment group, Communications and Power Industries--continues to make and rebuild ceramic external-anode tubes. It has been relocated to Palo Alto, California.

OPERATIONS APPROVED FOR DXCC CREDIT

The ARRL DXCC Desk reports that documentation from the following operations now has been received and approved for DXCC credit: 3A/IK1QBT, 3A/JH1NBN, 3B8/DK1RP, 3CODX, 3C1DX, 3C5A, 3D2/DL7RAG, 3D2HW, 3D2MN, 3DAOMA, 3W5RS, 4L6PA, 4X/DL3JSW, 5H1HW, 5R8EO, 5T5U, 5V7HR, 5V7ML, 5V7LB, 5WOAN, 5WOHW, 5X1D, 5X1K, 5X1T, 6W1/N2WCQ, 6W1QV, 6Y5/I5JHW, 6Y5/W4JKC, 7P8FS, 7P8MA, 8Q7BC, 8Q7YV, 8Q7ZR, 9G5BQ, 9J2AE, 9J2PI, 9L1MG, 9L1PG, 9MOZ, 9M2RY, 9M6P,

SOLAR UPDATE: CONDITIONS LOOKING UP?

Sun watcher Tad Cook, KT7H, Seattle, Washington, reports: The biggest news this week is that we are at the equinox, and hours of daylight are about equal between the northern and southern hemispheres. Look for improved worldwide conditions on HF bands as we head into spring. Otherwise, there has been no improvement in solar activity, with conditions last week showing no significant change over the previous week. Solar flux and sunspot numbers were only slightly higher, and on four days the solar flux was just slightly above the average of 75 for the previous 90 days.

The outlook for the next few weeks has solar flux remaining in the mid-70s, with a rise in geomagnetic disturbances centered around March 26 and 27. The March 1997 issue of the magazine Scientific American has a remarkable article about the Solar and Heliospheric Observatory (SOHO), which is held in the point where the Earth's and Sun's gravitational pulls are equal, some 1 million miles toward the Sun from Earth. There is an extensive gallery of images from the data transmitted from the satellite on the Web at http://sohowww.nascom.nasa.gov.

Sunspot numbers for March 13 through 19 were 18, 43, 42, 25, 15, 24 and 0, respectively, with a mean of 23.9. The 10.7-cm flux was 74.1, 75.5, 75.8, 75.7, 75.1, 74.3 and 73.7, respectively, with a mean of 74.9. Estimated planetary A indices for the same period were 7, 4, 6, 8, 5, 6, and 4, respectively, with a mean of 5.7.

IN BRIEF:

* Henry Radio closes ham retail store: Citing competitive pressures, veteran ham radio retailer Henry Radio has closed its Los Angeles retail store. Ted Henry Jr, W6YEY, said Henry will continue its amplifier and commercial lines, but--with the closing of the LA store--no longer has a "storefront" retail operation. He said Henry Radio will continue to sell some ham radio equipment via mail order. Henry said ham radio retailing was "not a profitable business for us and has not been for a number of years." The store closing eliminated eight jobs. Henry Radio opened in Butler, Missouri,

in 1927.

* Ham hospitality at NAB: Broadcasters visiting Las Vegas for the 1997 National Association of Broadcasters Convention April 7-10 are invited to use the Las Vegas Radio Amateur Club's repeaters. The 2-meter repeater is at 146.94 MHz and the 70-cm machine is at 449.7 MHz (standard offsets). The Amateur Radio operators' reception is April 9, 6-8 PM. For more information, contact Steve Scott, KD8S, tel 702-382-2121; e-mail kd8s@skylink.net.

* Hams in the media: Marque Marriott, N7LWQ, of Astoria, Oregon, and his ham shack were prominently displayed on the front page of The Daily Astorian for February 17. The feature article, "Calling all Hams . . . trouble's brewing," talks about how hams help out when disaster cuts off conventional means of communication. The City of Astoria designated February as Volunteer Radio Operators Appreciation Month to recognize the contributions hams made during flooding in 1996. Another ham, Alene Linehan, KA7CXP, is also quoted in the article.

* NASA TV moves: On March 15, NASA Television (NTV) began broadcasting via a new satellite that will allow reception by a wider audience throughout the continental US, Alaska and Hawaii. NTV now is available on GE-2, transponder 9C at 85(W, vertical polarization, at 3880 MHz, and audio at 6.8 MHz. NASA Television provides real-time coverage of agency activities and missions as well as resource video to the news media, and educational programming to teachers, students and the general public.--AMSAT News Service

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs.

* The HIRAM BBS: 860-594-0306.

* The ARRL Technical Information Server (Info Server): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

To all radio amateurs

SB QST ARL ARLB016
ARLB016 League petitions for RACES flexibility

The ARRL is seeking a change in FCC rules to relax regulations regarding the Amateur Radio Service and the Radio Amateur Civil Emergency Service (RACES). The League wants the FCC to allow hams actively supporting emergency or disaster communication or involved in drills and tests to communicate ''between and among'' RACES stations and those stations registered with civil defense organizations operating under RACES. The League also wants the FCC to relax time limitations on RACES emergency drills and tests. This would permit stations operating under RACES (organized under the Federal Emergency Management Agency and operating under local civil defense agencies) to communicate, as necessary during emergencies, tests and drills, with stations operating under the Amateur Radio Emergency Service, or ARES (begun by the ARRL in 1935) or with other non-ARES or non-RACES stations also engaged in emergency communication or drills. Right now, RACES and ARES operate independently of each other, although some hams participate in both organizations.

Relaxing the rules ''would permit intercommunication with other amateurs active in emergency communications, and enable a form of 'mutual aid' in the Amateur Service,'' the League said in its filing. ''It is time that the Commission permit, but not require, communications between RACES participants and non-RACES amateurs during emergencies or emergency drills and preparedness exercises.'' The League said the Commission has an opportunity to eliminate a restriction that ''arguably should never have been enacted in the first place,'' and that has ''outlived whatever utility it may ever have had.''

The League also seeks to increase the time limit on RACES training drills and tests from one hour per week to up to five hours per week.

Hello everyone!
I am trying to start a mailing list that is just a general ham radio chat group. I don't know if it is working properly yet or not, but if you would like to try to join the list, just send an e-mail message to: ragchew@webguy.mwci.net with the subject and the first line of the message being "subscribe" (without quotes of course..)

There is no one on the list right now, and I am curious to see if it even works yet. Please give it a try. If you get subscribed, send a message to the list and I will get it.

Thanks for your help!

I am the QSL/Contest/Awards manager for the Husky Amateur Radio Club, W8YY (ex W9YX), which is the amateur radio club on the campus of Michigan Technological University. We are currently working on getting our initial Worked All States award, and we are one state short. As the subject implies, that state is South Dakota. I would really appreciate it if someone from South Dakota would be willing to set up a schedule with me on HF so we can get the QSL card from South Dakota. Of course, we will send you one of ours, and we can even include return postage. We can operate CW, SSB, or even RTTY--your choice. I personally don't have the steadiest hand in the world for the code so SSB is preferred but I will be happy to do CW if that is what you want.

The best time for any of us up here is after 6 PM (except Thursdays). We can chew the rag for a while if you want or just exchange all of the relevant info. We would _really_ appreciate this, so if you can spare the time for a QSO on 80, 40, 30, 20, 17, 12, or 10 M, just let me know at jdhaas@mtu.edu and we will work something out. Thanks much!

Albiet, not very efficient. Despite this, changing the "filtration method"
(I.E., eliminate code and have tougher theory tests) WON'T save the ham radio
as others claim.

I'm all for eliminating testing altogether. Mail in a form to get your license
and join in on the fun. This would give ham radio the boost it really needs.

Len Anderson hit the bullseye here. My father worked in communications
for New York Fire Dept. and the same happened many times while I was
a child. God knows what they have today but 50KW gens and 300' towers
were bought to COMMUNICATE which is why they are PROFESSIONALS and
we are called AMATEURS! The problems that would and are encountered
with ham intervention tend to confuse a situation. I do not them
handling everything as a formal message but realtime dispatch and
dynamic
routing of required communications. Voice nets would be too slow
for a fire/police dept to handle emergencies. They might use hams
as "spotters" so to speak but not as primary. RACES can be great.
I also think SkyWarn is great and I have participated many times
and I was not a member or formally trained.

BTW:They DO NOT use CW during emergencies:

Len Anderson wrote:

January 17, 1994, Los Angeles area shortly after 4:30 AM, a
Richter 6.4 earthquake centered on the suburb of Northrdige is
felt over a wide area, causing much structural damage. An area of
about 30 by 60 miles with a population of over 8 million has all its
electrical power lost as the local power grid trips off the
Pacific Intertie connection. Within minutes all public safety
communications base stations are running on auto-start emergency
generators. Fire departments in four dozen incorporated cities roll
out their equipment on standby, alerted by dedicated landline
alarms.
Utility services also power up their base stations on emergency
generators and begin calling in repair crews. Central coordination
from the disaster comm center under L.A. city hall is functioning as
soon as crews can reach the sub-basement location. Dozens of
in-place public safety radio nets go to disaster mode. Some fire
engine companies are rolling within minutes to fires started by the
quake, alerted by landline and radio.

There are no cellular telephones involved with the dedicated
landlines that don't go through the telco switching centers. Solar
cells aren't involved with base stations needing KiloWatts of
electrical power now supplied by motor generator sets in darkness.
Public safety services need communications NOW, not hours later.
They have it.

The very REAL communications networks were up and running, staffed
by

good people who knew what they were doing and had the equipment to
do
the job they do. I was there and experienced it.

I'm not knocking the RACES over the country that can contribute to
disaster relief. I'm objecting to the trite, overworked phrases
such
that "only amateur radio can get through when the cellular phones
are
down." Local government public safety organizations around here ARE
organized, drill, have the equipment to do their job without needing
outsiders. They have backup plans to backup plans, can do work-
arounds to keep themselves communicating. Instead of fantasizing on
some imaginary role that amateur radio plays in "disasters," RACES
groups should go out and plan with the professionals, drill with
them
if they can become part of the team, learn a little about how REAL
emergency comm is done by REAL people who do that 24 hours a day.

Len, my hat is off to you. You have been there to see it first hand.
I am glad someone understands what I meant in my original posting.

The Ham Radio Reality gap grows...

Okay, are we done with all the speculation? Good - let's get down to
business.

SOS was chosen at the Berlin International Conference of 1906.

The signal SOS (..._____...) has no meaning as a group of letters.
``Save our souls'', et cetera, are phrases that had no place in
the minds of those devising the call, which is merely an easily
identifiable group of characters selected for this purpose. A
carry-over from land telegraph, CQD had been used - CQ for the
call with D added for distress. On February 1, 1904, the Marconi
Company had chosen CQD as the urgent distress signal for use
by its ship stations (see Karl Baarslag's book SOS TO THE
RESCUE, (New York, 1935), pages 5-6). At the 1906 conference
the Germans had argued for the call SOE, but this was rejected
in favor of SOS, shich had a more decisive and easily identifiable
final letter. The Republic used CQD; the Titanic, both CQD and SOS.

See George Arthur Codding's book THE INTERNATIONAL TELECOMMUNICATIONS
UNION, AN EXPERIMENT IN INTERNATIONAL COOPERATION (Leiden: E.J.
Brill, 1952).

The distress message a ship sends has to follow a strict format
dictated by the ITU. Preferable, a distressed ship would wait until
a silent period (minute 45 to 48, or minute 15 to minute 18)
on 500 kHz. During those two 3-minute periods all transmissions
worldwide cease - everyone cranks up the volume and keeps a sharp
listen (ITU dictates you QRT even if you're on another freq'y -
you must return to 500 kHz for those silent periods).

The ship station in distress would then send a series of twelve
4-second dashes, with 1-second pauses; this is called the Auto
Alarm signal. After only four such properly sent dashes are received
by any other ship's receiver, relays clamp shut causing alarm
bells to start ringing and lights to flash on the bridge and in

the radio room (and in the radio officer's sleeping quarters)
Thus any ship within receiving range of the distressed ship will
be alerted to an upcoming urgent broadcast.

(Shore stations are permitted to also send the Auto Alarm signal -
I had to do it for a DDD SOS broadcast; every ship in the entire
Pacific copied that "wake up call" from our 10kW transmitter!)

Now the distressed ship is supposed to wait 2 minutes (if possible),
for off-duty radio officers on other ships to run to their radio rooms
to shut off the bells and listen for the message.

Now the ship sends: SOS SOS SOS CQ DE <callsign 3X> <gives cause
of distress, QTH, assistance needed, POB, sea and WX conditions,
direction of drift, et cetera> BT MASTER AR K

Then come the responses - from this point on, all transmissions
from all ships and shore stations must begin with SOS.

Included below is an actual distress situation taken from my log
while at Coast Guard Radio Honolulu, NMO.

Jeff KH2PZ

----------Begin Part 6 of The 500kc Story----------

Copyright 1994 by Jeffrey Herman - All Rights Reserved.
Permission is given to publish this piece as long as no monetary
gain is to be made. Please notify me prior to publishing.

In the following true narrative the ship's name and her callsign
have been changed.

Part 6: My First SOS at NMO

As mentioned in an earlier part I always sat the 12 hour 500 kc
night watch on my duty nights; I loved listening to the steady
flow of calls from ships in far off waters. Even though we sat
in the Central Pacific I would sometimes even copy a fluttery East
Coast US shore station. Throughout the night I would hear ghostly
signals, just above the noise level, that would fade in and out from
who knows where. We had an extensive receiving network that stretched
over several miles, and NMO sat in a very electrically quiet region.
We were able to copy any ship or shore station anywhere in the Pacific.

One evening, feeling a bit drowsy (0200 local!), I thought I was dreaming
when I heard a long dash, a pause, another long dash, a pause, another
long dash, a pause, ...
Like an electric shock, adrenalin flooded through me at
the speed of light - OH MY GOD - SOMEONE IS SENDING AN AUTO ALARM!
My eyes shot to the clock to time the dashes: 4 seconds on, 1 second
off, 4 seconds on, 1 second off - those 12 long dashes almost froze me.
I yelled into the intercom to the chief `Auto Alarm on 500' knowing
at the same time alarm bells were ringing on board every ship scattered

around the Pacific within radio range of the distressed ship. Recall that when a shipboard operator goes off watch, ITU rules dictate he leaves a receiver tuned to 500 kc with a decoder attached - if that decoder hears at least four 4-second dashes each with 1-second seperation, relays in the decoder will clamp shut triggering alarm bells in the radio room, in the radio officer's sleeping quarters, and up on the bridge, to warn of a distress message about to be sent on 500 kc. AAs on 500 kc are *never* sent except when a ship is in distress. This was the first one I'd heard since my radioman school days; I can't put into words the terror I felt while sitting out the ITU-required 2 minute wait (recall that the ITU dictates every step the distressed vessel's radio officer takes: Auto Alarm, then the 2-minute wait [if possible] for off-duty ops on other ships, woken by their Auto Alarm receivers, to race to their radio shacks to copy the distress). 500 kc was now in an extended silent period (see part 2 or 3 [or 4?]). Someone started tuning up and was immediately pounced on by myself: QRT SOS was all I needed to send - dead silence. One of the Australian shore stations was sending a CQ at the same time the AA went out - he must have heard the AA through his CQ for he stopped in mid broadcast. Nothing but an occasional static crash - dead silence. Throughout my brief 500kc career there had never been a silence like this I thought. Then it came:

SOS SOS SOS CQ DE DJNK DJNK DJNK SOS BT MV PANAMA TRADER HULL CRACKED IN HEAVY SEAS MAJOR FLOODING 42-27N 42-27N 178-51W 178-51W NOW ABANDONING SHIP SOS BT MASTER AR K

Then came the 10 second-long dash (ITU: for direction finding).

I was first - in A2 I sent:

SOS DJNK DJND DJNK DE NMO NMO NMO RRR SOS

and after me 500 kc was flooded with ships and shore stations sending sending the ITU response: RRR SOS:

SOS DJNK DJNK DJNK DE NMC NMC NMC RRR SOS (San Francisco)
SOS DJNK DJNK DJNK DE NOJ NOJ NOJ RRR SOS (Alaska)
SOS DJNK DJNK DJNK DE NMQ NMQ NMQ RRR SOS (Long Beach, CA)
SOS DJNK DJNK DJNK DE KPH KPH KPH RRR SOS (San Fran.)

<ITU dictates a strict format to follow in distresses - from now on every transmission must be proceeded with the SOS prosign>

along with KFS in California, NRV in Guam, a couple Japan shore stations; the radio operator aboard DJNK must have breathed a sigh of relief and taken some comfort knowing his message was heard by so many.

Once the RRR SOS replies ceased NMO took control; I asked the standard questions for situations such as this:

SOS DJNK DE NMO BT NEED FOLLOWING INFO
NR OF POB (number of persons on board)

CSE (course)
HULL ES SS COLOR (hull and superstructure colors)
NR OF BOATS (number of lifeboats)
BOAT RADIO FREQS, EPIRB
WX, WIND SPD ES DIR, SWELL HT ES DIRECTION, CURRENT (weather and sea data)
BT SOS K

and DJNK patiently answered each.

After getting these important answers I had the uncomfortable
task of asking:

SOS DJNK DE NMO BT OM PSE CL KEY BEFORE U LV OK? K

SOS NMO DE DJNK WILL DO OM

Every shipboard telegraph key has a switch which, when closed,
will continuously cause the ship's radio to transmit. This enables
rescue aircraft to home in on the distressed vessel using their
direction finding equipment. I had asked the op to close his key
switch before he leaves the ship.

At the same time our AMVER computer was generating a printout of the
locations of ships transiting the North Pacific: No ships were in DJNK's
area! At least no AMVER reporting ships; it's possible there was a ship
close to DJNK that wasn't sending us his AMVER position reports. A
very slim possibility but a chance we couldn't ignore. I was ordered
by our Rescue Center to send the DDD SOS, i.e. to relay DJNK's distress
message from our 10 kW transmitter. In A2 I sent:

AUTO ALARM (12 four second dashes with a one second pauses)

then with my hand shaking, clenching the key:

DDD SOS SOS SOS DDD CQ DE NMO NMO NMO SOS BT <DJNK's message>
BT ANY SHIPS IN AREA DIVERT AND ASSIST SIGNED US COAST GUARD
AR DDD SOS K

Dead silence reigned for minutes that seemed like hours. An
awful, awful feeling of helplessness overcame me as I sat in
that chair with the entire NMO crew standing in silence - all of
us knowing at that very moment men were perishing in an icy ocean...

Already we had aircraft in the air heading to DJNK's position
so I notified him:

SOS DJNK DJNK DE NMO NMO BT USCG AIRCRAFT LAUNCHED TO UR POSN
ETA 3 HRS BT HOWS UR COND? K

SOS NMO DE DJNK HV TO LEAVE SHIP NOW TU OM FER <high pitched whine>

His transmitter had emitted a - a scream - it actually screamed!
I turned to the Chief asking ``Is that...?'' ``Yes, the ocean water
just flooded his radio room shorting out his transmitter and
batteries.''

I couldn't accept this - the man at that key couldn't have just perished! I sent:

SOS DJNK DE NMO
<silence>
SOS DJNK DJNK DE NMO
<silence>

At this point the Chief put his hand on my shoulder and only said ``He can't answer you - he's gone.''

Throughout the night at 15 minute intervals I continued to send the Auto Alarm and the DDD SOS to no avail. At daybreak our aircraft reported seeing only debris: bales of hay, which was the cargo of DJNK; no lifeboats, no bodies, only debris.

Even to this day I sometimes hear, in my sleep, the scream DJNK's transmitter emitted that terrifying and horrible night. I pray the crew of that ship rest in peace.

End of Part 6.

Careful Sandy - the most notorious "gay-basher" in history distroyed
an entire city, Sodom, due to his outrage at the inhabitants behaviour.
You can read about it in the Old Testament in the Bible.

>YOU were WRONG ... by a factor of 10^6 or 60dB ...
>It's OBVIOUS what YOU don't understand ... (simple unit conversions)

You're worse than an uku, or even a remora. Okay, let's look at
the above example I gave, 5mW = 5W * 10^(-3), and apply the base
ten logarthm function to both sides: log(5mW) = log(5W) - 3,
and now multiply both sides by ten: 10*log(5mW) = 10*log(5W) - 30.
That's the example I had in mind when I wrote my previous message.
Of course, it's a bit artificial since we don't leave units of measure
(mW, W) within a function.

>And you purport to teach mathematics at the university level? Talk
>about "the dumbing down of American education!"

Nothing wrong with what I've written. But for you to be eligible to
comment about education you need to first have an education, Carl.
When you finally finish your college degree then we can talk.
(Does your boss know he hired an "EE" with no degree?)

Source record: 201979

I am wondering when the practice of running amateur stations at World Scout Jamborees started.

I know of the one at the World Jamboree in the UK in 1957. Leslie Mitchell, G3BHK, who was one of the operators at the Jamboree station instigated the Jamborees on the Air. And I was at the one in Norway in 1975, helping to run the amateur station, LC1J.

I understand that there have been amateur radio stations at all subsequent World Jamborees (1959, Mt Makiling, Phillipines; 1963, Marathon, Greece; 1967, Farragut State Park, USA; 1971, Assagiri Heights, Japan; 1975, Lillehamer, Norway; 1983, Calgary, Canada; 1987/88 Sydney, Australia; 1993, Holland). If I am wrong, could someone please correct me.

Prior to the World Jamboree in the UK, there was one at Niagara on the Lake, Canada in 1955.

The next previous was at Bad Ischl, Austria in 1951, and before then at Moisson, France in 1947.

Then there was a gap due to the war.

Does anyone out there know whether there were amateur stations at Moisson, Bad Ischl, or Niagara on the Lake?

Does anyone know of any amateur stations at pre war World Jamborees?

Jim Parnell. ZL2APE.

Do what I did when I was active. I just spent about 80% of my on air
time on CW in the novice portions of the band. You get to help the
beginners with their code, and you (usually) get practice copying less
than perfect code.

Yaesu FT-890 AT Compact HF Rig with built in Automatic Tuner.
Extremely light use. Approximately 30 total contacts is total usage.
In perfect shape, like brand new with all the original boxes and
packing.

100 watts power on all HF bands. IF shift and IF notch filter. Four
microprocessors provide the easiest possible control interface. Two
independent VFOs for each band (20 total) hold their own frequencies
and modes as well as clarifier offsets and repeater shifts. 32
memories store data for the VFOs giving a total of 84 independent sets
of frequency, mode and other selections. Noise blanker, all mode
squelch, 4 function multimeter, and AF speech compressor with
adjustable IF passband shift. Iambic memory keyer for CW with dot-dash
memory.

Top panel heatsink allows this radio to run cool at all times and with
an internally switched fan, it allows full transmitter output without
any rear panel protrusions.

Add CAT control to hook this fine radio up to your computer.

Perfect shape and like brand new. $850.00, buyer to pay shiipping.

Paul,
The FCC did NOT post any data for Tuesday and Wednesday. This morning
the THU.ZIP file was available so you should have seen data at the QRZ
and WM7D sites. I sure hope they post Friday's assignments in the
FRI.ZIP file and that it is available Saturday morning. (The FCC
usualy posts their assignments around 4:00 a.m. eastern standard
time.) I use the following URL to access the FCC FTP site:

ftp://www.fcc.gov/pub/XFS_AlphaTest/amateur/

One of the South Florida DX Association members is using AOL and he
has problems accessing the FCC FTP site and he read back the URL he is
using and it is the same one that I am using. It APPEARS that AOL is
having a problem. But I may be wrong about that.

WIA (NSW Division), PO Box 1066, Parramatta, NSW 2124, Australia
Email: wiansw@sydney.dialix.oz.au
Web: http://marconi.mpce.mq.edu.au/wia/

REPORT FROM THE DIVISIONAL SECRETARY

Peter, our President, has been away on business this week and has, therefore, been unable to prepare his usual report, so he has asked me to fill the gap.

Our AGM on the 19th April is approaching and those of you who are Members of the Division will shortly be receiving a fairly bulky envelope. This will contain a copy of the Annual Report, Financial Report, Resumes of candidates standing for election, a survey form and a copy of the proposed Memorandum of Association. For those entitled to vote, the envelope will also contain a ballot paper, Motions on Notice, Proxy form and reply-paid envelope. Also included with the ballot paper will be an envelope marked "BALLOT PAPER" - place your completed ballot form (Remember you must mark nine candidates - no more and no less, otherwise your vote will be invalid) in this small envelope. DO NOT WRITE ANYTHING ON THIS ENVELOPE, OR INCLUDE ANYTHING OTHER THAN THE BALLOT PAPER INSIDE IT.

Place the small envelope inside the reply-paid envelope - you may also include your proxy form - and write your name, callsign etc. on the reverse in the space provided. The name and callsign on the back is most important. When the locked bag is emptied prior to counting, all envelopes are first checked against the Membership List to ensure validity, and this is done before the envelopes are opened. Any received without the name and calisign will therefore be declared invalid and discarded. This means that your vote will not be included, nor will any proxy which has been given.

A word on proxy votes - please ensure that the Proxy is given to a Financial Ordinary Member of the Division and where possible I suggest you direct the proxy how you wish to vote on the Motions to be recorded, Remember - this is Your Institute, and your vote is important.

As you will read in the Annual Report, a lot has happened during the past year. We have, once again, a paid employee staffing the office Monday to Friday. The Parramatta premises have been cleaned and refurbished with much-needed repairs carried out. New equipment has been purchased where required and the bookshop has been expanded and now contains in excess of 100 titles, mainly from UK and USA.

What of the future? As far as the Division is concerned, the Policy and Strategy Committee has been working on forward planning for quite some

time - Peter has mentioned this at some length previously - and this will carry on. The Olympic Games are not too far away and it is intended to appoint a Councillor as Olympic Games Co-ordinator (a new portfolio) with power to form a small sub-committee to co-ordinate the Olympic activities. This will include Stephen Pall VK2PS, the VK2 Special Projects Officer, who, I know, is "champing at the bit" to start to plan the various activities. It
is highly likely that a member of SMA Sydney management will also be invited.

At Federal level the on-going fees problem with VK4 must be resolved, and your Council, through our delegate to Federal Council, will do everything possible to ensure that a resolution is found - otherwise we, and possibly VK3 may have to look at being the masters of our own destiny,

Finally, I am pleased to announce that Mr John K Pickett VK2BKP of Wamberal was the winner of the Membership Draw undertaken at the Wyong field day. A sincere thanks must go to Brian Kelly VK2WBK for the $50 books donation.

--Submitted by Eric Fossey VK2EFY - Divisional Secretary

AFFILIATED CLUBS NEWS

The first Wednesday evening Affiliated Clubs net took place last Wednesday evening with 9 clubs being represented thank you very much for participating.

The next Affiliated Clubs net will take place on the third Wednesday of April this being 16 April at 7.30 pm EST on 3.595 MHZ plus or minus QRM. So clubs have as many of your members involved with this net.

--Ken Westerman VK2AGW, Affiliated Clubs Officer.

TRASH AND TREASURE SALE

Because next Sunday is Easter Day, the March Trash & Treasure Sale will be held on the following - that's the 6th of April.

--Submitted by Eric Fossey VK2EFY - Divisional Secretary.

ATTENTION BROADCAST TEAM

The Broadcast Roster for the next three months will be drawn up soon, so please advise Pixie VK2KPC at the Divisional Office of any dates that you will not be available.

FEDERAL NEWS
FIRST WINNER FOR RECRUITMENT PRIZE

The first of the Fluke 12B digital multimeter prizes for new members, drawn from those who joined in the month of January this year, went to M F Ramsay VK2VZQ, of Bellambi NSW, who joined the NSW Division.

Mr Ramsay was chosen from a field of nine possible candidates, drawn by WIA Federal Secretary, Peter Naish VK2BPN, at the WIA Federal

Extraordinary Convention held over 15-16 February. Mr Ramsay won out over other new members from Queensland and Western Australia.

Each month throughout 1997, a Fluke 12B digital multimeter will be given away to a lucky winner who joined a WIA Division in the previous month. The Fluke multimeter prizes have been generously donated by Philips Test & Measurement.

Full details of the membership promotion are published each month in the WIA member journal, Amateur Radio, in Radio & Communications magazine, and on the VK2 Divisional Home page. You've got to be in it to win it, as they say in the classics! Contact your WIA state Division.

-- Roger Harrison VK2ZRH, Federal Media Liaison Officer

WICEN NEWS

As there are a number of important items this week, part of the usual spiel has been dropped; please listen closely, as the deadlines for some of these inclusions are almost upon us.

There are quite a few additions and changes to the WICEN calendar, so please listen carefully. One change is the Hawkesbury Emergency Expo, for which the new coordinator is Kevin VK2CKD; bodies -- preferably warm and breathing -- are required to assist at this show-case event.

We have been advised of a request for trainees for the National Registration Inquiry System (NRIS). This system consists of a database which is used by telephone operators to answer queries from the public, regarding personnel who may be involved in a major incident. This database is updated during significant events as information is obtained from disaster victim registrations at the scene of the incident. The first training course will be held on 12th April, at the Sydney Police Centre, Goulburn St, Sydney, and it will be a full day event. WICEN has been asked to supply six operators, with typing skills, for this important course; the closing date is 31st March. If you are interested, please contact the State Secretary, Frank VK2XVJ, for further details.

Following this are two Emergency Management courses, and they come highly recommended. The first course will be held at Hornsby RSL Club on 21st and 22nd April (this is not a weekend), and the second will be the weekend of the 17th and 18th May at the Terrey Hills Emergency Centre.

They are free, and refreshments are supplied. Please contact Barry VK2AAB for further details.

On 13th April is the Forster Triathlon. This is an all-day event, early morning to late evening, and about 25 operators are required for this event; food, drink, fuel and T-shirt are provided. Operators will need to bring equipment for 2m and 70cm voice, and will also need to contact Steve Pettet VK2KXQ, phone number (065) 55-3177, or PO Box 122 Forster, for further details. Following this is the Watagan Mountains Car Rally, over the weekend of 19-20th April, for which Andy VK2XRX is the contact;

around 20 people are required for this exercise.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

DX NEWS

SPRATLY ISLANDS AND EASTERN MALAYSIA - Paul K1XM and
Charlotte KQ1F , will be active from Layang Layang, Spratly Islands, until Friday; on Saturday, they move to Sipadan Island, until 4 April. For those interested in YL DXCC, look for Charlotte to be QRV possibly as 9M6TCR from Spratly Islands.

ANTARCTICA - Juan, CE9OH, is active daily on 14260 khz, from 2200 to 2400z. Nick, EM1HO, is active from Vernadsky Base on all bands. KC4AAC can also be found on 14270 khz daily from 2300 to 0100z.

TUNISIA - 3V8BB will be active on CW and SSB, from March 26 to 31, on all bands.

GUERNSEY - Bob, W7MAE, will be active from this Channel Island, using SSB and RTTY, until April 5, signing with his home call and a MU/ or GU/ prefix. Bob will check 10 meters first, then 12 and 17 meters and finally 20 meters.

GUAM - Jeff, N4UQM, is active from Guam (KH2) using RTTY on 80, 40 and 20 meters.

ROMANIA - Look out for Gloria, YO/G3VUN/P, from Bucharest and other locations from March 27 to April 8 while on a research project for handicapped children. She can be found using CW and SSB on 80, 40 and 20 meters.

CAYMAN ISLANDS- ZF2JC/ZF8 will be active from Little Cayman until Thursday, around 14260 and 21260 khz. He will operate mostly SSB, with CW on request.

BRAZIL - ZY2IB will be active from Sao Sebastiao Island in the Sao Paulo State East Group, from April 18 to 21. Operations will be on SSB and CW with activity on 80 through 10 meters. QSL via PY2AE.

--ARRL DX Bulletin 14, dated 20 March, 1997

SPACE NEWS

The Shuttle Amateur Radio Experiment (SAREX) will be active on board flight STS-83, which is scheduled for launch on 3rd April.

The SAREX Working Group has designated the following frequencies during the STS-83 mission:
FM voice downlink (worldwide): 145.55 MHz
FM voice uplink: 144.91, 144.93, 144.95, 144.97, and 144.99 MHz
FM voice uplink (Europe only): 144.70, 144.75, and 144.80 MHz

If packet is available, the FM packet downlink will be 145.55 MHz; the uplink will be 144.49 MHz. The FM packet call sign will be W5RRR-1.

The SAREX hardware will be flown in configuration B, voice-only, battery operation. The SAREX equipment aboard STS-83 includes the Motorola 2-meter FM hand-held transceiver, 15 spare batteries, the window antenna, SAREX headset assembly, personal recorder and the required interconnecting cables. Since STS-83 is an extended duration flight with power-hungry primary experiments, the power allocated for SAREX is 0 W [hence battery operation].

The SAREX team is also flying the Heathkit packet radio TNC for possible use later in the flight. If power conservation measures are successful, the mission control team will advise SAREX and the astronauts to initiate use of the packet radio system, which also includes one of the Shuttle Laptop computers.

-- The ARRL Letter, Vol 16, No 11, dated 15th March

AMATEUR RADIO AT THE MOVIES

Some ham radio paraphernalia supplied by the ARRL will appear in the upcoming Warner Brothers' film, Contact, based on the novel by well-known astronomer the late Carl Sagan.

The League loaned the moviemakers vintage QSTs and other publications and maps for use in the production. Mike Gastaldo of WB's props department said the radio shack scenes "happen in the first 15 minutes of the film. You can tell people to go for the ham radio scenes and stay for the astrophysics."

Gastaldo expressed thanks to the League for "helping us to portray Amateur Radio in as realistic and positive a way as possible." The movie is scheduled to open in the United States July 11.

-- The ARRL Letter, Vol 16, No 11, dated 15th March

CLUB NEWS

CHIFLEY AMATURE RADIO CLUB

The club is open every Saturday at 1:30 PM.

The address is, The Good Shepherd Church Hall, at Hyatts Road Plumpton.

Members, guests, visitors are all welcome.

You can call on the club repeater on 147.075 if you cannot find us.

The club holds a 2 meter net on the club repeater at 8:00 every Friday night all checkins are welcome.

The Club conducts classes, to obtain an amateur licence, on Monday night at 7:00. For info ring (02) 9837 2226 or (02) 9834 1186.

Coming events, 26th April. Lecture on home brewing by Richard VK2ARS.

--The Publicity officer Michael VK2EK

ORANGE AND DISTRICT AMATEUR RADIO CLUB

THE ORANGE CLUB HAS SENT OUT LETTERS OF THANKS TO ALL 34 COMMUNICATIONS STAFF WHO TOOK PART IN LAST SUNDAY'S VERY SUCCESSFUL "WYANGALA 1997" EXERCISE AT LAKE WYANGALA TO WOODSTOCK IN THE COWRA SHIRE. THE EVENT'S ORGANISERS ARE FULL OF PRAISE FOR OUR TOP-CLASS JOB OF PLANNING AND CARRYING OUT THE ESSENTIAL COMMUNICATIONS FOR THEIR LONG-COURSE TRIATHLON.

OPERATORS RESPONDED TO OUR INVITATIONS FROM PLACES AS FAR AFIELD AS CANBERRA AND WAHROONGA, MAROUBRA AND PARKES, CAMPBELLTOWN AND FORBES, BLUE MOUNTAINS AND YOUNG, AS WELL AS OBERON, COWRA, BATHURST AND ORANGE. WE WERE EVEN BLESSED WITH SOME MEMBERS OF THE WICEN NSW COMMITTEE --- AND EVERYONE DID AN EXCELLENT JOB.

JUST AS SIGNIFICANTLY THEY ALL SEEMED TO HAVE A GOOD TIME, THE SEVERAL XYLs WITH IMPORTANT DUTIES INCLUDED!

SO, NEXT TIME YOU HEAR THAT THE ORANGE CLUB IS LOOKING FOR HELPERS, GIVE IT A GO. LIKE SO MANY OTHERS, YOU'LL BE GLAD YOU DID! THANKS AGAIN, FROM EVENT COORDINATORS ADAM VK2XRA AND PETER VK2ETK OF THE ORANGE AND DISTRICT AMATEUR RADIO CLUB INCORPORATED.

--Peter Carter VK2ETK, Club Acting Secretary.

VHF DX GROUP

THE VHF DX GROUP IS AN INFORMAL ASSOCIATION OF ACTIVE VHF AND UHF OPERATORS. THE GROUP WAS FORMED TO PROMOTE NON-REPEATER ACTIVITY AND TO HELP JUSTIFY OUR GENEROUS ALLOCATIONS IN THE VHF SPECTRUM AND ABOVE.

AT THE LAST MEETING OF THE GROUP ON TUESDAY, GORDON MCDONALD VK2ZAB FOLLOWED UP HIS WYONG LECTURE ON AIRCRAFT ENHANCEMENT PROPAGATION WITH SOME INTERESTING ALGEBRA WHICH FINALLY PUT TO BED THE VARIOUS HOT AIR THEORIES ABOUT AIRCRAFT REFLECTION THAT HAVE CIRCULATED IN THE PAST.

AFTER SOME DISCUSSION THE GROUP HAS DECIDED TO MOVE ITS SUNDAY MORNING NET TO A REPEATER. THIS MAY SEEM AT ODDS WITH THE GROUP'S OBJECTS, BUT SINCE THE REASON FOR THE NET IS TO PROVIDE A POINT OF CONTACT BETWEEN FM AND NON-FM OPERATORS, THE USE OF A REPEATER WILL MAKE THE NET MUCH MORE ACCESSIBLE TO THE FM FRATERNITY.

ACCORDINGLY WE WILL SHORTLY MOVE THE NET TO A TWO METRE REPEATER, TO BE ADVISED IN A FUTURE BROADCAST. UNTIL THEN THE NET WILL; REMAIN ON 146.550 MHZ SIMPLEX.

DONT FORGET THE TUESDAY ACTIVITY NIGHTS ON 144MHZ AND OF COURSE THE GROUP'S SUNDAY MORNING NET ON 146.550 MHZ FM AT 11.00 AM,

--SUBMITTED ON BEHALF OF RICHARD SOULIE, VK2ARS

SUMMERLAND AMATEUR RADIO CLUB

1. WICEN EXERCISE

(A) SEVERAL MEMBERS OF OUR GROUP PROVIDED
COMMUNICATIONS FOR A HORSE ENDURO LAST WEEKEND, UP IN
THE HILLS, BACK OF KYOGLE. THE WEATHER WAS FINE AND MILD,
PERFECT FOR A WEEKEND IN THE BUSH. NO HORSES GOT LOST
AND ALL MESSAGES WERE HANDLED WELL. THE ONLY POINTS OF
INTEREST INVOLVED ONE OF OUR MEMBERS PITCHING HIS TENT
ON A BULL ANTS NEST, AND ANOTHER WHO, TRYING TO
DEMONSTRATE THE CAPABILITIES OF HIS NEW FOUR WHEEL
DRIVE VEHICLE, WENT DOWN A STEEP BANK AND HAD TO TRAVEL
MANU MANY KILOMETRES TO GET BACK ON TO THE MAIN ROAD!

(B) THIS WEEKEND'S DISASTER HAS BEEN CANCELLED. THE RED
CROSS DECIDED THAT THIS WAS NOT THE RIGHT TIME FOR A
DISASTER AND HAVE POSTPONED IT UNTIL LATER IN THE YEAR.
KEEP TUNED TO OUR LOCAL WICEN NET, ON TUESDAYS, FOR THE
LATEST UPDATE.

(2) INTERNET.

OUR CLUB HAS DONE IT. WE HAVE GOT DOWN TO THE DC BANDS
AND HAVE ESTABLISHED AN INTERNET SITE AT THE CLUBROOMS.
THIS ADDITIONAL FACILITY IS AVAILABLE, FOR USE BY MEMBERS,
ON THURSDAY EVENINGS, SUNDAY AFTERNOONS AND OTHER
TIMES BY ARRANGEMENT. A MODERATE CHARGE WILL BE LEVIED
TO COVER EXPENSES.

FOR MORE INFORMATION ON THIS AND OTHER CLUB FACILITIES,
CONTACT BERT, VK2HIV, 066-243239, GRAEME VK2GV, 066-851336,
OR SEND AN EMAIL TO SARC@NOR.COM.AU

--GRAEME VK2GJ, PUBLICITY OFFICER

URUNGA CONVENTION OVER EASTER.

The 49th annual Urunga Convention will be held an Easter Saturday and
Easter Sunday at Urunga on the Mid North Coast. The venue is the same
as in recent years, the hall at the rear of the shopping centre.
Most regular attendees will have received an invitation and programme in
the post a few weeks ago.

--Tim VK2ZTM

HORNSBY & DISTRICT ARC.

The formal monthly meeting takes place, on the 25th. March 1997, at 8:00
pm. Meeting place is, Mount Colah Community Centre, Pierre Close, Mount
Colah. This meeting, takes care of all business that has arisen, since our
last formal meeting.

After. the business has been taken care of, a Lecture by VK2NJC, Colin Craigen, a member of an investigation team, in the U.K. to identify, and generate interference, to the Radio Direction Finding Beams Transmitted by the Germans in 1939. These Radio Direction Finding Beams, were used to guide the German, bombers to London. Lecture is with video supplement. Remember the T.V. Series " The Secret War."

Training Classes.

The training classes are held each, Thursday evening at 7:15 pm., in a hall at the corner of Palmerston Rd. & Burdett St. opposite the Hornsby Hospital. For more information phone, The Education Officer Tony VK2BTL on 9487 3383.

The Club conducts, a net each Monday night, at 8:00pm. on VK2RNS. The frequency is 147.250 with a positive offset. Feel free to join in. All are welcome. Listeners set your scanner to 147.250.

Should you wish to know more about the Club, or its activities, please write to :- H.A.D.A.R.C. at Post Box 362, Hornsby, 2077. or contact the Publicity Officer, John on 9807 2490.

--Submitted by John W Turner VK2WRT-Publicity Officer.

THE OXLEY REGION AMATEUR RADIO CLUB WILL BE HOLDING ITS ANNUAL FIELD DAY ON THE 8TH JUNE 1997.AT THE SEA SCOUTS HALL,BULLER STREET.PORT MACQUARIE COMMENCING AT 9 AM.. THE DAY WILL CONSIST OF: FOX HUNTS, PRIZES, FOOD, TRADE DISPLAYS AND DISPOSALS. ALL ARE WELCOME.

ORANA REGION AMATEUR RADIO CLUB

The Bi-monthly meeting of the Orana Region Amateur Radio Club will be held next Thursday 27th March at 8 PM in the Scout Hall in Talbragar St Dubbo.

Mr John Moss from Telstra Dubbo will talk on Fibre Optics into the 21 century.

Hi all,

For those of you who don't get Amateur Radio magazine (the official journal of the Wireless Institute of Australia), you can now get a summary of the contents each month at:

http://marconi.mpce.mq.edu.au/wia/federal/armag.html

I'm currently restructuring the VK2 Home page, migrating material not specific to VK2 to the unoffical Federal page at

http://marconi.mpce.mq.edu.au/wia/federal/

As always, constructive comments welcome.

Here is a summary of news items covered on edition #208 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 28-Mar:
-
1. ARRL Asks FCC for Changes in the Rules Governing RACES
2. KC5HBR Makes More MIREX Contacts with Schools in Texas
3. Linenger Passes Halfway Point on MIR, Despite Oxygen Problems
4. NASA WWW Site Vandalized, Hackers Promise "Digital Terrorism"
5. Hams to Be Welcomed to NAB Convention
6. Teledesic (Gates and McCaw) Gets FCC Backing on "Sky Internet"
7. Intel Announces Debut of "Pentium II" Processor This Summer
8. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
9. Weekly Propagation Forecast
10. "The Callbook" Announces Demise of Hardcopy Editions
11. EIMAC Ends Glass Tube Line, Plant Moved to Pennsylvania
12. Henry Radio Announces Closing of LA Store, Mail Orders Continue
13. Special Event Station Calendar
14. "The RAIN Dial-up" from Chicago
15. California Firm Offers New 120 MB "A:Drive"
16. HItachi to Begin Delivery of "Slimline" 3.24 GB Hard Drives
17. "Tower Climbing Safety" - with Greg Stoddard, KF9MP
18. "This Week" Seeking Special Feature Producers/Commentators
19. Swedish "Computer Cracker" Trashes North Florida "911" Systems
-
Funding for the program's transmission and production expense was
provided this week by a grant from John Glass, NU6P, of Saratoga,
California, where "This Week in Amateur Radio" is heard Saturdays
at 6:00 PM on the NU6P repeater, on 224.80 MHz, serving Saratoga,
San Jose, Santa Clara, and Sunnyvale. Presentation of
"The RAIN Dial-up" has been made possible by a grant from
Reuben Ruen, WB0BWL, of Minneapolis, Minnesota.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EST) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
```

longitude in equatorial geosynchronous orbit. The transponder center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz. Program audio is on the 6.2 MHz analog subcarrier. On the Internet, audio is available each Sunday in 8-bit .WAV file format, sampled at 11.025 kHz, at http://www.intrlink.com/~sparky/wb4qoj/wb4qoj.htm through the courtesy of the Blue Ridge Video and Digital Society of Roanoke, VA. A separate "RealAudio" file is also available at this site. The service is carried on VHF/UHF repeaters throughout North America and on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

-

Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.NY.USA.NA via amateur packet.

6227. Repeater logic

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-22 00:00:00 UTC
From: Ian Haver <Ian@ribbox.demon.co.uk>
Message-ID: <csdm0BA+G6MzEw1V@ribbox.demon.co.uk>
Source record: 201990

Hi all.
Dont know weather im posting this to the correct address or not.
Im looking for some circuit diagrams for computer style logic for
repeaters. I built a normall logic style one which is on air at GB7TL
and working very well. However the group have decided to have an
upgrade.
As i havent got a megga amount of time on my hands i wont be able to
design a circuit. So as a cheat im asking if anyone has a logic circuit
running with a CPU rather than the old fashion ttl logic im using at
present.
Many thanks in advance.

He obviously need help. I really don't think he means to be a problem.
It just happens that way to him. I personally have talked to him and
also as you say "fought" with him. He got the last word and I just
turned my radio to a different repeater. I think if everyone would just
leave him alone and maybe be honest to him and try to urge him not to be
such a nuisance, maybe he would try to be a better operator. Some of
the acussations levelled at him, could also apply to a few others who
are'nt harrassed for the same behaviour.
In the words of Rodney King, "Can't we all just get along?"

Again, and as always, we thank you. This ends the closed circuit with Newsline report number 1022 for release on Friday, March 14th, 1997 to follow.

(*****

The following is a QST

Hams remain the key communicators in the wake of floods and tornadoes that ravage the east central United States. Also, the Little LEO's sort of loose round one, and weak signal enthusiasts are upset that spread spectrum may spread. These stories and more on an expanded Newsline report number 1022 coming your way right now.

(*****

MIDWEST WEATHER EMERGENCY

Hams continue on the front lines in the wake of severe weather in the midwestern and southeastern United States.

The flood of '97, as it is being called in Cincinnati, Ohio caught everyone by surprise. The first rains started on Friday, February the 28th and continued through Tuesday, March the 4th. And with it the Ohio River rose to a 33 year record of 64.7 feet. That is 12.7 feet above flood stage.

The hardest hit was Falmouth, Kentucky which was completely inundated by the flood waters from the Licking River, which is normally at a depth of six feet, rose to the 49 foot level.

Brian De Young, KE4HOR Emergency Coordinator for Campbell County, Kentucky was the first amateur called out.

"We assembled a team of 14 people and responded just after midnight to the north side of Falmouth, where we set up a temporary post and started getting on the air." KE4HOR

The assembled amateurs provided all the communications for the next several days.

"We did all the emergency communications for the town of Falmouth from the very beginning. When the flood waters started rising they lost all communications for police and fire dispatch, all telephone lines in and out of the area. So for the first four days of this emergency, amateur radio communications was the only form of communications in town." KE4HOR

The worst flooding in over 30 years has forced the Indiana State Emergency Management Agency to put hams on alert. Several Indianapolis hams have been assisting with communications at the state emergency operations center. Indiana officials are expecting an increased need for amateur radio communicators as the flood waters recede and people begin returning to their flood damaged homes.

Even though flood waters did not reach the Dayton, Ohio area, amateurs from that area did assist.

The Dayton Amateur Radio Association communications van is on scene in Kentucky to provide relief communications Pendleton County. Just across the river from Cincinnati. Ron Moorefield, W8ILC, District 3 ARES Emergency Coordinator details the operation.

"We got a call from the Red Cross and also FEMA to take the DARA communications van down to Pendleton County, Kentucky, right across from Cincinnati. We are manning Red Cross shelters. We are also taking care of some police departments that were wiped out. We are also quite concerned about the people that thought they could relie on cell telephones. Back down in some of those valleys cell phones don't work.

And there is one central office Ripley, Ohio was completely washout. So there is no phone service what so ever in that area. The National Guard Unit from Springfield, Ohio took a satellite system down to put in operation for a telephone network. They didn't know how to use it. So as of today, they are asking for amateurs to bridge the gap for them.

Local agencies know now that amateurs are the backbone of any communications in any disaster." W8ILC

According to Thomas, some eighty five counties in Ohio, Indiana and Kentucky are now listed as Federal Disaster Areas. The hams in those areas remain on standby alert even as this newscast goes to air.

(Via Amateur News Weekly, Newsline)

(*****

LITTLE LEO'S LOOSE ROUND ONE

Proposals by the low Earth orbiting satellite industry -- so-called "Little LEOs" -- to share spectrum with Amateur Radio at 146, 220 and 440 MHZ have hit a small snag. But its not a big enough obstacle to stop them.

The band sharing recommendations by the Little LEO industry were among those submitted last week to the FCC advisory committee that's planning for WRC 97. But the Little LEO proposals are not scheduled for inclusion in the committee's recommendations. This is because the working group involved did not agree to do so.

As previously reported, the various informal working groups that have been sorting out numerous proposals for possible consideration at World Radiocommunication Conference 97. They offered their reports March 5th to the FCC's WRC 97 Industry Advisory Committee. The report of Informal Working Group 2A, wrangled with proposals involving mobile satellite services. The version agreed on includes the Little LEO's controversial "flexible allocation" plan to share spectrum with amateurs and others. But its not in the text of the draft proposal. Rather it is buried as an annex to the report. An annex that also includes the objections raised by other participants for consideration and disposition at a higher level.

What this means is that the Little LEO industry has basically lost a part of round one. It also means that they will probably be spending lots of dollars in lobbying law makers to put them back in the running. This is because billions of dollars in long term corporate profits are hanging in the balance of this politically charged high risk investment by the supporters of the Little LEO birds. In other words, you can be 100% certain that they are NOT going to roll over, play dead and walk away.

(Via ARRL, others.)

(*****

SPREAD SPECTRUM NPRM

The FCC is proposing to liberalize the use of spread spectrum modulation techniques in Amateur Radio, but not all hams are happy with what the regulatory agency has in mind.

The matter goes back to December 1995 when the ARRL petitioned the FCC to relax its rules to give Amateur Radio more opportunities to contribute to the development of spread spectrum techniques. Specifically, the League

asked to have the FCC relax restrictions on spreading sequences. It also asked for greater flexibility in spreading modulation.

In response, the FCC now has proposed to drop rules restricting amateur stations to transmitting only frequency hopping and direct sequencing spreading techniques. As requested by the League, the FCC also has proposed to require automatic power control for spread spectrum transmitters, to ensure use of the minimum power level needed to carry out communication.

In spread spectrum the energy of the transmitted signal is distributed among several synchronized frequencies within a band and reassembled at the receiving end. This reduces power density and duration of a transmission on a particular frequency and lets spread spectrum almost invisibly share the same spectrum with users of other, narrowband modes.

And that's exactly why some hams oppose the ARRL and the digital community in their quest for increased use of spreading modulation technology. The weak signal community in particular fears that widespread use of spread spectrum will raise the ambient noise floor of the various bands. They say that even a hundredth of a decibel increase in band noise is intolerable because it will bury already weak signals in even more noise. Weak signal operators are very open in their dissatisfaction with expanding the use of spread spectrum. They are using their open remailer on the internet to orchestrate mass opposition to the proposed rule making change.

But in releasing the proposed regulatory change the said the rule amendments would increase spectrum efficiency and allow amateur operators to contribute to technological advancement. This makes it sound like a shoe in for prompt approval.

Either way, comments on WT Docket 97-12 are due May 5th, with reply comments due no later than June 5th. After that it will be a matter of wait and see.

(Via FCC, ARRL, VHF Reflector)

(*****

CB/ARREST FOLLOW-UP

An update to a story we told you about last week here on Newsline. A citizen's band radio operator arrested over interference he allegedly caused to consumer electronic devices has been found guilty.

Donnie Smith, 42, was arrested twice by police in Fultondale, Alabama. Smith's arrest comes after what police chief Bill Finn says is a complete lack of response by the FCC following more than a year of interference complaints.

On March 3rd, Smith appeared before a municipal judge and pled not guilty to two misdemeanor counts of harassing communications. But Judge Palmer Norris found Smith guilty on both counts.

Smith says he'll appeal. The case next goes to Circuit Court, but because of a nearly six month backlog of cases Smith is not expected to have his day in court until September at the earliest.

If his conviction is upheld, Donnie Smith faces up to a $500 fine and 180 days in jail. In the meantime, Smith remains free on bond. Police say he has again been the target of complaints following his second arrest and trip to jail.

Chief Finn says Smith's arrest is a direct result of the FCC's failure to act when contacted for assistance.

Donnie Smith's case is unusual. Since radio communications laws are administered by the federal government, the FCC is the agency responsible for enforcing the rules. This is believed to be only the second time local police have made an arrest in a communications case that actually falls under FCC jurisdiction. Alabama's Bill Finn says

"If the FCC won't enforce the law, he will."

(Via Newsline)

(*****

COMPUTER HACKER GUILTY

A computer hacker considered so cunning he could control almost any computer system has accepted a plea bargain for hacking his way into the secret files of two major communications companies.

Christopher Schanot, age 20, was linked to the Internet Liberation Front. Authorities identify this as a group of hackers who have claimed responsibility for some high profile computer pranks and who vilify the commercialization of the Internet.

In exchange for a reduced sentence, Schanot pleaded guilty to two counts of computer fraud and one count of illegal wiretapping.

(Via listener submission)

(*****

HAM RADIO AND MORE TO STAY ON THE AIR

The "Ham Radio and More Show" will not be going off the air on March 30, after all! According to Ron Cohen, of Phoenix, Arizona radio station KFNN, "The Ham Radio and More Show," will continue to be aired. This is because KFNN has received some encouraging responses to sponsorship of late.

Also, Darlene Grimes, a licensed ham radio operator, is now handling the shows marketing. Cohen says that he is very hopeful of more industry suppliers and organizations jumping on the bandwagon and supporting a show that really does promote amateur radio.

THE HAM RADIO OPEN TOWN MEETING

And on Saturday, May 17th, Len Winkler in cooperation with Newsline will be hosting a special live interactive forum and radio program from the 1997 Dayton Hamvention. Titled The Ham Radio Open Town Meeting, it will be broadcast live from 3 to 5 PM Eastern time via the Internet using Realaudio provided by Tucson Amateur Packet Radio.

There will be four topics for discussion in separate half hour seminars. These include the obligatory "Should CW remain a requirement for voice privileges on the high frequency bands." This will be followed by the highly controversial question of should contesting be limited to certain band segments only. Next is weather or not the Internet is good or bad for ham radio and can the two co-exist? Finally, and possibly the most emotional question will be weather the ARRL is doing all it can for Amateur Radio or does it need some viable competition?

To make this happen, Len needs some well versed and highly articulate hams willing to do battle with one another, with the live audience and the listeners at home. They will be able to submit written questions via e-mail.

Specifically, Len needs one pro and one con on each topic. They will be permitted to go one on one to express their point of view and then it will be the audience in Dayton and the listeners nationwide that will have the final say.

If you have a strong point of view on any of these topics, please contact Len Winkler, KB7LPW and offer your services. His e-mail address is simple. It's:

lenwink@goodnet.com

DAYTON WEAK SIGNAL BANQUET

And speaking of Hamvention '97. The Weak Signal Group that meets Monday nights at 02:00 UTC on 3.843 MHz. would like to announce its Annual Banquet on Friday night May 16th, at the Holiday Inn North at Waggoner Ford Road in Dayton. Price of this feast is reasonable but they are limited to 150 tickets. For more information please contact:

Tony Emanuele
7156 Kory Court
Concord Township, Ohio
44077

or

Tom Whitted
4641 Port Clinton East Road
Port Clinton, Ohio

43452

EMERGENCY CONFERENCE INVITE

You and your organization are cordially invited to participate in the Northern California Emergency Response Institute, May 17th to the 18th in Sacramento, California. This year's Institute is once again being hosted at the Sacramento Municipal Utility District's Energy and Technology Center. It is sponsored by the Governor's Office of Emergency Service's Auxiliary Communications Service and the California Emergency Services Radio Association.

Classes will include a debriefing on the recent 1997 Northern California flooding, a discussion on the many uses of technology in Emergency Services operations, using the Internet in Disaster Operations, Training the Trainer, working more efficiently with governmental agencies, and lots more.

To register send e-mail to:

larton@garlic.com

or write

NFCC EXPANDING?

Several hams say that they have access to the very private Coordinators Remailer. They have been posting on the very open VHF Reflector remailer that they are concerned that some National Frequency Coordination Council members seem to be determined to branch out from repeater coordination.

Information made public indicates that one faction of the NFCC wants the organizations scope expanded of influence expanded to cover all modes of simplex operation. Specifically APRS packet and MIR and other space activities.

NFCC reportedly has suggested that APRS move to 144.31, .33, .35 and .39 MHz. APRS users are saying no.

Also, one key member of the ham radio space community has told Newsline that their operations are international in scope and NFCC is overstepping its self appointed stature if it even considers making any recommendations dealing with ham radio space operations.

So far, no public comment from the rather self cloistered NFCC.

(Via VHF Reflector)

(*****

C3I PURCHASES RUTLAND ARRAYS

Meantime, Owen Wormser, K6LEW, the person generally credited as being one of the key players in the establishment of the NFCC has gone into the ham radio antenna business. According to a posting on the VHF Reflector, Wormser says that his company called C3I recently completed acquisition of the business assets of the former Rutland Array company and does have a limited stock of K1FO designed antennas available.

Wormser says that he has been very busy setting up the manufacturing facility to get the antennas back into production. If any of you need parts, or have had other problems with your Rutland antennas that we might be able to help with don't hesitate to ask.

Terry Price, WD8ISK, is C3I's Vice President for Antenna Operations and can be reached at:

tprice@C3IUSA.com

You can reach K6LEW at:

owormser@C3IUSA.com

NEW MUF PREDICTIONS DATABASE AVAILABLE

In DX, Maximum Usable Frequency predictions are now are available via the Internet from Solar Terrestrial Dispatch in Alberta, Canada. The predictions are based on anticipated levels of solar and geophysical activity and were computed using an ionospheric ray tracing engine to accurately determine MUFs, optimum signal takeoff angles, optimum frequencies, and other valuable information between 50 worldwide regions including the U.S., Canada, Europe, Asia, Africa, the U.K., Australia, New Zealand, Hawaii, South America and many others.

Details on how to order these predictions and the software to display the graphs can be found on the world wide web at:

http://solar.uleth.ca/solar/www/predict

If you missed that rather long URL you will find it in the printed version of Newsline at our website.

ST PATRICKS DAY CELEBRATION

This just in. Chris Maverley, EI6IA tells Newsline that on Saturday, St Patricks Day, March 15th The Cork Radio Club in Southern Ireland will be operating special event staion EI5SPD. The SPD suffix of coarse stands for St. Patricks Day and you will find club members active on 20, 40, 15, 10 and 12 meters. QSL as directed on the air.

(Via EI6IA)

(*****

HAARP QSL'S

Finally, last weeks test of the HAARP transmitting facility in Gakona Alaska are pouring in. Word is that the HAARP signal was heard all across the northern hemisphere, with the signal favoring a south-wrest path toward the islands of the Pacific.

Several listeners to Art Bell's overnight talk show Coast to Coast AM called in with signal reports. One played a recording of the HAARP signal that was very audible above the ambient band noise.

If you have a reception report for the HAARP test send it to the:

High Frequency Active Auroral Research Facility
Post Office Box 271
Gakona, Alaska 99573

Please include your copy of the CW text transmission along with signal strength observed during the constant carrier periods. A description of your antenna and receiver would be useful but is not required.

(Via HAARP, ARRL, AMSAT-BBS, others.)

The following is a QST

A bill to protect ham radio volunteers starts its way through congress once again and bandplan changes at home and overseas. These stories and more on Newsline report number 1023 coming your way right now.

(*****

HAM RADIO VOLUNTEER SERVICES BILL INTRODUCED

Help may be on the way for hams who are afraid to volunteer their services for fear of being sued. The ARRL reports that the Volunteer Services Act of 1997, known in congress as HR 1013 has been introduced by Representative Anna Eshoo of California. If enacted, the bill would place volunteers in the Volunteer Examination Program and the Amateur Auxiliary under the protections of the Federal Tort Claims Act. This, by affording them the same legal protections as employees of the Federal Government while they're carrying out such volunteer duties.

HR 1013 is nearly identical to a bill introduced last year but not enacted and similar to a unanimously accepted amendment to the FCC reauthorization bill that Eshoo herself offered last year in the Commerce Committee.

(Via ARRL)

(*****

SEVERE WEATHER IN ARKANSAS

And speaking of ham radio volunteers, Arkansas "Severe Weather Awareness Week" opened a bang as tornadoes ripped through several areas of Arkansas on March 1st.

According to Kevin Watkins, KB5SEJ, hams from RESPOND, that's the Radio Amateur Service Prepared On Natural Disasters, were in the Craighead County Emergency Operations Center when the first reports of a tornado in Jackson County came in. Watkins who serves as the Northeast Arkansas Red Cross Disaster Chairman and Henry Mitchell, N5SEB, immediately left for the affected area. There they begin a survey of damage for the Red Cross.

Meantime, back at the E.O.C., severe weather spotters and radio operators were closely watching the Jackson County storm as it skirted Craighead County damaging several homes in the western part of the county.

In the Northeast Arkansas over 500 homes were effected by a tornado and flooding. Nearly 150 were destroyed. Red Cross Damage Assessment was provided by nearly a dozen RESPOND volunteers. Other RESPOND members using the club's mobile communications van, established communications at the Chapter office to provide communications with five incoming red cross Emergency Response Vehicles.

Club members staffed the Red Cross office daily to assist Red Cross officials with communications and tactical operations until the emergency ended.

(Via Arkansas RESPOND)

(*****

MIDWEST STORM FOLLOW-UP

Meantime, ham radio operations in Ohio, Indiana and Tennessee are starting to wind down following severe weather that hit this area. As reported last week, hams throughout the three states provided much of the communications during and after the emergency.

Floods, tornados and severe weather have been on the minds of central Indiana hams this past few weeks. Record flooding in southern Indiana has kept many hams busy providing communications to flood stricken areas.

As we enter the 1997 Tornado Season, many Johnson County amateur radio operators, and local volunteer fire fighters honed their severe weather spotting skills by attending a National Weather Service Skywarn spotting class. The annual program was sponsored by the Mid State Amateur Radio Club of Franklin, Indiana.

This past week, dozens of hams participated in the annual tornado awareness drill. ARES Nets were activated across the state with reports flowing into the National Weather Service Office in Indianapolis.

And this past week tornados and donuts were the topic of discussion at the monthly Mid State Amateur Radio meeting in Franklin.

Mike Rosemark, KA9VMR, a meteorologist with the National Weather Service in Indianapolis talked about severe weather and reviewed data and pictures of the tornado that ripped across northern Johnson and southern Marion County last spring.

Hams from across the region pitched in to provide communications during this emergency.

(Via Amateur News Weekly)

(*****

CONGRESS TO FCC: TAKE TV FOR EMERGENCY RADIO

Late word that 46 members of the U.S. House of Representatives have asked the FCC to reallocate four television channels to emergency service operations. The request comes in a letter to commission Chairman Reed Hundt, on Wednesday, March 12th. In it, the lawmakers say that they want to see increased spectrum for police, fire, crisis management and rescue operations.

The request is bi-partisan. It comes from 24 Republicans and 22 Democrats who want the FCC to reallocate four current UHF television channels between 60 and 69 for exclusive use by public safety officials.

The broadcasting industry has routinely opposed similar offers. Most recently broadcasters said no to proposals made by President Bill Clinton and by Senate Commerce Committee chairman John McCain, of Arizona for a similar service.

But Representative Curt Weldon, of Pennsylvania says the new spectrum is badly needed. Weldon is a former volunteer firefighter and is currently co-chairman of the Congressional Fire Services Caucus. He says that allocating additional frequencies would reduce congestion and help agencies better communicate with one another.

So the big question, Will the commission act on this congressional mandate? As we go to air, Chairman Hundt has not yet publicly responded to this reallocation request.

(Via Congressional Watch)

(*****

HAM JAMMING CALLED "TERRORISM" BY AUTHORITIES

Indiana State Emergency service officials have dubbed a recent spate of jamming of ham radio Skywarn communications as an act of terrorism. They have asked authorities in the city of Elkhart to try to find the person or people who have been jamming emergency ham radio signals across the county.

According to an article in the March 16th issue of the Indianapolis Star, the Elkhart County Emergency Management Office has contacted the sheriff's department and reported someone has been planting devices designed to interfere with the signals of ham radio operators. Operators that the county relies on to provide storm spotting and other activities.

The problems began in February. Emergency services operators fear that with the tornado season approaching, that the jamming could blocked important transmissions when a radio operator is trying to warn local emergency services of dangerous weather. The why the State Emergency Management Agency says it considers jamming to be an act of terrorism.

The Elkhart County Sheriff's Department has opened an investigation into the jamming. No arrests have been made, and police would not comment on possible suspects. Agency officials said they will assist any way they can in the local investigation.

So far, no reports that the FCC has been contacted.

(Via KF9ZA, Indianapolis Star)

(*****

FCC DATE OF BIRTH

In regulatory news, a few weeks ago the FCC implemented an order that removed the date of birth information from the public records of all Amateur Radio licenses. The FCC did not say why it took this action. Now sources in Washington are saying that it was actually the result of complaints to the agency based on the Privacy Act.

Word is that the FCC received a number of protests from amateurs who did not want their birth date made public. Rather than face the possibility of litigation, the commission buckled under and removed the date of birth information.

Now word comes that the FCC is receiving other demands from amateurs who want most if not all information about them deleted from the public record. Weather or not the Commission will accede to these demands and how they might do it is unknown.

(Via Newsline)

(*****

1x1 CALL SIGNS PUT ON HOLD

The FCC says that it will not be authorizing any more 1x1 Amateur Radio callsigns under Special Temporary Authority any time soon. This, according to David Horowitz who is the acting chief of the FCC's Private Wireless Division.

Horowitz who is an attorney says that the FCC should not have issued any STA's for 1 by 1 callsigns while a rulemaking proceeding regarding formal rules for these call signs is ongoing.

FCC Docket WT 95-57 concerns itself with 1 by 1 callsigns. Its has been under review but action on it might not take place for several months.

(Via FCC, ARRL)

(*****

ARRL PETITIONS RACES RULES CHANGE

Meantime, the American Radio Relay League has filed a petition to the FCC to change the RACES rules in accordance with recommendations of the Leagues' Volunteer Resources Committee. At last Octobers' meeting the Board authorized the filing of such petition. It was delivered to the FCC on Wednesday March the 12th. No rule making designator or commentary cutoff date has yet been assigned.

UK GOES 12.5 KHz. 2 METER REPEATER SPACING

Hams in the United Kingdom are about to face the challenge of retooling their personal stations and their repeaters for a new bandplan. One that spaces two meter repeaters only 12.5 kilohertz apart.

As a result of a decision made by the International Amateur Radio Union at its meeting in Tel Aviv, 12.5 kilohertz spacing between repeaters has been selected as the new standard for Region One to replace the existing 25 Kilohertz bandplan.

The IARU had planed to phase it in over the next several years, but the United Kingdom is not waiting. Two weeks ago, the Radio Society of Great Britain announced that it was going to take the point position in the implementation of this new standard. RSGB announced that it would immediately begin coordinating the 12.5 khz channels. It also announced that it would require all existing repeaters to conform to new technical standards that 12.5 kHz requires.

In another bulletin issued on Sunday, March 16th, RSGB announced that the East Sussex 2 meter repeater, GB3ES, is being converted to 12.5kHz operation right now. This, while the repeater is off the air for maintenance.

GB3ES will return to service on Saturday, March 22nd. At that time the United Kingdom's ham radio community will begin to know if their current ham stations can live with the tight new standard.

(Via GB2RS)

(*****

UK 10 GHZ LOSS

It is now only just a few days before United Kingdom hams must cease operations in part of the 10 Gigahertz band. As of April 1st, the subband 10.150 to 10.3GHz will no longer be available to radio amateurs in the U.K. After that date, all activity will then take place in the two bands from 10.0 to 10.150 GHz and 10.3 to 10.5 GHz. A new RSGB approved bandplan is already in place for the affected spectrum.

(Via GB2RS)

(*****

LOUISIANA MAY GO 20 KHZ

And the United Kingdom is not the only place that changes are taking place on 2 meters. Here in the United States, word has reached Newsline that the state of Louisiana is considering switching from its current upright 15 KHZ separation bandplan over to the Pacific Northwest 20 Kilohertz plan. This, to put it in line with other nearby states.

At the March 8th meeting of the Louisiana Council of Amateur Radio Clubs in Lafayette, a motion was made to have the frequency coordination committee look into changing the current spacing of the 146-148 MHz band from 15 to 20 KHz. For some time, a number of repeater trustees and operators have been voicing their opinion on this matter and it is finally being looked into seriously.

If enacted, this would bring Louisiana into alignment with Texas, its large neighbor to the west. Texas switched to 20 KHz intersystem spacing in the upper 2 meter repeater subband 12 years ago. Other areas of the southeast and central U.S. that have moved to 20 KHz.

The Louisiana Council of Amateur Radio Clubs also voted to proceed with changes in the states UHF bandplan. These modifications add new channels for high speed packet and other digital modes. They also open up space for the so called backyard low power local repeaters and crossband repeater systems. This plan is very similar to those passed by Texas some years ago and more recently by the SouthEastern Repeater Association.

AEA INKS DEALS TO SELL PRODUCT LINES

On the ham radio business front, word that the Advanced Electronic Applications name will live on even though the company is out of business. This is because company founder Mike Lamb, N7ML, has made good on his promise not to let the AEA name die.

Word is that Lamb has inked two deals that will keep most of the AEA developed products in the marketplace. N7ML, says AEA's line of antennas, antenna analyzers and cable testing equipment was sold to Tempo Research of Vista, California. Tempo will continue the AEA name under a separate division and plans to produce the products in the antenna, antenna analyzer and cable testing line that AEA had been producing before it ceased operation late last year. And current owners of these AEA products will not be left out in the cold. This is because Tempo will also handle all technical support, warranty and after warranty service for these AEA products. Lamb also says he will assume a primary marketing position with the new AEA division of Tempo.

Meantime, Timewave Technology of St Paul, Minnesota is buying the rights to all other AEA products, including its digital line. Timewave president Randy Gawtry, K0CBH, says a purchase agreement is in place. He says that

he is in the process of making the product line transition from AEA to Timewave and hopes to be manufacturing products soon. Timewave will have the right to use the AEA name for one year.

KENWOOD AMATEUR RADIO SELF STUDY PACKAGE AVAILABLE

Kenwood's ham radio self study program for the Technician class license, now is available at Amateur Radio dealers. Called "Make a Personal Connection, "The package includes EZ-PASS, a PC Windows based training program, as well as a study manual that supports the software with information on operating rules and regulations and electronics theory.

In addition to the study material the kit contains a "How to Get on the Air Guide as well as guide charts to Amateur Radio frequencies. The package also includes an ARRL membership application.

"Make A Personal Connection" is available for Windows 95 and DOS. Minimum system requirements are a 386DX/33 and 8 MB of RAM. For more information, check out Kenwood's Web page at:

http://www.kenwood.net

FAR OFFERS SCHOLARSHIPS FOR HAMS

The Foundation for Amateur Radio says that it will once again be awarding up to 60 scholarships to licensed radio amateurs for the 1997 to 1998 academic year. Licensed hams are eligible to compete for these awards if they plan to pursue a full time course of study beyond high school and are enrolled or have been accepted at an accredited university, college or technical school. Awards range from $500 to $2500, with preference given in some cases to those pursuing certain courses of study or to residents of specific geographical areas.

Application forms and additional information are available by letter to:

FAR Scholarships

A SLOW TRAIN TO LA

Even though the month is almost over, many hams in Southern California have yet to receive their March issue of QST magazine. The League says that the U.S. Postal Service is the one that lost the magazines.

According to a special ARRL bulletin, once the magazines had entered the U.S. Postal Service stream, they were put on the wrong train and wound up in a Houston, Texas, postal facility. Once they were located, they were reportedly sent on to the Los Angeles Bulk Mail Center. They were scheduled to arrive in Los Angeles last Friday, March 14th. From there they were slated to be dispersed to subscribers. As this newscast is prepared, we at the Newsline office have yet to see our March QST. Knowing the Los Angeles Bulk Mail Facility, we figure it may make it here before summer. Then again, maybe not.

SAREX ABOARD STS-83

Eighteen schools, including establishments in the People's Republic of China and on Okinawa will get to talk to the ham Astronauts during the next space shuttle mission scheduled for liftoff on April 3rd. Three hams will be aboard the shuttle Columbia when it blasts off from Cape Canaveral. They are Mission Commander James Halsell, KC5RNI, Payload Commander Janice Voss, KC5BTK, and Donald Thomas, KC5FVF, who is flying as a Mission Specialist.

Designated mission STS-83, the flight is scheduled to last 16 days. Columbia will carry SAREX configuration C supporting both FM voice and packet radio. The shuttles primary payload is a microgravity science laboratory.

THE TITLE: HAMS

Finally, there are all kinds of stories telling why hams are called hams. The problem is that nobody has ever proved or disproved any of them. Until now.

There are stories all over how we became known as hams. One story that recently came to my attention has to do with a college radio club back in the 1900's. Back in those days, everyone just kind of picked their own identifiers.

Three club members built their own station and identified it the their own names. That got to be a long and tedious process, so they shorted the callsign to just the first two letters of each last name. That got confused when similar sounding foreign commercial station call. So they shortened it again to just the first letters of their last names.

You guessed it. Radio station HAM was born. In 1911, Congress was considering legislation to regulate wireless, as it was known then. One of the club members chose the complex regulation bill as a project for a college thesis. The instructor was so impressed, he insisted a copy be sent to a committee member in Washington. Before it was all over, the writer of the thesis was testifying before Congress about the station, and about if how the wireless regulation bill was passed, the restrictions would shut the station down.

In the debates over the bill, the little station, HAM became a symbol for all the amateurs in the country, in their fight against the commercial interests at the time.

To quote the final lines of this story, printed in a December 1996 newsletter, "That's how it all started."

You will find the whole story in to Congressional Record. Nation wide publicity associated radio station HAM with amateurs.

From that day to this, and probably till the end of time, in radio, an amateur is a ham.

Is this really the way we became known as hams? Well its as good a story as any of the others.

What you are referring to are not phonetic alphabets at all
The International Phonetic Alphabet (IPA) is an internationally recognised system of coding all the segmental speech sounds which exists in human speech (or rather, those which have been documented).
Phonetics and phonology is the study of human speech sounds and their use in human languages.
What you are referring to (Alpha Bravo...etc.) are not phonetic alphabets
THey are ways of communicating between people and organisations and are designed to filter out some of the ambiguities caused by variations in how people pronounce letters of the alphabet - so that (e.g.) G is not known as 'jee' or 'guh' but by the word GOLF (or whatever is in use)

I don't think that you can call these alphabets truly 'phonetic'

Actually the original poster asked about a "dual bander" which the FT-50 is not. It covers two bands via one transciever thus has no simutanious dual band coverage (ie. for satellites) or cross band repeat. It one needs those features the FT-51 is a much better choice. We seem to need a new term that more accurately describes this new

class of radios. Any suggestions?

Jerry

"Bob Snyder" <Bob.Snyder@mci.com> wrote:
>Why would Icom and other manufactures sell HTs that are blocked below 440m?

Mainly because it's difficult to make a radio with consistent specifications over a bandwidth of more than 10MHz. Even multimode radios (which would be much more useful if they covered the entire 430-450MHz segment!) have never covered the whole band.

At amateur prices, they can't guarantee specifications outside the 440-450MHz (FM rigs)/430-440MHz (multimode, or outside North America) bands. They can offer receive-only coverage outside those bands without guaranteeing the specs. (note the fine print in most ads)

Transmit is somewhat more difficult. Failure to meet spec can mean spurious emissions, and can run afoul of FCC regulations. Quite simply, it's probably outright illegal for them to officially offer out-of-band transmit.

Message-ID: <333400c6.1058124@news.demon.co.uk>
Source record: 202006

the need for the cw exam is no longer
it was put there in the 1920's so that commerical stations could
communciate with hams
that reason is no longer valid
the authorites will not keep an exam that is no longer necessary
and why should they
if we dont get rid of the exam in 1999 how long will it last
will some still want hams to learn cw in 2050?
somehow i dont think so
the use of cw use will just become optional

>Yeah, well try working the internet when your out in east butt %$#^^$
>eqypt!

Internet access via satellite is already being used in rural areas of the US. In the development stage is a system which utilizes a portable dish, smaller than the current crop of "mini-dishes" for television.

> How about when your power is out

Today's notebook computers can operate several hours off of internal batteries or from an external DC power source.

>or the phones are down.

See above (satellite access)

>The internet isnt much help in emergency situations

Most newer hams could care less about emergency service. That's a thing of the past...you know, helping out, volunteering in your community, etc. In today's crumbling society, all they want to do is yak!

>plus its not near as much fun!

Your opinion. Apparently, many do not agree; there are far more Internet users today than ham radio operators.

>and there arnt many servers in 3 world countries.

Who cares? There's one on every street corner here in the US. The third-worlders can beam up via satellite. Don't worry...a few of them will still be beeping with ancient QRP rigs, so you'll have somebody to talk to.

Most rigs will go down to 430 or even 420 with the clip of a wire. also
FM is really not looked upon very well below 440...

I am looking for a repeater site for a open UHF machine which is now up and running. I will supply the equipment, but need a gud site. I am looking to cover the Essex county/ Newark, New York City area. I live in northern new jersey. Perhaps on a building in Newark? If you have any ideas, please pass them along.

I must admit, its people like you who make me look at code and want to learn it. Even though I think code has little value as a testing requirement, I have seen people have great fun with the mode.

I am still trying to learn it <NO FLAMES> and really find it getting easier. Although the "Skill" is great fun, I am just trying to convey to others that this "Skill" buys you nothing but entertainment value. Even at 13 WPM it is equivenlent to 1 Baud. Thats Slow! Not effecient Communications even at its bandwidth. But FUN!.

This technique is also popular with the lids that try to jam the Century Club net. It confounds me that one jerk would try and ruin the innocent fun of 70 or 80 hams trying to work all states. I get on that net for the practice in working weak signals and difficult situations (I almost always work mobile). This lid is actually helping me by teaching me to pick out the signal from the worst he can do. I have no way of knowing if this cretin is normally a CW op but I do know he has

a keyer and is capable of sending coherent Morse at about 15 WPM. Oops there goes another shot at the CW filter myth oh well.

>ps i am a 25 wpm professionally trained cw operator
I may not be able to copy at 20 wpm or not even 13 wpm but, according to international agreement, all amateur operators operating below 30 Mhz must be able to pass a code test. I believe in code as much as I believe in the "no-code" license. Is code needed these days? Probably not. I do believe that if you like code and want to use it go ahead. I would like to see coded novices and techs have 10m fm priviliges. I have meet many hams would would call any frequency below 50Mhz trash and have heard others who think 75m is the highest they will go. This hobby will kill itself with its inside bickering over the "code". If you like it FINE if not ALLRIGHT but it is not enough to loss the hobby over it. Ham radio is not just building rigs, setting up antennas, "field day", or any one thing. You do what you like and go as far as you want. That is what amateur radio is all about whether we are "appliance operators" or "home brewers" We are still one hobby.

How do you explain the fact that most of the HF jammers are old timers who passed 13 WPM at the FCC by solid copy. CW as a filter is a load of crap and you know it. Driving the upgrade rate down that's a great idea. We can kill the hobby thus preventing forever those who don't who lack CW skills from gaining access to the sacred bands. Tell me Mike are you a VE or do you expect others to do all the extra work to do this "improved" testing? Attitudes like your remind me of the news paper unions in New York. After a protracted strike 3 of the daily papers went out of business. The unions declared victory because after all they had not given in. They had no jobs but they "showed" management. Try thinking of all the consequences for a change.

FCC DATE OF BIRTH

In regulatory news, a few weeks ago the FCC implemented an order that removed the date of birth information from the public records of all Amateur Radio licenses. The FCC did not say why it took this action. Now sources in Washington are saying that it was actually the result of complaints to the agency based on the Privacy Act.

Word is that the FCC received a number of protests from amateurs who did not want their birth date made public. Rather than face the possibility of litigation, the commission buckled under and removed the date of birth information.

Now word comes that the FCC is receiving other demands from amateurs who want most if not all information about them deleted from the public record. Weather or not the Commission will accede to these demands and how they might do it is unknown.

I notice you ignored my own experience at getting far better range and

performance with CW than with phone. Is that because you're too
polite to call me a liar, or because you know you might get a stream
of confirmations from other operators? And you call it bizarre?

You remind me of the People like Short in Pearl Harbor in WW2.

Reality?

Captain? You? Our own heroic US army?

But of course, you twisted what I said to be whole battalions of
crossbowmen armed, I suppose, with nothing else?

Did you get that habit from Law School?

I got nauseated and dropped law in the first week.

There were, I am creditable told, several crossbows used in Vietnam, or have you heard of Vietnam?

For a reality check, sir, suppose you try to stick to what was actually said, and not try to twist it into something to win a point with.

Ciao.

Right on. Don't you people understand what's going on. Many commercial equipment manufacturers are looking for bandwidth and we are playing right into their hands (And they will get it). The more they hear this type of ham and the way they are using the bands today the closer we are getting to loosing the ham bands. REMEMBER 11 METERS!. The more we fight amongst ourselfes the closer the commercial people are to getting their bandthwidth.

I have nothing again the code-nocode debate, but, would it be possible

for amateurs to also discuss something else?
My concern, about our hobby and the conversations within it, is the technology is moving forward and we should be paying more attention to where it is going.
I see very few amateur discussing spreadspectrum or digital audio or anything else but yesterday technology.
For example, during the mid 80's there was a major arguement concerning the new packet mode. As it happened, we had put so much channel space to traditional voice repeaters that there was little room for anything else. I hope we aren't doing that to any new modes that are about to come to us.
Anyways I would love to see some discussing about spreadspectrum etc. I realise there may be other discussion groups for that type of discussing but lets not overly dispurse our subjects. I would hate to have a large chunk of our amateur population only aware of a very narrow range of technologies.

-----BEGIN PGP SIGNED MESSAGE-----

If it weren't so truly sad and such a gross perversion of
what's truly important, I'd have probably laughed at the
"Op-Ed" piece on page 90 of the April QST, entitled
"A Welcome (and Much Needed) Shot in the Arm."

The author spends 3/4 of a page extolling how absolutely
wonderous and important the "Vanity Callsign" program is
and how he hopes that "the enthusiasm of the vanity call
sign program is the beginning of a change in our hobby."
(sheesh ... it's just another example of "higher class"
licensee ego gratification and agrandizement ... of course
that's the primary purpose of the Archaic Retro Radio
Luddites ... that and maintaining Morse requirements
forever ...)

He continues, "Debate and discussion are fine - and there
are certainly issues we need to address, but the rancor of
recent years has not solved any problems. Rather, it has
exacerbated those problems. Maybe having new call signs
will let us all keep smiles on our facaes - and in our voices.
Wouldn't that be great?"

So, folks, If you'll all just apply for new callsigns and forget
about the real problems facing ham radio, things will just
magically take care of themselves ... WHAT A CROCK!

This sounds like more pro-code wishful thinking that all
dissent from the growing majority of no-code and pro-no-code
hams will just "disappear" and stop being a bother to the
olde fartz of the Archaic Retro Radio Luddites ...

And it's sickening that there can be so much fucus on something
as stupid and unimportant as vanity calls ...

My advice to the author ... don't get your hopes up ... most of us
who are debating the more important issues that you vanity guys
would prefer to ignore couldn't care less about your damned vanity
call program ... actually, if it distracts you from standing in the way
of progress, fine ... just don't expect us to get caught up in your
callsign fetish frenzy and stop pushing for meaningful change in
our license structure, licensing requirements, and technical rules.

Very few, but that's not a reason to force everyone ...

> People don't, usually, appreciate the value behind learning the morse
> code until they have used it for some time.

Most of us who did invest large amounts of time and effort learning
the code, still do not see any value ... even many who actually
profess that they regularly use and enjoy Morse, feel that forcing
it on everyone is a bad idea, given the state of ham radio and
the technical situation relative to today's *real* world.

> I haven't used the code since the mid 70's yet I praise the day I
> started learning it.

So, by God, everybody has to learn it because *you* think it was
a good thing for you?

Sounds much more like "I had to do it, so so do you!"

During the time I did use it, it served me very well.

During the time I used it, code never served me very well.
It was slow, inefficient, frustrating, and very limiting ... not
something I wanted to continue to use.

Now I know that some pro-code zealot will come along
and try to throw out a bunch of insults, saying that "I was
too lazy to learn the code right" or something, but I don't
carl ... that's all just a pile of crap. There is NO valid reason
in today's world to force everyone to learn Morse in order
to gain access to totally unrelated HF priveleges ... therefore
it's nothing more than a hazing ritual and goverment licensing
schemes should not be centered around the maintenance
of the hazing rituals prescribed by the Archaic Retro Radio
Luddites.

It would have been nice to say, WHERE this net is taking place...

Here some Six Meter Nets I know about:

Wednesdays 21:00 EST 50.135 Originating in FN12 Central New York
The Twin Tiers Six Meters Activity Net
Thursdays 20:00 EST 50.140 Originating in FN02 Western New York
The Chautauqua County Six Meter Net
Staurdays 20:00 EST 50.400 Originating in FN12 Central New York
Another Six Meter AM Net

Any other local six meter nets out there?

I have had some experience with a somewhat similar setup. I am using a dipole at about 30 ft. The orientation of the ends is north/south. About 30 ft to the East I also have powerlines, cable, telephone etc. It is my personal belief, (I can back this up with contacts), that the Power lines, etc. seem to act as reflectors; enhancing contacts made to the west, discouraging contacts to the east. I tend to do a little bit of DX contesting (tough with 100 watts and a dipole), I have worked Austrailia, South Pac, etc several times, ussually with only a few calls. Europe on the other hand is like pulling teeth.

Thats my 2 cents worth.

73 and good luck

You know, what better way to quash criticism than by making a
totally bogus assertion that those who criticize butt bandits must
themselves have leanings that way. One does not have to BE
wrong to KNOW wrong when they see it.

I once saw a speaker that had a great opening line...he said that
his voice had the peculiar effect of putting homosexuals to sleep.
In a class that would have been a real snoozer, I noticed most of
my classmates remained quite awake!

Being vehement about homos does not make one "suspect"
any more than that speaker's voice really put homos to sleep.

Many people are uncomfortable with perverts in their midst just
because they don't like to see the direction it keeps insidiously
pushing us towards. I don't want rump rangers teaching in
school, not because I necessarily hate rump rangers (I do hate
what they do--it's disgusting) but because I don't want the next
generation accepting a whole class of perverted sickos as
something resembling normal or acceptable.

Given the state of the social PC movement, we can at least
rest glad HIV does not respond to the perverted logic and
arguments of lamda and its defenders. It would appear that
it is answering a higher calling. As it should be. AIDS remains
more of a social cure than a social disease. Designed by
the creator, not by the dreaded "homophobe" trying to raise
a decent family in an indecent world...

Bob

Date: 1997-03-23 00:00:00 UTC
From: Thor Harald Johansen <thorhajo@arcticnet.no>
Message-ID: <3335A5DC.F86@arcticnet.no>
Source record: 201906

This is a WEB-page about the NorCal 40A CW-Transceiver. Will someone reply to me, and tell me if this is a good choice for a transceiver?

----------CUT----------
The revision B NorCal 40A is a third-generation 40-meter QRP transceiver kit, designed by Wayne Burdick,
N6KR. The rig covers any 40KHz portion of the CW band, with a very stable VFO operating in the 2MHz range.
The receiver is a superhet with crystal filter, AGC, and RIT. The frequency coverage can be increased up to
150kHz with one capacitor change. Since varactor tuning is used, a 10-turn potentiometer can be substituted for
the supplied 1-turn unit if better tuning resolution is desired. (If you make this modification, we suggest using the
KC1 Keyer/Frequency Counter for keeping track of your operating frequency.)

The first batch of NorCal 40A's had significantly better performance than the original NorCal 40, having more
AGC range, a more stable VFO pot, and a more sensitive receiver that would drive a speaker directly. The
Wilderness kit (revision B), besides having a painted and screened enclosure, has a number of additional
refinements. These include improved receiver image rejection, better-sounding AGC and QSK, and a bit more
power output (around 3 watts with a 14V supply).

Receive-mode current drain is VERY low--about 15mA--leading to long battery life for portable operation. The
transmitter puts out 1.8 to 3 watts, depending on supply voltage, and has full QSK.

Physically, the rig is very small (2.25"H x 4.5"W x 4.5"D), about one-half the volume of an OHR Explorer. One
double-sided, screened and plated through PC board is used. There is NO chassis wiring: all controls and
connectors and even the case parts themselves mount directly to the board, resulting in an uncluttered interior.
The custom .060 case is quite rugged, and is designed to allow the top and bottom to be removed easily for
alignment or test. Long-life plastic latches are provided on the top so no screwdriver is needed to access internal
controls.

The '40A has plenty of empty front- and rear-panel and interior space for your modifications. Wilderness Radio

encourages you to customize the '40A, and will continue to provide support, even if you put it on 80 meters or some other band! The rig comes with a professionally-written, 30+ page assembly and operating manual.

What others say about the Norcal 40A

"Most of all, however, it was the quality of the kit--board, silk-screening, and case--and the excellent manual, that really made this a great FIRST kit for me. Wayne and the NORCAL gang really deserve an enormous hand for their efforts...kit building has been something I always wanted to get my feet wet in, and this was a fine, encouraging introduction." -- Matt, KN6CR

"I continue to be amazed at the receiver...I often put a separate 40m antenna on the NorCal and on my Yaesu 990, then stick one earphone from each rig on my head. The NorCal is much, much quieter than the 990. Weak signals are far easier to copy on the NorCal. I've told friends of this phenomenon, and they just don't believe me. I think you have to hear it to believe it." -- Bruce, AA6KX

NorCal 40A compared to similar kits:

-By far the cleanest construction of any low-cost kit.

-Much lower receive-mode current drain than the OHR Explorer and most other kits.

-Rock-stable down to a battery voltage of 9.5V.

-Compared to the SWL NE40-40, you'll get much higher performance, plus all the controls and connectors, no chassis wiring, and a custom, painted/screened enclosure

-Proven highly stable in the field due to its ultra-low frequency VFO

-KC1 Keyer/Frequency counter is tailored to the '40A, providing much more functionality than Curtis 8044-based keyers

NorCal 40A Pricing

The new Wilderness NorCal 40A is $129 plus shipping ($5 U.S., $10 Canada/Mexico, $15 DX).

Does anyone know if this radio can be modified for AM aircraft transmit from 118-135? Before anyone jumps down my throat for wanting to modify a rig, I am a student pilot and dont want to spend 500 bucks on a cheesy airband rig that will only ever serve as a backup. If im ever in a jam with no electrics at night and need to turn on the lights at the airport modifying this rig would be really handy. Thanks in advance

David KG2EB

Ohio/Penn DX Bulletin No. 297

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 297
BID: $OPDX.297
March 24, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W1YY, W3UR & The Daily DX, K4MZU, N4GN, N5VWM, W5IJU & Island/DX News, W5KSI, K8CH, 4L2M, DJ7IK, DL4VBP/N0PS, G4BUE & DX News Sheet and VA3CW for the following DX information.

4L, GEORGIA (NEWS). Mamuka, 4L2M, President of The National Association Radioamateurs of Georgia (NARG), informs OPDX the following callsigns are pirated stations: 4L2DX, 4L3Q, 4L44N, 4L50K, 4L55K, 4L6HMC and 4L7F. Georgian Amateurs (all stations) using 4L prefixes (4L1, 4L4, 4L6, 4L7 and 4L0) have only 2 letters in their suffix. Extra Class Amateurs and club stations have 1 letter in the suffix with one number (ex. 4L4L, 4L5O, 4L0B). Also, Georgia has a new QSL bureau address: P.O. Box 123, Tbilisi 380 004, Republic of Georgia. DO NOT use the old address: P.O. Box 1 Tbilisi , 380002 GEORGIA.

9Q, ZAIRE. The "DX News Sheet", reports that Pierre, HB9AMO, will be active for two months as 9Q5BQ from Kinshasa. Operation will be on CW on 20 meters with a vertical, but activity on other bands will come soon. QSL to home call.

ANTARCTICA NEWS. Bob, K4MZU, reports VP8CTR, HF0POL, EM1KA, EM1U, KC4AAA, KC4USV, R1ANT, and R1ANZ still continue to be active daily on most bands. CE9OH is still active daily on 14260 kHz from 2200-2400z. The operator is Juan (and a little Spanish helps!). Nick, EM1HO, at Vernadsky Base is active on all bands. QSL via I2PJA. KC4AAC is heard daily on 14270 from 2300-0100z. Bob also reports he is QSL Manager for these stations and operations: VP8CRE 1995/1996, VP8MS 72/93, VP8MX 1972, KC4/KA7DHE 94/95, KC4/VE7MKZ 94/95, KC4AAB 1972, KC4AAC 1997 (op Craig or Greg only), KC4AAD 1996, KC4AAF 1996, KC4AAG 94/95, KC4USB 94/95/96, KC4USL/am 1997, KC4USV 1995/96 (op Greg only), KC4USX 94/95, R1A/VE0HSS 96/97, KC4/VE0HSS 1996, VE0HSS/am 96/97, and R1ANW 1996 (op Henri only).

BS7, SCARBOROUGH REEF. In a news release by Tim, N4GN, he reports: "Planning for the BS7H 1997 DXpedition to Huang Yan Dao (Scarborough Reef) is proceeding on schedule. Several team members, including Wang, BA1OK and Kan, JA1BK, met recently in Guangzhou to finalize all details regarding the ship with Captain Wang Jian-xi and his crew. Arrangements were also made for generators, fuel, food and the numerous other supplies necessary to ensure the success of the operation. The BS7H 1997 operating team has now been finalized: Wang/BA1OK (Team Leader), Gong/BA1DU, Chen/BA4RC, Wang/BD4RX, Jian/BD7JG, Zhang/BG7KW, Kan/JA1BK, Kazuo/JA1RJU, Wayne/N7NG, Jim/W6EU (ex-WA6AUE) and Bob/W6RGG. Brief "bios" on each of the operators will be added to the BS7H 1997 Home Page (http://www.iglou.com/n4gn/sr/) very soon. Recent additions to the Home Page include a map showing the location of Scarborough Reef and a sketch of the reef itself, indicating the rough position of each of the operating sites. Some interesting comments from Bob, NM7M, regarding propagation between Scarborough Reef and the eastern half of the U.S. have also been added to the Home Page. Check it out!"

EA8 & EA9, CANARY ISLANDS AND CEUTA (WPX 20-meter shootout). Pekka, OH1RY, and Martti, OH2BH, have decided to activate EA8AH (Canary Islands) and EA9AM (Ceuta) respectfully. Both stations will be running single band 20 meters in the CQWPX SSB, and you may catch them to prior the contest which is the weekend of March 29-30th. The two well known DXers want to find out "What is the WORLD'S BEST CONTESTING QTH?" Both operators will be seeking your observations about the signals from these two locations particularly at the beginning and closing of the band from your path. These reports can be submitted to either of these two operators as an exchange of immediate QSL and acknowledgement of the report. Those submitting the reports are entitled to comparison report of these two locations based on the CQ WPX data. (excerpts from a OH2BH message)

GU, GUERNSEY. Look for Bob, W7MAE, (ex K7RDH) to be active this week until April 5th, as MU/W7MAE or GU/W7MAE. Operations will be on SSB with some activity on RTTY. Look for him on 20 and 10 meters. QSL to home call.

HC8, GALAPAGOS ISLANDS. Ted, HC5K, will be active as HC8K on AMTOR, PACTOR, RTTY and SSB. He and another ham will operate on all bands 160-10 meters. Also, there will be some satellite operations. Operations are to commence on March 23rd or could be delayed a couple of days because of transportation. He will stay for about one week. QSL to: Ted, HC5K/HC8K, P.O.Box DX Cuenca, Equador (South America).

KH4, MIDWAY ISLAND. Yuu-san, JA3IG, will be active again from here from April 16-23rd. He will be using his new extra class callsign, KH4/K1NT. It was reported that negotiations were touch-and-go with the U.S. Fish and Wildlife Service since this is the nesting season for the several million albatrosses that inhabit the island this time of year. The U.S. Fish and Wildlife Service had some concerns about birds inadvertently flying into the radio antennas. The ham antennas which were left on the island from past operations are normally taken down during the nesting season, but will be put backup temporarily for this operation. The main bands for

this operation will likely be 80-15 meters. Yuu-san will be looking for Europe on 40 meters from 0430z-0630z. Yuu-san will be using a windom on 40 and 80 meters.

KP2, U.S. VIRGIN ISLANDS. Rich, KF8UN, will be /KP2 from March 26th to April 2nd. He will be an entry in the CQWW WPX SSB Contest. QSL to CBA.

NEW DXAC CHAIRMAN APPOINTED. Well known DXer Wayne Mills, N7NG, has been appointed by ARRL President Rod Stafford, KB6ZV, to chair the DXAC. Congratulations to Wayne. By the way, Wayne will be one of the operators to the next BS7 DXpedition (Read BS7).

NH7, HAWAII. Al, NH7A, will be on for the CQWW WPX SSB Contest on all bands, high power. He will be looking for Europe on 20 meters 0500-0800z. QSL cards will be shipped from the printer April 10th. QSL this operation and AH7G via N2AU.

S0, WESTERN SAHARA. "The Daily DX" reports that S0RASD will be active from March 27-31st. Operators include EA2JG, EA3CB, EA3CZM, EA3GBU, EA4TX and S01A. Other operators may include EA1DAV, EA2CNU and EA4AFA. The will be on both SSB and CW. They will participate in CQWW WPX SSB. This DXpedition is sponsored by LYNX DX Group.

T2, TUVALU. Bernhard, DL2GAC, plans to be on next weekend (March 29-30th). His callsign is currently unknown. QSL to home callsign.

TS, TUNISIA (Attention Prefix Hunters!). It has been reported that Tunisia will be celebrating its 40 years of independence during the period of April 10th to May 10th. On this occasion, a special event station will be on the air as TS40A. Delegations from various amateur radio clubs including the DARC will participate in the celebrations. Next week another special callsign (TS8A) will be assigned to 3V8BB between March 26-31st. This special callsign will be used to celebrate the 8 years of presidency of Mr. Ben Ali. Hrane, YT1AD, will be using this callsign during the WPX contest. The newly founded Association of Tunisian Radio Amateurs (ASTRA) is appling for IARU membership, and it will probably take place at the "Ham Radio 1997" fair in Friedrichshafen/Germany in June. ADDED NOTE: Guest operations from 3V8BB may only be authorized by the DARC foreign department after written applications. The DARC coordinates the dates of operation.

USI ALERT. The Ascension DX Group from Gonzales, LA., will be on Grand Isle, LA., from April 11-13th, operating 24 hours/day. Operators will be Wayne/N5VWM, Don/AA5AT, Joe/KA5RNH, Stew/KB5RZY, Lee/W5ZDW, Richie/W5XV and others to be announced later. Grand Isle counts for IOTA NA-168 and USI Award LA-003S. Listen for Wayne and Don to activate several NEW islands (about 6-7) for the USI Award in the same area as well. QSL via operators home call or via E-QSL. The operations will take place on all bands CW/SSB. In the weeks coming up, look for Don and Wayne to be activating more new islands from around the state of Louisiana from time to time.

V4, ST. KITTS & NEVIS. The "DXNS" report that Jim, G0IXC, will be active next month between April 9-30th, as V47XC from Hurricane Cove. Activity will be SSB on 40, 20, 15 and 10 meters with a dipole and tri-band yagi. QSL to home call.

YM, TURKEY (Attention Prefix Hunter). Thomas/DL3FDU, Felix/DL8OBC/N5BC and Patrick/DL4VBP/N0PS will be active from Izmir, March 25-31st. They will take part in the CQWW WPX SSB Contest and have the permit to use the special callsign YM3DL throughout their stay. Their host in Izmir will be Mustafa, TA3B. They plan to be active outside the contest with operations on all bands 80-10 meters including the WARC bands with a special emphasis on 30 and 40 and 80 meters (160m is still not sure). Although they are aware of the fact that only few DXers need TA as a new one they would be happy to add some bandpoints to your collection. The QSLs for YM3DL go via DL4VBP, direct or via the bureau. If you prefer to send any cards via the postal service, please use only the following address that is also listed correctly in the 1997 Flying Horse callbook as well as in the QRZ callsign database. Please remember: The fee for an airmail letter that is sent outside Europe from Germany is 3 DM; that is about 2 US green stamps.

ZD7, ST HELENA (More activity). ZD7BG was heard on 14010 kHz at 2100z. QSL via POB 157, St. Helena. John, ZD7WRG, was heard on 14205 kHz at 1920z.

Hi Darvell,

It is in front of AES on Rancho Road. Take I-15 to the spaghetti bowl (I-15 US 95 interchange) take 95 North the second exit is Rancho turn right. After about .5 miles look for AES antenna (A3S Cushcraft with a drooping reflector on the right. It is in a small shopping center behind the Chicago Hot Dog place.

No pre registration just a free for all for parking. Get there early. First light is good. It is all but over by 10:00 There are no costs no tables it is a tailgate in the truest sense on the word.

Do you know my friend N7SFI at your E&S? We work on the birds a bunch. If you need more let me know.

Which, of course, is exactly what the "higher class" ops want ...
to minimize the growth in the number of users who can enter
"their" bands and play in "their" backyards ...

However, that's exactly contrary to the future growth and
preservation of ham radio ... but that doesn't matter to the
beepers ... most of them figure it won't happen in their lifetimes.

As somone once said, "Many beepers will consider it a 'badge
of honor' to be able to make the claim that 'I'm the last ham in
my state'."

We're playing into their hands by insisting on remaining stagnated
in the 1950s in a technological sense ... hams used to lead the way,
now we're 2 decades behind the commercial folks in most respects.
And the Archaic Retro Radio Luddites are intent on keeping it that
way ... the ARRL is like Nero, fiddling while Rome burns ...

I disagree here ... we have to fight out these issues and overthrow the
stranglehold the ARRL has on ham radio licensing/regulation so that
we can get the necessary changes implemented to allow us to make
the progress necessary to assure our future survival.

Saying "boys, boys, don't argue" will only cover up the problems for a
short amount of time, then we'll lose everything.

Another "fact" from the Carl 'watch me pull a rabbit out of my hat'
Stevenson School of Fact Generation. I don't think there is evidence of this
one way or the other (when someone keys up and belches on the air, how
exactly do you know if they passed a code test at the FCC?)

>Tell me Mike
>are you a VE or do you expect others to do all the extra work to do
>this "improved" testing?

I was a W5YI/ARRL VE for two years, but turned in my papers when I was
told that passing out morse code training material and hosting a 2
meter code training net was a conflict of interest.

>the code, still do not see any value

Ah, so now the truth starts to shine its ugly head.

Carl invested "large amounts of time and effort learning the code".

Yet, Carl is a 5WPM, coded tech.

Thus, we now know why Carl never upgraded. Code doesn't come
easily to him. It requires a great deal of effort for him to
learn.

So, rather than put the effort in, Carl has remained a coded
tech for 20+ years.

Now, he wants to eliminate the code so he can "upgrade". In
other words, its that typical welfare-state mentality. Carl
wants something for nothing.

6308. Re: Chinese vs. American Tubes ?

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-23 00:00:00 UTC
From: Gary Danaher <gdanaher@flash.net>
Message-ID: <3335AD59.3C6F@flash.net>
Source record: 201921

To my knowledge, no 811A's are manufactured in the US, but it is true
that you get what you pay for. Buy Russian tubes, not Chinese. It is
possible that you could find a good set of Chinese, but more often thatn
not, they are grossly inferior and have a very short life.

Dan K Nelson wrote:

It sure is efficient. I've been on 40m CW almost every evening for 20 years;
I sure don't hear any scum at all on code.

>I'm all for eliminating testing altogether. Mail in a form to get your license
>and join in on the fun. This would give ham radio the boost it really needs.

TL, do you own an HF receiver? 160, 80, and 40m are wall-to-wall signals
every night. What did you want to boost?

I have a book called "Hughes TWT and TWTA Handbook". I
think I picked it up in the late 1970s. The type number is
not listed. The 6 in 640 indicates it works around 6GHz.
Cathode current (Ik) and voltage (Ek) imply a CW output
power of 50 watts. This is a guess from looking at the same
parameters on similar tubes. At the time Hughes had a sales
office in Arlington VA 703-525-1560. You might try them.

In article <3333881F.57CF@csranet.com>, Hal Rosser <hmrosser@csranet.com> writes:

>cw ahhh yes. We don't like to admit it,
>but its actually a scum filter. :)
>
>

If it is a scum filter, then it's at the same time too coarse a filter, and an inefficient one also. Since there are literally lots of lids, who can copy cw, what does being able to do really do to keep out lids? CW is merely a mode which some amateurs enjoy, and others (apparently most don't). My last cw test was in front of the FCC, which proves little except that it's been a while since I took an amateur exam, but I suspect that you are forgetting all of the hams for whom Dick Bash provided the exact wording for the code exams, and thus they passed. Many of those same hams can't copy their calls sent at 3 w.p.m.

If you're referring to the lack of scum on cw, you're also wrong. CW however does require the active participation of the listener just to be heard, unlike voice, which can be tuned in, and decoded easily. I however have copied lids on cw, including some, who insist on sending a CQ repeatedly on top of an ongoing QSO, or within 150 Hz. Yes, it can be ignored with filters, but it's still rude, and just as much the act of a lid as any other lid you want to name. I won't even mention the attempts by some apparent oldtimers to drive off digital users from their favorite frequencies when they have a sked coming up. -art clemons-

If this is not of interest to you, please accept my apologies for intruding on your newsgroup and ignore this. If this is a pictures newsgroup I will follow this post up with some tasty pics. I hate spammers as much as the next guy, but we're talking about some very easy money to be made !! If you are still interested (and YOU SHOULD BE)......

-!!!-PLEASE READ THIS VERY IMPORTANT NOTICE- NOW!!!
!!! MAKE MONEY-LEGAL AND EASY WITH YOUR VERY OWN MAILING LIST BUSINESS!!!
THIS IS THE FAIREST, MOST HONEST WAY I KNOW OF TO SHARE THE WEALTH!!

Hello! Would you like to make thousands of dollars,quickly, legally, with NO CATCH? Then keep reading.... Please take a few minutes to read this article, and it just may just change your life. I SWEAR I'M NOT LYING TO YOU, ANDTHIS IS NOT A SCAM! If you're interested, please, keep reading. If you're not, then, again, I apologize for wasting your time.

The following concept of making money with your computer essentially began in the US and has now spread throughout the Western World. It is perhaps unique inasmuch as there's no risk - people from all over the world are currently participating and those that follow the initial concept are earning large amounts of cash.
Read the following carefully and you too could be joining the many thousands of Internet users who are currently earning quite reasonable sums of money with a few hours work using their computers via the Internet!
****
This posting has been appearing for quite some time and has now literally got thousands of people actively involved. No doubt like me, you may have seen it before and become a little confused by the way it's been explained. However, I personally have never believed in a so called "Free lunch" and have always worked hard to support my family. But this idea is so simple involving only a modest $5.00 investment that I simply had to try it. At first, it took me quite a while to figure it out - my first impressions led me to believe that there must be some catch to it. But this isn't so, you only have to look at the various postings to realise this; the thousands of postings that are made all carry different names and addresses. So with so many people involved I became convinced that with this particular program I too could benefit. Although many of the postings have been modified the

basic principal remains the same, in my opinion the only problem has been the way the initial concept has been repeatedly changed.
With this in mind I have set out to explain what I consider to be a clearer version, in the hope there is no doubt in people's minds that it's fully understood. Because believe me, this system does work!
****
Essential Information to Assist Your Success!!

These articles have been modified over and over again, and embody over exaggerated claims of vast earnings. While this cannot be disputed it is essential in order to receive the attention of those who read it to post an article that gives out the right signals to the recipient. I believe this article does just that, it's not full of unnecessary $$$ signs, neither does it contain ridiculous claims which only puts people off. If you want to get started right away, simply amend the address section by removing the top location and place your own name and address at the bottom.
****
In general, these postings lead you to believe you can make $50,000 within a month, which I think is a little over the top.
But now after only a few day's of my initial involvement, I'm beginning to get a reasonable and realistic return with a further understanding of just how big this concept is. The money is coming in from all over the world, and sure comes in useful but what's more important is the fact I have proved this to be a totally workable and legitimate system, involving no risk and no major cash outlay.
My other concern was the legal aspect, so I checked this through and was told that providing I mail one dollar to the person I am asking to put me on their mailing list, I am in fact paying for a service. And that service consists of using the Internet to advertise a business.
So what is this business? Well this business is to do with assembling a mailing list of people who are interested in working from home using their computers to generate an income.
****
Ok...if your interested there are three basic steps: All of which are pretty simple. Think positive, after all, the people below became involved just like you!

Let me tell you how AND WHY this works .. also, MAKE SURE YOU PRINT A COPY OF THIS ARTICLE NOW, so you can get the information off it as you need it.

STEP 1:
Get 5 seperate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." (In this way you are not just sending a dollar bill to someone, you are paying for a legitimate service.) Fold a $1 bill inside each piece of paper with your name and address on it, and mail these 5 letters to the following 5 addresses:

1- SRO Services
PO Box 909
Puunene, HI 96784
USA

2- Aumakua Enterprises
PO Box 277-316
Kihei, HI 96753
USA

3- Ross McCrindle
2-28 Cambridge St. S.,
Lindsay,Ontario
K9V 3B6
Canada

4- Sean Ringle
PO Box 1
Lanesville, IN 47136
USA

5- Ron Campbell
106-1309 West 14th Avenue
Vancouver BC V6H 1R2
Canada

STEP 2:
Now take the #1 name off of the list that you see below, move the other 4 names up. (5 becomes 4, etc.) and add your own name as number 5 on the list.

STEP 3:
Change anything you wish to, but try keep this article as close to original as possible. Now, Post your amended article to at least 200 newsgroups. (there are around 19,000 groups). All you NEED is 200, but remember, the MORE YOU POST , THE MORE MONEY YOU MAKE!!!

You are now in the mailing list business, and should start seeing returns within a week or two. Of course, the more newsgroups you post to, the greater your return will be. If you wish to remain anonymous, you may use a pseudonym, but make sure address is correct.

LEGAL ???

People have thoroughly discussed whether this is really legal. You are using the Internet to advertise your business. What is that business? You are assembling a mailing list of people who are interested in home based computer and online businesses and methods of generating income at home.
REMEMBER - people send you small fee to be added to your list. It is legal. What will you do with your list of thousands of names? That's up to you.

HERE IS WHY THE SYSTEM WORKS:

The internet is growing at a tremendous rate - it doubles in size every 4 months. Think about it. You see those "Make Money Fast" posts more and more. All that growth means potentially big profits for everyone who participates.

Of every 200 posts you make, you should receive roughly 5 responses. That probably doesn't seem like much. You make $5.00 for every 200 posts with your name at #5.

Each person who sent you $1.00 now also makes 200 additional postings with your name at #4. i.e. 1000 postings. On average, 50 people will send you $1.00 with your name at #4. That's $50.00

Your 50 new agents make 200 postings each with your name at #3 or 10,000 postings. Average return 500 people=$500.00. They make 200 postings each with your name at #2=100,000 postings=5000 returns at $1.00 each=$5,000.

Finally, 5,000 people make 200 postings with your name at #1 and you get a return of $50,000 before your name drops off the list. AND THAT'S IF EVERYONE DOWN THE LINE MAKES ONLY 200 POSTINGS! Potential income in one cycle = $50,000.

REMEMBER THIS ---- thousands of people all over the world are joining the internet every day and reading these articles every day just like you are now. So can you afford $5 dollars and see if it really works??? I think so.....

Lets review why you should do this. THE ONLY COST IS $5.00, 5 STAMPS, AND 5 ENVELOPES. Anyone can afford $5.00 for such an effortless investment with such SPECTACULAR RETURNS.

There are millions of internet users, and millions of new net surfers every month. REMEMBER - read the instructions carefully, and play fairly. THAT'S the only way this will work. Get a printout so you can refer back to this article easily.

Keep a list of everyone that sends you money, keep good books, pay your taxes, and always keep an eye on the postings to make sure everyone is playing fairly. You know where your name should be.

If you're really not sure or still think this can't be for real, then don't do it. But please print this article and pass it along to someone you know who really needs the bucks, and see what happens.

REMEMBER - HONESTY IS THE BEST POLICY. WHAT IS $5.00 TO YOU? YOU DON'T NEED TO CHEAT THIS IDEA TO MAKE MONEY!!! This is the easiest way that you can make a buck. Think how excited you'll be to open up your mailbox day after day! Will it be $50.00 or $5,000.00?? Start making your plans, because it can happen to you.

DON'T PASS UP THIS ONCE IN A LIFETIME OPPORTUNITY

6333. Re: Phonetic alphabets (Alpha Bravo Charlie Delta) (final)

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-23 00:00:00 UTC

Phonetic Alphabets (Alpha Bravo etc)
March 1997

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic/radio/
spelling/telephone alphabets, and the term analogy alphabet
is also used. This collection currently includes alphabets
for the following languages:

English, French, German, Dutch, Flemish, Spanish,
Portuguese, Italian, Romansh, Danish, Norwegian,
Swedish, Finnish, Czech, Slovak, Polish, Hungarian,
Croatian, Serbo-Croat, Romanian, Turkish, Hebrew,
Russian, Swahili, Kwanyama, Ndonga, Afrikaans,
Chinese and Esperanto.

This posting supersedes the one of 12th February. There are
a number of changes.

My thanks to the many contributors, not all of whom are
acknowledged below.

This is the last time that I will be able to post this
collection. Please report any errors or new material to a
future editor.

In my capacity as the editor of this collection I have no
objection to the further electronic distribution of this
posting in full in circumstances where it is likely to be of
interest, and where a document of this length is acceptable;
in the case of Web pages I ask that care be taken, as it is
easy to mangle something. Note that there is also a brief
version of this collection.

A copy of this article on the World Wide Web can be found
at:

<http://www.columbia.edu/~fuat/cuarc/phonetic.html>

***** ENGLISH *****

The NATO phonetic alphabet:

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

[This alphabet dates from about 1955 and is approved by the
International Civil Aviation Organization, the FAA and the
the International Telecommunication Union; note that
different bodies prefer different spellings, so one also
sees: Alfa Juliett Juliette Oskar Viktor]

[The alphabet above is from the Cambridge Encyclopedia of
Language. An alphabet with Alfa X-ray can be found in The
U.S. Department of Defense Dictionary of Military Terms.
Alfa Juliett X-ray, which is the ICAO version, appears in
A Concise Dictionary Of Slang And Unconventional English
and also a Langenscheidt dictionary]

[UK police use Indigo(???) instead of India.
German army handbook 90/91: Alfa Foxtrott Juliett.
Italian version: Alfa Charly FoxTrot Giuliet Romio Wiskey.
An Indonesian phrase book: Beta Ultra Volvo Whisky X-ray.
A precursor of the present alphabet (1952?) had: Alfa Coca
Metro Nectar Siera Union Whisky Extra]

Phonetics for digits (from an amateur radio FAQ):

zero one two tree fower fife six seven eight niner

From the Cambridge Encyclopedia of Language:

zero wun too tree fower fife six seven ait niner

'Telecom B':

[Note similarity to Apples Butter Charlie]

Alfred Benjamin Charles David Edward Frederick George Harry
Isaac Jack King London Mary Nellie Oliver Peter Queen Robert
Samuel Tommy Uncle Victor William Xray Yellow Zebra

[Found also in Swedish, Dutch, Hungarian telephone
directories. An 'analogy alphabet' in a Kenyan directory
has Charlie and no Y. A Swiss directory: Andrew Charlie
Lussy Queenie Sugar. French/German vocabulary books: Andrew
Charlie Lucy Mike Nelly Sugar Xmas. English phrase books
for Spanish/Italian speakers: Charlie. A 'British English'
alphabet in a Langenscheidt dictionary: Andrew Charlie Lucy

Queenie Sugar Xmas]

[Used as an English alphabet by telephone operators in Israel]

'British A':

Amsterdam Baltimore Casablanca Denmark Edison Florida Gallipoli Havana Italia Jerusalem Kilogramme Liverpool Madagascar New_York Oslo Paris Quebec Roma Santiago Tripoli Uppsala Valencia Washington Xantippe Yokohama Zurich

[An 'international' alphabet in a Dutch telephone directory has: Danemark. A 'French' alphabet in a Hungarian directory has: Cassablanka Danemark Que'bec Upsala Zu"rich.
An 'international' alphabet in a business book for French has: Italy Kilogram Zu"rich; the corresponding book for German has: Italy Kilogram Xanthippe Zu"rich.
An 'international' alphabet in a Langenscheidt dictionary: Danemark Madagaskar Que'bec Upsala Xanthippe Zu"rich]

[West Berlin telephone directory 1965: Danemark Je'rusalem Madagaskar Que'bec Upsala Xanthippe Zu"rich.
Santa Fe (Argentina) 1955: Dinamarca Habana Jerusale'n Kilogramo Nueva_York N~andubay Upsala Wa'shington Xantipo Yokoama.
Azores 1966: Danemark Ita'lia Jerusale'm New-York Que'bec Upsala Yokoham]

[Used as a French alphabet by telephone operators in Israel]

Bombay telephone directory 1962 (also a later source):

Army Brother Cinema Doctor English Father Gold Hotel India Jam King Lady Mother Navy Orange Paper Queen Raja Sister Table Uncle Victory Water X-ray Yellow Zero

Kenyan and Tanzanian telephone directories 1966:

Africa Bombay Charlie Durban England Freddie George Harry India Japan Kenya London Mombasa Nairobi Orange Peter Queen Robert Sugar Tanga Uganda Victory William X-Ray Yellow Zanzibar

Johannesburg telephone directory 1965:

[Note similarity to Alfred Benjamin]

Arthur Betty Charlie David Edward Frederick George Harry Isaac Jane Kate Lucy Mary Nellie Olive Peter Queen Robert Simon Thomas Union Violet William X-Ray York Zero

Malayan telephone directory 1964:

Australia Bombay China Denmark England Fiji Ghana Hongkong
India Japan Kedah London Malacca Norway Osaka Penang
Queensland Russia Singapore Turkey Uganda Victoria Wales
X'Ray Yokohama Zanzibar

Used by police in New York City:

[Note similarity to ARRL and Western Union]

Adam Boy Charlie David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Peter Queen Robert Sam Tom
Union Victor William X-ray Young Zebra

[Variants: Eddie Larry Nancy Thomas Yankee Yellow]

Used by police in Nassau County, Long Island, New York:

Adam Boston Chicago Denver Edward Frank George Henry Ida
John King Lincoln Mary Nancy Ocean Peter Queen Robert Sam
Thomas Union Victor William X-ray Young Zebra

Used by police in San Diego, California:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Queen Robert Sam Tom Unit
Victor William Xray Yellow Zebra

Used by police in Hutchinson, Kansas:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Q.. Robert Sam Tom Union
Victor William X-ray Yankee Zebra

Alternative phonetics sometimes used unofficially in amateur
radio:

America Boston Canada Denmark England France Germany
Honolulu Japan Kilowatt London Mexico Norway Ontario/Ocean
Pacific Radio Santiago/Spain Tokyo United Victoria
Washington Yokohama Zanzibar

[Also: Amsterdam, Baltimore, Brazil, Chile, Egypt, Finland,
Geneva, Greece, Guatemala, Hawaii, Italy, Kentucky, King,
Luxembourg, Montreal, Nicaragua, Portugal, Romania, Russia,
Sweden, Texas, Uruguay, Venezuela]

The ARRL (American Radio Relay League) alphabet (1948):

[Note similarity to Western Union and Able Baker]

Adam Baker Charlie David Edward Frank George Henry Ida John
king Lewis Mary Nancy Otto Peter queen Robert Susan Thomas
union Victor William x-ray young zebra

[Nowadays the ARRL endorses the NATO/ICAO/ITU alphabet]

Pre-1954 U.S. Navy Radio Alphabet:

(Communications Handbook, 1945)

[Note similarity to Able Buy Cast]

Able Baker Charlie Dog Easy Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tare Uncle Victor
William X-ray Yoke Zebra

[formerly used by IBM engineers for hex digits and pin
positions]

"Used by Armed services of USA & GB" (ARRL Handbook, 1945)

Able Baker ... Easy ... Tare ...

Allied Services 1945:

Able Baker ... Edward ... Tape ...

From a book entitled "The Complete Morse Instructor..." (1944):

Able Baker ... Easy ... Tare ...

RAF 1943-56:

Able-Afirm ... Item/Interrogatory ... Jig/Johnny ...
Nab/Negat ... Peter/Prep ...

[In similar alphabets: affirm, cast, hypo, inter, negat,
option, over, prep]

RAF 1942-43:

Apple Beer Charlie Dog Edward Freddy George Harry In
Jug/Johnny King Love Mother Nuts Orange Peter Queen
Roger/Robert Suga Tommy Uncle Vic William X-ray Yoke/Yorker
Zebra

[cf. aircraft in Dambusters raid: A-Apple B-Baker C-Charlie
E-Easy F-Freddie G-George H-Harry J-Johnny K-King L-Leather
(officially L-London) M-Mother N-Nuts O-Orange P-Popsie
S-Sugar T-Tommy W-Willie Y-York Z-Zebra]

Western Union:

Adams Boston Chicago Denver Easy Frank George Henry Ida John
King Lincoln Mary New_York Ocean Peter Queen Roger Sugar
Thomas Union Victor William X-ray Young Zero

British Army 1927:

Ack Beer Charlie Don Edward Freddy George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc
Uncle Vic William X-ray Yorker Zebra

RAF 1924-42:

Ac Beer Charlie Don Edward Freddie George Harry Ink Johnnie King London Monkey Nuts Orange Pip Queen Robert Sugar Toc Uncle Vic William X-ray Yorker Zebra

Royal Navy 1917:

Apples Butter Charlie Duff Edward Freddy George Harry Ink Johnnie King London Monkey Nuts Orange Pudding Queenie Robert Sugar Tommy Uncle Vinegar Willie Xerxes Yellow Zebra

U.S. Army 1916:

Able Buy Cast Dock Easy Fox George Have Item Jig King Love Mike Nap Opal Pup Quack Rush Sail Tape Unit Vice Watch X-ray Yoke Zed

British forces 1904:

Ack Beer C D E F G H I J K L Emma N O Pip Q R Esses Toc U Vic W X Y Z

[The OED has a reference for Beer and Emma dated 1891]

That not what I asked. I do not talk to him at all and if he
come's on the repeaters I have access to I turn it off till he go's away.

What I asked is why is he still a Amateur Radio person? He's only
broke every rule in the part 97 and still dose. Plus I heard him break AF.
MARS rules by giving out the A.F. MARS Radio freq. on the 146.640
repeater. Now I not in A.F. MARS but in Army MARS and have told them of
this and was told he's fixing to be droped if he don't get his act right.
But if I was to do all he has done the FCC would have cut up my License
long ago. It's been going on now for over 3 years now. And Our ARRL OO
Program or the FCC don't do a thing to remove this pest from the air
waves. :(

Indeed, swishing carriers and strings of dits are depressingly common
means of attempting to jam digital transmissions. In a way, however, it
is amusing, since it is singularly ineffective, and the machines don't
get mad. They just patiently retry until the jammer gets tired and goes
away.

> Where's the magic, anymore?

Some of us have looked behind the curtain. There is no magic, never
was, just good solid engineering (and that's much better today than in
the past).

>Where's the thrill of hassling with a drifting receiver and a cranky transmitter....

Thankfully gone. We've learned how to do better.

>Where's the challenge of trying to sort out a weak cw signal from
>Portugal, beneath all the clutter of 50 other guys, all trying to butt in,
>or whatever else they're doing?

Unfortunately, too much of that still exists, due to the reluctance of
many amateurs to adopt better methods. There are plenty of worthwhile
challenges left, but rehashing things done to death years ago isn't one
of them.

>Where's the pride in having your own fist, or being able
> to recognise a buddy's... without hearing his call sign???

What is to be proud about having defective sending?

Real pride comes from having the best possible operating practices
and techniques. Real pride comes from being able to communicate
with another without causing interference to others. Real pride comes
from maintaining a smart and efficient operational capability.

> No smell of hot phenolic and wax capacitors. or the trhill of late
> nights, illuminated by the dim purple glow of my old final amps, pulsing

No roar of the rotary spark gap, no smell of horse manure. I think it is
called progress.

> Nah, I couldn't get too interested in this new stuff... there's just not
> enough romance in it for me...

If you want romance, the dime novels at the drugstore can provide it,
though be warned that they cost more than a dime today.

>being able to do really do to keep out lids?

The problem is not that CW is an inefficient lid filter, but rather that
it is improperly implemented.

Today, passing a 13WPM code test means that you can copy a fair amount of
text at 10WPM and manage to guess correctly on 7 out of 10 multiple choice
questions.

Change the code tests to 1 minute solid copy, with no multiple choice or
fill-in-the-blank 7 of 10 quiz afterwards, and your upgrade rate will drop
significantly.

: Any replies are appreciated.

: TNX es 73,

: Doug Gavilanes, N6XQY
: Garden Grove, California

I'd be more concerned with the line noise from the power lines.
(which, by the way, power engineers consider "medium voltage".
"High voltage" starts above 35kV, and is almost never run
on the same poles with distribution, telephone, cable, etc.
But that's a technical nitpick digression.) The radiated
noise from insulator contamination, corona, and the occasional
flaky connection will probably have much more of an impact on
your operation than the distortion of your antenna pattern by
the presence of the conductors. I think this problem is getting
worse as the world goes to solid-state motor drives, fluorescent
lamp ballasts, and all the rest of the fancy electronics that
controls everything that's controlled with high-speed switching

devices, so anybody doing radio in the neighborhood gets to listen to all the transients on every cycle. (As a power supply engineer, I'm part of the problem here, hi.)

A cooperative utility can help a lot with this, but your success will probably depend on how important the utility considers its customer relations. If they're not interested, it may be that the best you can do is invest in the best modern DSP to take out as much of the noise as possible.

Another possible issue: if the TV cable is leaky and picks up RF from your operation, you'll be "causing" TVI through the whole cable system. I gather cable operators mostly run on a shoestring and believe they can do no wrong, so amateurs' success with this issue is very mixed. The only way to know if you have this problem is to get on the air and see if anybody complains. This is one of those near-field issues that should be improved by going higher with your antenna, to get farther from the cable.

And last, don't forget that the distribution circuits, at whatever voltage, are no-sh*t lethal. Make sure that the tower and the antenna cannot under any circumstances get within 10 feet of the power lines. This includes storm damage and removal of the tower, as well as building.

73 and gl,
JohnW

Hi Mike,
I have one of those pocket morse code tutors and find it to be well
built and rather useful.

It has taken away the lulls in my practice, for those times when I
cannot practice on the air or at my computer.

I showed it to one of our Novice Class proctors in the Club which I
belong and he complimented the clean tone it generated.

Like anything else, if it is used and gets you where you want to be, it
is a worth while investment. It will certainly not replace the
excitement of on-air learning though.

Good Luck,

Robert Robinson, KB2PSM

The point has been proven, and that is to proofread before posting. (Although, I must admit, I'm guilty of not doing this myself. Especially at 2:00 A.M.)

Nobody mentioned the angle that AM, as a technology, is very much alive and well, and that modern AM transmitters, as applied both on medium- and high-frequency broadcasting, are marvels of high-efficiency digital signal processing. This is as contrasted to CW, which has no commercial or defense future.

How many amateur AM fans are conversant with where this technology is today? To my knowledge, virtually all modern amateur transmitters do AM as a stepchild of SSB, rather than using the best modern approaches to synthesize an AM signal.

Just stirring the pot ...

I have power lines similar to Douglas has, a couple in the double
(triple?) digit kv range and have no real noise problems with them;
actually, doorbell transformers in this subdivision have caused more
of a problem than power lines.

I agree completely with John about the issue of the distance vs.
height of the lines/tower. Make absolutely sure there is no way
for the tower or parts of the tower o fall onto/into the lines.

The biggest concern Douglas should have is the low height of the
tower/antennas relative to: (1) takeoff angle, and (2) proximity to his
own and his neighbor's tv antenna and home entertainment systems.
IMHO, higher is definitely better.

Just to stir the pot a bit ...

Nobody has mentioned that the original motivation for the code test was to ensure that the Amateur Service constituted a pool of skilled operators able to move into marine, military, and other essential services in the event of war, other national emergency, or whatever. A few years ago the requirement for a CW station on every ship was dropped because the functions were superceded by satellite-based systems. The Coast Guard no longer guards 500kHz, since distress calls come via satellite, or local VHF circuits. Thus, there's no longer a national security role for a pool of CW operators.

That said, why CW? Why ride a bike when you can drive a car? Why sail when you get there faster with a motorboat? Because it's fun to exercise a skill in a way that gets you close to the technology, and because you can still get through even if you run out of gas or the traffic is so bad that cars are bumper to bumper. I use mostly digital modes lately, but still find CW more effective in tough conditions. Should there be CW-only band segments? Yes, because one SSB signal takes out at least 10

effective CW channels. Should there be a CW requirement for all hams? My conclusion is no, because of the situation in the first paragraph.

SB DX @ WW $OPDX297.1
OPDX Special Update Bulletin No. 297.1

The Ohio/Penn Dx PacketCluster
Special Update DX Bulletin No. 297.1
BID: $OPDX297.1
March 24, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, 4L1BW, 4L5O and 4L5A for the following DX information.

4L, GEORGIA (QSL UPDATE NEWS). OPDX has learned from several Georgian Amateurs that the "National Association Radioamateurs of Georgia (NARG)" is not the only organization/QSL Bureau representing 4L amateurs in Georia. Today in Georgia there are at least 4 different organizations working with radio amateurs and associations. AL, 4L5A, President of Friendship World Wide Radioclub (FWWRC), states P.O. Box 1 Tbilisi, 380002 GEORGIA is used by FWWRC. Al recommands when working a 4L station ask the Georgian amateur what organization they belong to. He also states some 4L stations do not belong to any organization. Al was kind enough to supply the following QSL routes of some stations:

4L5A via IK3HHX
4L8A VIA OZ1HPS
4L1DX VIA OZ1HPS
4L1YY VIA SP5LME
4L1AB VIA CBA
4L9A VIA IK3HHX
4L7AA using several different addresses (ASK!).

4L1BW (Sergo) via N3CBW or CBA.
4L5O (Omar) via TA7A CBA.
NARG: P.O. Box 123, Tbilisi 380 004, Republic of Georgia.
FWWRC: P.O. Box 1 Tbilisi, 380002 Georgia.

6352. Ham Radio Computer Licensing

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-24 00:00:00 UTC
From: "Scott A. Nelson" <scottnel@iw.net>
Message-ID: <33377349.5A11@iw.net>
Source record: 201778

In the April issue of WORLD RADIO, there is a small article about a new law that is to take effect April 1, 1998. If you have a computer and use it for amateur radio use, you will have to pay a license fee of $1.00 per megabyte of storage space. This would amount to $1000.00 for a one gig hard drive and that would have to be renewed annually!!! I just saw a photocopy of the article. Does anyone else have anymore information than this? This is the first I have heard of it.

73,
Scott

> CW is a part of ham radio and should always be. I know it

that's not a good reason for a test requirement. CW was always part
of the marine radio or military radio or commercial radio at one time
or another and yet it's been supplanted by other systems.

after all, you used to have to call an operator to place a call. today
you dial direct. why not go back to the days of cord boards and "number,
please?"...after all it's part of the history of the telephone system.

I would advise to NOT use these chargers, Sam. The current capability of both units far exceed the maximum safe charging current for the NiCads in the 202's battery pack. The packs get quite warm using the standard 200 mA charger; imagine what a 1000 mA charger will do. If I have the time I usually charge my 202 with a 50 mA supply: Much kinder to the NiCads.

>who passed 13 WPM at the FCC by solid copy.

Do we know that as a fact? If I were jamming folks I'd think twice before I actually used my real callsign. But your statement only confirms the fact that anyone can pass the code test - even potential jammers and riff-raff.

>CW as a filter is a load
>of crap and you know it.

Don't be so quick to dismiss the filter idea; tune down to the band segments where code is being used and you'll hear nothing like you hear in the voice segments. We could take this observation one step further and discuss the banning of voice comms since that mode produces a temptation to violate the rules. But then we'd be punishing the 99% of our population who abide by the rules. (It's really only 1% [6,000] or less that are causing all the trouble; less than 1%, Jerry.)

>Driving the upgrade rate down that's a great
>idea. We can kill the hobby thus preventing forever those who don't who
>lack CW skills from gaining access to the sacred bands.

There are some who lack the skill to pass the written; being what appears to me to be socialist-minded, what would you do for those folks? Besides, 160, 80, and 40m are already wall-to-wall signals at night - you're prediction of "killing the hobby" due to upgrading code standards just won't happen.

>Tell me Mike
>are you a VE or do you expect others to do all the extra work to do
>this "improved" testing?

What extra work? Examining one-minute of solid copy is extra work? We're talking about checking five, thirteen, or twenty words (depending upon which element was given).

Starting a new anti-code anti-OTer thread on .misc again, Carl?
I thought you promised not to do this anymore, now knowing it
violates the r.r.a charter? It's been pointed out to you dozens
of times that .policy was created exclusively for the code debate.
Bad boy.

Jeff KH2PZ

P.S. You called the ARRL the "enemy of amateur radio", but now you're
reading QST. Good boy. Guess we've converted you.

Well Mike the jammers I was specifically refering to regularly give
their call signs and they have very old call signs. The prime mover
locally tries to jam the "Liberty Net" and I know who he is and that he
has the call he uses. Your CW filter argument is specious and calling
me a liar does not change that fact. Another indication that your
monoscopic hatred of Carl has seriously affected your reasoning powers.

I don't know who told you this but it sounds like a load of crap to me.
Actually it sounds more like a convenient excuse for someone too lazy
and egocentric to contribute to amateur radio. Someone say whose only
participation is flaming people on the internet thus giving the
appearance to outsiders that hams are a bunch of jerks. Nice work Mike.

I have a better idea. Just flunk out 50 percent of the tests at
random. This will cut upgrades in half, and will filter out lids just
as effectively as the CW test does.

You ARE trying to kill ham radio as quickly as possible, right?

I think it is a bit of over-generalization to condemn vanity call applicants as the type, "the hobby be damned, just as long as I have my call." Maybe some people feel that way, but I tend to think that most vanity call types DO have an interest in the long-term survival of the hobby and haven't allowed vanity calls to be the distraction you claim they are. Perhaps the ARRL HQ staffers got a little carried away with vanity calls because many of them took advantage of program, but I don't think it has poisoned the ARRL's attitude towards the hobby. I don't see to eye-to-eye with the ARRL on a number of issues and certainly we need to look a various things like restructuring to bring the hobby forward into the next century. Sure, the code needs to be looked at, more code, less code, or no code at all !! The amateur community needs to sit down and work these issues out. Personally, I don't think code is that big of a deal, most anyone can learn it well enough to pass any class of amateur license. The code may not be very relevant these days, but in a way the code as an "catechism" on the way towards an amateur license makes one appreciate an amateur license that much more!! I have a sneaking suspicion that had you qualified under one of the existing gates of the current vanity call program, you might have requested a specific call. But as a technician class licensee, that hasn't been open to you as of yet. As they say, "people in glass houses shouldn't throw stones." Most

of the people who criticise vanity calls are ones who aren't qualified to get one under the existing gates. Vanity calls aren't new, they've been around for years in one form or another. If extra class licensees have first dibs on these calls, what's the problem??

.....Fred

--
==========
Email: maccabeus@gatecom.com
WWW: http://www.gatecom.com/~maccabeus
Packet: kc8dqf@kb8rmx#semi.mi.usa.noam
==========
Date: Wed, 26 Feb 1997 17:11:07 -0600
From: lem@datatel.com

Greetings,

I normally don't send unsolicited e-mail, but based on all of my reading
I and still have FT-50 questions.

Would anyone with knowledge please take a few minutes and see if you can
answer any or all of my questions. (Some are elementary and some are
very technical, but any help is appreciated.)

My radio has the following serial number sequence: 6L130292 (but I've
been told this doesn't matter)

My Radio has 'freeband' mod: (de-solder blob "1", remove resistor "A"
above blob 1, pwr on with lamp/knob,press FW, pwr off, pwr on with
lamp/ptt/knob, change BAND=A* to BAND=FREE, pwr off, pwr on)

My Questions

1. Why cant I get my radio to go back into "BAND xxxxxx" anymore, it did
it one time during freeband mod? I am interested in going back to see
what the A1, A2, and A3 settings do, and if I should have
createdtemplates for each of these? I assume two of them are EURO(s)
and
one is US configuration of the radio, if so does anyone have the
template
files (.TPL) for the three of these they could send me (if my assumption
is wrong - - what are they and are there more, and can you send me
template files for all of them) ? I am also interested in getting to
the
INTERNAL SYSTEM ALIGNMENT so I can adjust the signal strength meter. I
knew I read this somewhere, but YAESU said there was no such capability,
help me???

2.
What are the various differences in the versions of the ADMS-1C
software?
(for example version 1.05 won't let you enter out of band frequencies
[200-300 and cellular] even though you have done the FREEBAND
modification, but version 1.04 will allow entry of out of band
frequencies). Would having an older version(s) of the ADMS-1C software
do
anything for me, and which versions should I get my hands on (and how
can
I find them) ?

3.
How can you get the all VFO and HOME memories programmed into the radio
from the ADMS-1C? Am I doing something wrong, are these a part of a
template file (.TPL) versus a radio file (.RDF) ?

4. Would someone be kind enough to send me the following .TPL files via
the regular mail (address below): • a standard US template [pre
modification / out of the box configuration] • either or both European
templates(EURO.TPL) with a desc of what each does do • any other
templates that do anything off-the-wall, neat, or special [send with
descriptions]

5.
Can someone tell me what each of these lines in my WIN.INI file do for
the
ADMS-1C?

[FT-50 Programmer]
AllowAnyFrequency=0
Calibrate=2909
Com=1
DataDir=C:\YAESU\FT50
TemplateFile=C:\YAESU\FT50\FREEBAND.TPL
UseTemplate=1

What happens if I start changing values of "AllowAnyFrequency", will
that
open it up so I can do the out of band frequencies via the software, and
if so what value do I use (I have tried 1 and null, neither work) ?

What does the "Calibrate" do, and what are my options for values here?

6.
Is there a users guide or some detailed instruction manual that anyone
has
written for the ADMS-1C?

7.
Is there a power on button sequence that will reset the microprocessor
without clearing memories?
Is there a power-on-button-sequence that will reset the microprocessor
AND

clear the memories?
What are all the different power-on-button-sequences and what do each of them do?

8.
Is there a mod for receive in the 25-75 MHz range ?
Will the radio receive VHF low band if I add 45.1x 2 to the desired frequency ? (ie. 52.250+90.2=142.450)

9.
Is there a mod for TX (or RX) in the 220+ MHz band ?
Is there a mod for TX in the 800/900 MHz bands ?

10.
Has YAESU printed new (revised) manuals for the FT-50 yet, I heard they were going to ?
Is there an advanced users manual yet (similar to what ALINCO did for the
DR-599/600) ?

11.
What happens when you turn off the CPU clock shift function ?
What would this be used for, scanning via some sort of computer like computer aided scanning ?

A.N.A.R.T.S. News Bulletin 951 23 March 1997

COLS COLUMN

JOSEPH HENRY'S DISCOVERIES IN BASIC ELECTRICAL KNOWLEDGE ARE
OF A PERMANENT VALUE AND APPLICATION, HIS NAME WILL ALWAYS BE
REMEMBERED FOR HIS WORK ON ELECTROMAGNETIC INDUCTION. AGAIN
HIS DISCOVERIES IN THIS FIELD CAME ABOUT BECAUSE OF HIS
EXPERIMENTS WITH POWERFUL ELECTROMAGNETS.

IN AN ACCOUNT WRITTEN IN 1832 HE SAYS HE STARTED CONSTRUCTING
A LARGE MAGNET IN AUGUST 1831, FOR EXPERIMENTAL WORK. BEFORE
HE COULD COMPLETE HIS WORK ON THIS MAGNET, DUE TO OTHER WORK,
NEWS ARRIVED FROM ENGLAND THAT FARADAY HAD DEMONSTRATED THE
RELATIONSHIP BETWEEN ELECTRICITY AND MAGNETISM. HE WROTE IN
THIS ACCOUNT 'IN THE MEANTIME IT HAS BEEN ANNOUNCED IN THE
117TH ISSUE OF THE LIBRARY OF USEFUL KNOWLEDGE, THAT THE
RESULT SO MUCH SOUGHT AFTER HAS AT LENGTH BEEN FOUND BY MR.
FARADAY OF THE ROYAL INSTITUTE.

IT STATES THAT HE HAS ESTABLISHED THE GENERAL FACT THAT WHEN A
PIECE OF METAL IS MOVED IN ANY DIRECTION, IN FRONT OF A MAGNET
POLE, ELECTRICAL CURRENTS ARE DEVELOPED IN THE METAL, WHICH
PASS IN A DIRECTION AT RIGHT ANGLES TO ITS OWN MOTION, AND
ALSO THAT THE APPLICATION OF THIS PRINCIPLE AFFORDS A COMPLETE
AND SATISFACTORY EXPLANATION OF THE PHENOMENA OF MAGNETIC
ROTATION'.

IN A SERIES OF EXPERIMENTS FARADAY HAD SHOWN TWO INSULATED COILS WOUND ON A MAGNET, ONE CONNECTED TO A GALVANOMETER AND ONE CONNECTED TO A BATTERY. AS THE CURRENT STARTED TO FLOW IN THE COIL CONNECTED TO THE BATTERY, A MOMENTARY CURRENT WOULD FLOW IN THE COIL CONNECTED TO THE GALVANOMETER. ALSO A MOMENTARY CURRENT, IN THE OPPOSITE DIRECTION, WOULD FLOW WHEN THE BATTERY WAS SWITCHED OFF.

HENRY CONTINUES 'BEFORE HAVING ANY KNOWLEDGE OF THE METHOD GIVEN IN THE ABOVE ACCOUNT, I HAD SUCCEEDED IN PRODUCING ELECTRICAL EFFECTS IN THE FOLLOWING MANNER, WHICH DIFFERS FROM THAT EMPLOYED BY MR. FARADAY AND WHICH APPEARS TO ME TO DEVELOP SOME NEW AND INTERESTING FACTS'.

SPACE HAS BEATEN US AGAIN THIS WEEK, SO WE SHALL HAVE TO WAIT UNTIL NEXT TIME TO FIND OUT HOW HENRY'S METHOD DIFFERED FROM FARADAY'S. THIS MINI SERIES ON HENRY WILL CONTINUE NEXT WEEK AND PROBABLY THE WEEK AFTER. THE WEEKS FOLLOWING WILL CONCENTRATE ON FARADAY BEFORE MOVING ON TO THE TELEGRAPHS AND WORK OF COOKE AND WHEATSTONE.

73S FOR NOW DE COL VK2CTD.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT
(14 MARCH - 20 MARCH)

ISSUED ON 21 MARCH 1997

SUMMARY
Date 14 15 16 17 18 19 20
10cm 76 76 76 75 75 74 72
A 6 7 9 6 8 4 (4 ESTIMATED)
T 10 20 20 7 14 13 11

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH, W.A. WAS QUIET OR QUIET TO UNSETTLED DURING THE PERIOD.

FREQUENCIES WERE NEAR MOSTLY NEAR PREDICTED MONTHLY VALUES WITH SHORT DEPRESSED PERIODS TO 15 PER CENT ON 14TH AND 17TH MARCH, AND ENHANCED TO 15 PER CENT OR MORE 1500 TO 2000 UT ON 18TH.

FORECAST (21 MARCH - 27 MARCH)

SOLAR: VERY LOW.

GEOMAGNETIC: INITIALLY QUIET TO UNSETTLED, GRADUAL INCREASE TO ACTIVE LEVELS EXPECTED DURING INTERVAL 25-27 MARCH.

FREQUENCIES: INITIALLY NEAR PREDICTED MONTHLY VALUES.
DEGRADED HF COMMS CONDITIONS EXPECTED AT TIMES

DURING INTERVAL 25-27 MARCH, FOR SOUTHERN
REGION (MID TO HIGH LATITUDES), NORTHERN REGION
(MID TO LOW LATITUDES) ARE NOT EXPECTED TO BE
SIGNIFICANTLY DEGRADED.

COURTESY OF IPS RADIO AND SPACE SERVICES

For next week's bulletin send your bandpass and notes of interest to Randy, WX5L at W5KSI.(hashsign)NOLA.LA.USA.NA or by e-mail to wx5l at communique.net .

73 and good hunting de Jules W2JGR at
W5KSI.(hashsign)NOLA.LA.USA.NA
e-mail: w2jgr at millcomm.com

Note from VK2CTD - some keys on a computer cannot be used with Rtty. Examples are the Hashsign, upper case figure 3, and the AT sign, upper case 2, on a standard keyboard.

When such a character occurs, Anarts convention is to spell the character in full, sometimes between bracket signs. URL addresses sometimes have a little squiggly character located left of the figure 1 on a standard keyboard. it is called a 'TILDE'. Where these 'TILDE' appear Anarts will replace with a space. If You connect to that URL address on the Internet, you will need to replace the space with the original character.

ARLD013 DX news

This week's bulletin was made possible with info provided by Tedd, KB8NW, the OPDX Bulletin, The 599Rpt, The DXNS and Contest Corral from QST. Thanks to all.

JUAN DE NOVA ISLAND, FR/J. Henry, FR5ZQ, is QRV as FR5ZQ/J, using CW and SSB. His length of stay, and QSL route, are unknown at this time.

ST. HELENS, ZD7. Ray Hudson, ZD7RH, is QRV on 20 through 10 meters with an FT 101E and wire antennas. QSL information is not as yet available.

BURKINA FASO, XT. Dan, N9XAG, currently QRV as XT2DP, will go QRT in either April or May. QSL via WB2YQH.

News about 7O1A

The following was received today from the League addressed to members of the DXAC..... de Tedd KB8NW (DX Advisory for the Great Lakes Division)

To: DXAC
Fm: K8CH & K5FUV

You may be hearing questions about the recently announced decision of the DXCC Desk regarding 7O1A documentation. We are planning to provide some additional background on the situation in Yemen in the 'How's DX' column of May QST. In the meantime, here's some background for you. Please feel free to share this with ARRL Members in your Division.

1. We have been following closely developments in Yemen for more than three years. Several groups have been working independently in efforts to obtain a ham license. Most of them have been in contact with DXCC, informing us of their progress. All of them have sought avenues for licensing in the north and the south. All of them have been there several times. All of these sources agree that administration of Amateur Radio is under the Ministry of Communications (MoC) in Sana'a.

2. During the operation of 7O1A, we received contacts from several of these people, each independently. One of them called Sana'a several times, and told authorities about the operation after it was over. Sana'a authorities requested that further information be faxed to them, as they did not know of any such operation. The authorities went on to say that at the very least, they should have been advised, and should have approved any operation.

3. (We also received a letter from well respected European who was actually in the MoC offices in Sana'a at about the time of the operation. He also requested that we 'check it out'.)

4. Bill Kennamer faxed MoC in response to their request.
Bill received the following reply:

Dear Sir,

Thank you for your fax message of FEB.07, 1997 on the issue
of the Amateur Radio License NO. 1 from our Aden office.

Please note that the applicant had previously approached us
in the Ministry of Communications-Sana'a and was advised that
it is not possible at this time to issue any license for the
Amateur Radio as the ministry is still under the preparation
stage for the releavent regulatory documents & procedures for
this activity.

Therefore the ministry of communication in the Republic of
Yemen, as the main body responsible for this activity, till
this moment had never issued an official authorization for the
RADIO AMATEUR.

We will let you know when we shall issue such licenses in due
time and to whome the first license will be granted.

Please be advised and act accordingly.

Best Regard
MINISTRY OF COMMUNICATIONS-SANA'A

address@sig "Glen Quarnstrom" writes:

> You ARE trying to kill ham radio as quickly as possible, right?

I repeatedly read postings like this claiming that unless the no-codes are allowed onto the already overcrowded hf bands, then ham radio will die. Does anyone know how and when this strange idea started?

It seems to me that if the no-codes abandon the vulnerable vhf bands, then these will be left underused and undefended. I never heard of any commercial interests wanting to grab 20m etc within the past few decades. All the commercial interest is in frequencies suitable for satellite, cellular or short-range business use, which means nothing below 200 MHz where skip might disrupt the system.

Sure, if I were a lazy no-coder I'd certainly also be asking for no-code access to the hf bands. But I hope that I'd be honest enough to admit that it was just for my own benefit, and not invent the nonsensical and illogical myth that the very survival of the hobby depended on my getting it.

Regards,

Hi,
name is Gary
I am interested in getting into digital with my HF radio.
I would like any suggestions on the type of modem that would work best
for my system, I have a FT-890 and a pentium computer.
I am interested in Amtor, CW and Packet and would like to do some VHF
packet also.
I am on a buget also.
Any help would be appreciated!

UHF Power Amplifier Modules

The MITSUBISHI M67729H2 has been developed and produced in large quantities
for UHF cellular telephone applications.

Technical Data:
Output Power = 20 W
Gain = 21 dB
Harmonics = -40 db
Spurious Outputs = -70 dB
50 Ohm in/out

This module is also excellent suited for class C Amateur Radio PA's in the 70 cm-Band.
The low output of a UHF handheld may be amplified to about 20 W output! The use of these modules is the easiest way to build a PA. There are various discriptions in the ham literature.

I am now able to offer you this excellent module with a more than 10 dB! price
reduction:

1 ea for DM 35,--
10 ea for DM 300,--

plus postage with C.O.D. charge.

6379. Trenton Hamfest...what happened to it?

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-24 00:00:00 UTC
From: nd2k@hogpb.ho.att.com
Message-ID: <5h6a5o$ffv@newsb.netnews.att.com>
Source record: 201843

I went to the Trenton (DVRA) hamfest yesterday (23Mar) and boy was I surprised...what happened to this hamfest? Granted, I haven't gone to this one for a few years but not too long ago this hamfest was a "biggie"; many tailgaters and quite a number of commerical vendors when it was held at the Armory. This year there were maybe 25-30 tailgaters and one commercial vendor (Radio Shack).

What happened???

Al Schwarz ND2K

6380. Question: Charger for the HTX202

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-24 00:00:00 UTC
From: maynards@pacbell.net
Message-ID: <33364684.2305894@news.pacbell.net>
Source record: 201844
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur,rec.radio.amateur.homebrew,rec.radio.amateur.misc

I've misplaced the wallcharger for my HTX202 battery pack. The
charger is 12vdc, 200ma. I have a couple of other wall plugs that
are:

9vdc, 1A
12vdc, 1A

As long as I have the polarity correct on these plugs, could I charge
from these and not hurt the nicads?

73,

Sam

Almost every ham busted for improper operation on HF has been at least Advanced Class. Many were Extras. If one bothers to listen to the low lifes on 20 & 80 among other places, one discovers that transmitters with the same distinct background sounds are used by people with callsigns which have advanced or extra class licenses attached to them. Some of the "idiots" have very distinct whines, or background fan noises that are unmistakable. Either someone very carefully duplicated those noises, or they're from the same transmitter. Frankly, I'ld be surprised to see a lot of techs or novices getting busted for HF violations today. Novices, because there aren't many new ones, and techs because frankly, they have little incentive to buy HF equipment except code. Let's face it, buying a piece of HF gear, even used is a rather expensive thing to do, unless the user plans on transmitting with it. It's entirely possible that a small proportion of the idiots making HF horrible are not licensed to transmit, but if you had to bet money, unless we're talking about KV4FZ, it would be wise to bet that the lid is licensed, and has passed a cw test. -art clemons-

Yeah, well, I can get on a local two-meter machine and pick up a
couple of calls from "good buddies" too, but that doesn't mean the
codeless license was an abject failure everywhere.

>Your CW filter argument is specious and calling
>me a liar does not change that fact.

Liar Jerry? No, not a liar. Simply "creating" (or perhaps 'concluding'
would be a better term) certain "facts" based upon your own personal
biases. I wouldn't have a problem if you had said "It is my opinion"
or "I think that", but instead you presented your opinion as if it
were a fact -- the Carl Stevenson "fact generation" technique.

>>I was a W5YI/ARRL VE for two years, but turned in my papers when I was

Al:
If by the Armory you mean the 112th Field Artillery out in Ewing, it
hasn't been there since the early 80's. Its's been at what used to
be called Trenton State College (now called College of NJ) for the
last few years, with a short stint at MCCC on Old Trenton Rd. When
this particular one was held last year at this time at TSC, there were
a number of commercial vendors. I didn't make the fall DVRA hamfest
last year (which was held at the same site as Sunday's), so I don't
know how many commercial vendors were there. My guess is that they
may have showed up last year, found that they were essentially going
to be outside (albeit under a roof) and said the heck with this and
decided not to return this year. It's one thing for an individual
ham with his own stuff to sell if he wants to be outside, but totally
different for a commercial vendor with thousands in inventory at a
hamfest and to be essentially at the mercy of the elements.
I agree with you that it's a shame what has happened to this hamfest.
If subsequent ones are at the same location, all I can say is that the
DVRA has seen the last of me at one of it's fests. Maybe someone from
the DVRA would care to comment?

Date: 1997-03-24 00:00:00 UTC
From: srwhite@ibm.net
Message-ID: <5h6feh$2foe$18@news-s01.ny.us.ibm.net>
Source record: 201848

I am selling my Icom IC-Z1A... It's in great shape, and
only a year old.

Features:
Alphanumeric Display
40 Memories per band
5W Output at 13.8vDC
Speaker/Mic/Display detachment cable
Antenna
Original Box and manual!
1 Year old and in MINT condition, not a scratch anywhere!

Also includes:
LC-124 Vinyl Case
CP-12L Filtered Cigarette lighter cord

I'm asking $325 for everything...
If you are interested please e-mail me, or visit
my web page at http://members.aol.com/unitedsnd2

I'm selling some pro audio and video gear as well...

Also for sale is a Radio Shack Frequency counter for $70

Thanks,

Steve White
United Sound

6385. ScoutElmer Award for you!

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-24 00:00:00 UTC

YOU DON'T NEED TO BE A SCOUT OR LEADER TO EARN THE ScoutElmer AWARD!!!
ScoutElmer Award for helping Scouts become ham ops

WHO QUALIFIES FOR THE AWARD?
1. Licensed ham op (any level)
2. Scout or Adult Leader (past or present) or...
3. Any ham that know someone (Scout or leader) currently active in a Scout unit.

WHAT IS REQUIRED FOR THE AWARD?
1. Agree to respond to Scouts via email with their questions about ham radio in your local area, for 1 month.

HOW DO I SIGN-UP FOR THE AWARD?
Email to the address below and fill in the blanks.... that's it!
1. Name & Ham Call Sign:

2. Email address:

3. Locations: (ie London, UK; Los Angeles, CA, USA; etc)

4. What do you want to do: (email only; email & phone; email, phone & ham class)

5. Your Scout affiliation & position (enter past affiliation and date if applies):
(If no current or past affiliation) Your Scout or Scout leader sponsor:

6. Optional comments for your ScoutElmer listing: (ie. ARC Club listing, Explorer post, Troop etc.)

WHAT DO I GET?
ScoutElmer Award recipients will receive special award logo graphic you can add to your website. You also get a certificate (suitable for framing).
Lastly the satisfaction that you helped promote amateur radio in Scouting.

If you've already applied for the award, sorry for the email. You should receive confirmation in the next few days.
YIS
73
Mel Goldberg KO6TF
ASM Troop 319 & Webmaster Advisor
myriad1@ix.netcom.com
http://www.ocbsa.org/troop319/ham.htm

ScoutRadio WWW is a "good turn project" of Troop 319, Huntington Beach, California USA.

There are over 250,000 (500,000 worldwide) hams who are or have been envolved in the Scouting movement, helping their communities in times of natural disasters, emergencies and humanitarian aid. We hope you or your ARC can help local Scouts get into ham radio and keep the amateur radio service strong.

Thanks for you input Christopher.

You know, I was wondering, if the code wasn't so hard
to learn, (As people say), if this would even be an
issue. It seems that if anyone could learn the code
overnight or in a week, I don't think this code issue
would even be on anyone's mind.

Would it be Power limitations, Bandwidth, New frequencies?

I haven't entered the code debate or sided either way. Hence
my post "What's the Problem". I learned the code in 31 working
days in the Marine Corps in 1976. In fact I received the
Samuel F.B. Morse Award (the only recepient of 75 class members.)
Actually, during those 31 working days, we didn't even touch
the code until after 10 days. They had to teach us to type
first! I graduated at the top of my class and was rewarded with
HFDF secondary schooling and Choice of Duty stations anywhere
in the world. From my perspective, even though I know it was
difficult, the code 'appears' to come easy to me. That's
why I haven't really argued the "Code/No-Code" issue.

But what if they required a typing test before you could buy
a computer? Perhaps 30 WPM etc. No, actually anyone knows that
they can hunt and peck out characters on the kbd and they get
better over time.

I think code gives our amateurs a common base. One where all
can comfortably rest assured that someone "out there" can
be worked. All they ask is we barely learn the code for our
novice at 5 WPM -- and with a little effort you're up to
13, 18, 22 wpm -- Really!

I also think the debate really is -- 'Why can't we just do
voice on all frequencies with Extra class priveledges?".

Maybe they should remove the code requirement, but ADD another
requirement such as proficiency in Two or Three other communic-
ations protocol. How about RTTY operation and a Teletype

typing test, reading the BAUDOT code on a tape etc... Something
that shows some dedication to the Amateur Radio Hobby, some
insurance that our hobby is still comprised of dedicated
individuals, not just 2KW Appliance operators and thier
mail-order Beam antennas.

See? I'm a coder, and I agree, "Yeah, pull the code requirement."
The real question is -- "Ask not what the hobby can do for
you, but what you can do for the hobby."

I think this is the real issue.

> This is most frustrating. The mod for the w31 requires you to remove a
>surface mounted chip about the size of this "

Handhelds are mainly only effective when used with repeaters at these
frequencies. Voice repeaters are typically only above 440Mhz
according to most accepted band plans.

The radios are easier to design to operate over a limited bandwidth,
especially considering the size of the radios they are making.

Below 440Mhz you have repeater links and control channels, packet,
amateur television, and EME/SSB work. It is best to keep the general
FM voice-only populace out of these areas.

For those in the know, there are always alternatives (and these are
almost always better than a handheld).

I would like to be the first to thank you for classifying me in the "Sure, if I were a lazy no-coder I'd certainly also be asking for no-code access to the hf bands." category. Just so you can figure it out that was sarcasm. I have very little desire to jump onto the lower 3% of the Amateur Bands, and little desire to learn a just about worthless mode of communication (13WPM=aprox 1 Baud, wow how do you do it). I do have interest in it because some of the coders look like they are have some fun with it. While all the HF guys are waiting for their "cycle" (Where have I heard that phrase before?) I will be quite content working DX via satellite.

I agree with your assessment of VHF however. It is very important bandwidth that if left unguarded could disappear quickly.

I will not lump all coders into a category. I know some impressive EE's that are coders. I also have seen and held QSO's with absolute idiots hold an Extra Class license.

I'm selling my Icom IC-P4AT 440MHz handheld.

In case you may not be familiar with this rig, I'll list
it's features...

Features:
100 Memories
5W Output at 13.8vDC
UT-50 CTCSS Encoder Board
LC-91 and LC-93 Vinyl Cases
OPC-254 Cigarette Lighter Cord with Plug
BP-111 7.2vDC 400mAh small battery
BP-113 7.2vDC 1200 mAh extended battery.
Smiley Antenna Set (1 Tall, gain and 1 'stubby duck')
RadioShack Speaker-mic
Original Box and Manual.

The rig is 2 years old, and in excellent condition.
I'm asking $200 for the whole package!

If you are interested please e-mail me, or visit
my web page at http://members.aol.com/unitedsnd2

I'm selling some pro audio and video gear as well...

Also for sale is a Radio Shack Frequency counter for $70

Thanks,

Steve White

I've not any proof or references for all this, but...

CQ is a common and very widely used shorthand for calling any station.

Often things are added to slighty vary or narrow the search or field
of expected answers. The "D" added would most likely be used to
indicate a distress call just as "DX" is added when a station is
looking for a far away station since "DX" = "distant" or "distant
station", or "FD" is added for an annual event/contest called "Field
Day" that many hams participate in.

>
>The same with SOS. Do the letters have meaning or were they just an easy
>sound configuration to remember and key quickly?

I've heard that SOS is just a pattern of dits (dots) and dahs (dashes)
that is easily remembered and sent but not easily sent accidently.
I've also heard, mostly as a child, that SOS stands for "save our
ship" or "save our souls" and such.... personally, I think it's just
a series of characters/sounds that are easily sent and received.

FM is the only way to work the Mir space station. The Icom in question is
a W31a which requires you to desolder a surface mounted chip about the size
of this double quote " .

As far as "out of band" 430 is not. Doug is right in that there may be
spurs but atleast make the guarantee specs 440-450 but transmit down to 420
or 430 atleast. I think the Euro version goes down to 430.

Hi Carl,

I think it was just a lighthearted piece recognizing the fact that a lot of guys have gotten active again since acquiring their new calls. The number of 1X2's out there on CW now has increased quite a bit over the last couple of months. It's actually getting really crowded at times on 40 and 20 meters - and that's even with pretty dismal band conditions. I think putting a new call on the air might be kind of like putting a new rig on the air.

A short 1X2 call is particualarly nice to send on CW, so guys are taking advantage of it. The theory goes that you're also more likely to be picked up in a pile-up with a short call. There are more advanced theorums which state that the last letter should end in a dah, and so on. Ideally, one would try to design a vanity call with the absolute minimum of dits and dahs. W0OOO would not be as desirable as N4ET for example.

So, when the new call comes in the mail, the first thing to do is try it out. Activity on CW does seem to have picked up. Hams are getting back on the air - even though conditions still stink (and they took a turn for the worse - went from 76 to 71 over the weekend). I think the author was just commenting on this as being a good thing. Not really so much of the dark side stuff as you claim in this one Carl.

Picked up this tidbit. Heard from several know-it-nots a while back that this stuff doesn't really happen. That companies are essentially loyal to all their employees WELL guess again.

The powers that be could have reopened the old plant under the new name, but didn't. Certainly would have cost less.

Just remember, look to see where the chief executive lives, because that's where you're going to live eventually.

EIMAC SELLS GLASS-TUBE DIVISION
Eimac is out of the glass-tube business. The former Eimac glass-tube manufacturing facility has been sold and relocated from Salt Lake City, Utah, to Easton, Pennsylvania. The new company, Triton, moved the former Eimac plant "lock, stock and barrel" from Utah to Pennsylvania, said Mark Hoffman, a senior scientist at Triton. In all, it took 16 tractor-trailer loads to move the plant's manufacturing equipment and inventories across the country. For now, Triton is manufacturing 46 different Eimac and Westinghouse tube types, including the popular 3-500Z, 4-400A and 4-400C. Right now, Triton does not make the 6146, 572B, 811A or 4-1000A, but Hoffman did not rule out the possibility that the company may tool up to manufacture those tubes in the future. Triton also makes glass tube chimneys and sockets.
Hams interested in obtaining small quantities of Triton tubes should contact the company's distributor, Richardson Electronics, Lafox, Illinois; tel 800-323-1770.
Eimac--recently purchased by an investment group, Communications and Power Industries--continues to make and rebuild ceramic external-anode tubes. It has been relocated to Palo Alto, California.

CW is a filter and it is working. As an active Vhf Uhf operator i will tell you that the kind of nonsense that occurs on hf doesn't happen on vhf. My conclusion is that the filter works,It keeps all the idiots on repeaters and hf and off of the weak signal modes. As a "no-code" I listen regularly to 75/80 mtrs 40,20 etc. If you can listen to that and tell me that code makes a more professional radio op. then you have deeper problems than a code test. I personnally don't think that the code is the big hurdle to overcome. Anyone who wants to know what a real hurdle is can go to the general portion of 75 and try to talk with one of the groups of regulars there and sign your call as temp AG.hope you dont have sensitive feelings.Perhaps the FCC should spend all the new found wealth collected from vanity callsignson some good old fashioned enforcement of the rules already in place before it considers letting anybody else on hf regardless of their code skills

> licensee ego gratification and agrandizement ... of course
> that's the primary purpose of the Archaic Retro Radio
> Luddites ... that and maintaining Morse requirements
> forever ...)
>

You seemed to have stereotyped all "higher class" ticket holders as
being in agreement with the ARRL. I'm one that is not in agreement with
the ARRL, on many issues. In fact, I no longer support ARRL, since I
believe that ARRL does not support ME; but that's my opinion. I wont
assume that anyone else shares my opinion.

ME:

WV2RSX - July 7th, 1961
WA2RSX - March 2nd, 1962
WA2RSX - sometime in 1968/Advanced ticket
WA2RSX - some date in 1978/Extra Class ticket

> So, folks, If you'll all just apply for new callsigns and forget
> about the real problems facing ham radio, things will just
> magically take care of themselves ... WHAT A CROCK!
>
What are your thoughts about "real problems facing ham radio"? Im
curious to know your definition.... of real problems. Are there any
problems, really?

> This sounds like more pro-code wishful thinking that all
> dissent from the growing majority of no-code and pro-no-code
> hams will just "disappear" and stop being a bother to the
> olde fartz of the Archaic Retro Radio Luddites ...
>
Your sarcasm and displeasure with the ARRL is rather obvious. I presume

that you are not a member at present.

> And it's sickening that there can be so much fucus on something
> as stupid and unimportant as vanity calls ...
>
You are entitled to your opinion(s) also, just as the author of the QST article is entitled to his/hers.... If the editiors of QST did their job correctly, the author's opinion is published in the article article; and is not necessarily shared by the ARRL membership, and/or administrators, and myself.

73s Carl.

Where did I say that?

>It seems to me that if the no-codes abandon the vulnerable vhf bands,
>then these will be left underused and undefended. I never heard of

Do you have any evidence that this would happen?

>Sure, if I were a lazy no-coder I'd certainly also be asking for no-
>code access to the hf bands. But I hope that I'd be honest enough to

I didn't suggest that, although I don't see any particular problem
with some movement in that direction.

>admit that it was just for my own benefit, and not invent the
>nonsensical and illogical myth that the very survival of the hobby
>depended on my getting it.

The survival of the hobby depends on a lot of things, none of which
has anything to do with Morse Code. Cutting through the bullshit
would help, however. Knowledge of Morse has absolutely NOTHING to do
with whether or not one is a lid, or whether one will be a good,
progressive ham. This whole argument is silly, and should have been
put to bed years ago.

HINT: My original post was sarcasm, designed to illustrate a point,
and not meant to be taken literally.

Wow. You're a real expert. Can you tell where a telephone call is coming

No one wants to kill the hobby. In fact, I think that eliminating tests altogether would give the hobby the boast it really needs. No code, no theory, and no rules/regs. Just fill out a form, send it into Gettysburg and get on the air when your license comes in the mail. Do you realize what a great boost this would be for equipment sales? The ARRL would have a much greater pool to market to as well. With all testing gone completely, ham radio sould be marketed as an alternative to cellular communications. No monthly charges or air time costs to pay every month. All you pay for is the radio. Plus, instead of being limited to only forty channels and 5 watts, you could have unlimited channels, adn legally run 100 watts on two meters! So eliminate testing today, and give ham radio the boost it needs!

THE HAM RADIO OPEN TOWN MEETING

And on Saturday, May 17th, Len Winkler in cooperation with Newsline will
be hosting a special live interactive forum and radio program from the 1997
Dayton Hamvention. Titled The Ham Radio Open Town Meeting, it will be
broadcast live from 3 to 5 PM Eastern time via the Internet using Realaudio
provided by Tucson Amateur Packet Radio.

There will be four topics for discussion in separate half hour seminars.
These include the obligatory "Should CW remain a requirement for voice
privileges on the high frequency bands." This will be followed by the
highly controversial question of should contesting be limited to certain
band segments only. Next is weather or not the Internet is good or bad for
ham radio and can the two co-exist? Finally, and possibly the most
emotional question will be weather the ARRL is doing all it can for Amateur
Radio or does it need some viable competition?

To make this happen, Len needs some well versed and highly articulate
hams willing to do battle with one another, with the live audience and the
listeners at home. They will be able to submit written questions via
e-mail.

Specifically, Len needs one pro and one con on each topic. They will be
permitted to go one on one to express their point of view and then it will
be the audience in Dayton and the listeners nationwide that will have the
final say.

If you have a strong point of view on any of these topics, please
contact Len Winkler, KB7LPW and offer your services. His e-mail address is
simple. It's:

lenwink@goodnet.com

(Via Ham Radio and More, Newsline)

Here you go Carl, and virtually in your backyard as well. 4 subjects you are an expert at. You can be your own panel. Love to see you there.

No fraternity ever prospered and grew by lowering it's standards. We must remember that this is the 90's -- the era of wanting more for less -- rights without responsibilities. Learning Morse requires discipline -- a word rarely found in today's vocabulary.

It may be a truism that Ham Radio is dieing. But if that is indeed the case, then let it die with dignity -- not surrendered to whiners, who demand something for nothing. This debate isn't about code -- it's about character, the willingness to earn privileges, not receive them as a gift. I say, If you can't be bothered to put forth the effort to learn the code, try needle point.

The no code advocates who moan so loudly on this newsgroup will never be part of the fraternity of Amateur Radio, Morse code or not. They have endless energy to critisize, but have nothing else to offer. Long live the cw filter, may it keep these loafers out indefinitely.

Howdy,
The main reason for the continued use of AM for the aircraft band
is the capture effect.If they used FM you would only hear the strongest
signal,which could be disasterous.

> 3) anything else???
>
> Anyone know the history of this?

(1) is the big reason. A 'basic' aircraft radio easily costs $2000 new and a lot more can be spent on one with 'features'. Flying is expensive enough already. There is a saying that the only way to make a small fortune flying, is to start with a large one. Many older radios are not to be used as of Jan 1, 1997 because the bandwidth is too large. Many airplanes also have 2 com radios making the switch that much more painful. BTW, radios are not required equipment for VFR flight in most areas, including a lot of airports. Anyone remember the commuter that ate a small plane in western ILL (Quincy?), probably a year ago.

Another reason is why fix something that ain't broke. AM works fine for aircraft.

This just gave me an idea. Why not grab the old defunct aircraft radios and convert to 2 meters? hmmmm

Hi folks,

As a 17 year-old I was at the 1947 Jamboree at Moisson, designated the 'Jamboree de la Paix' being the first one after WWII, and to my knowledge there was no Amateur Radio station on the site. I feel sure at this distance in time that I would have remembered because that was the time when the first seeds of Amateur Radio were germinating in my career.

In passing, . . . the site organisers had installed the railway from the Maginot Line to pass round the site on a circular track. It travelled at about 6-7 mph and never stopped. The accepted practice was to hop on and alight whilst the train was on the move.

In the early 70s I organised the station for our village Scouts . . . GB2HPS . . whilst my son was in the troop.

I just don't get it. What is it? People who have passed a 13 wpm or better code test "are so bad" on HF; these no-code proponents want to join them so badly they don't want to have to learn the code to do it. What gives? Are they trying to tell us you don't have to learn morse code to be a lid?

Enquiring minds want to know....

jim, wk1v

P.S. The more people you have involved in something, heck by shear numbers alone, you're going to have that many more bad apples in the barrel. You shouldn't generalize and say everyone of a certain class or classes is bad....but, then again, not everyone does...

>radio will die. Does anyone know how and when this strange idea
>started?

I already have legal access to 20 meters. Big thrill. The truth is that amateur radio is dying, both as a source of support for amateur equipment manufacturers, and as an all involving hobby. I don't see hordes of teenagers interested in amateur radio as a hobby, and unfortunately, looking at places like Dayton, or the Rochester event, hams are getting older, fatter, and aren't building as much as even ten year ago. Frankly, 5 classes of license are way too much, and I suspect that even three classes are really too much for continued growth. In fact, I suspect that the silent keys at time exceed the number of active hams coming on board now.

Let's be honest, 6 watt cw transceivers aren't state of the art today, and two band ssb transceivers with fewer features than I could get on a transceiver in 1981 aren't going to advance anything either. Let's see, no growth, old men, who don't spend money, time, or effort on the hobby except to learn the code, and you want code as a filter. A filter for what? About the only time HF bands are crowded is when there is a major contest, and even then, better design for contests would end that problem quickly. Just what do you want, cw as a filter, which not only doesn't seem to work, or hams, who are interesting to talk to. Ask yourself why so many hams are on the internet first, and ask where the young folks, who used to become hams are now hanging out, and the answer's rather obvious. CW may be a filter, but we don't need a filter of that type. CW is just an outdated phase of the hobby, one that some insist on using. In fact, I classify the members of SPAM and cw users as about the same. Nice sounding signals at time, and some put in lots of time, but it won't cause growth or interesting hams to be part of the hobby.

And foolish me I tried to confront Mike with some facts, what a silly boy I am. I might have told him that I have the equipment and technical skills to fingerprint their transmitters when they belch and later when they ID but that would just lead to another "Carl" tirade. I tried to teach the pig to sing again and as usual just annoyed the pig. BTW thanks for your insightful technical posts perhaps the casual observer will think a little more of amateur radio from your posts than they would reading from reading the tirades of morons like Mr. Denigan.

Perhaps and then there are some of us who have the equipment and
technical skills to record the startup characteristics of transmitters
(AKA fingerprinting) and compare those recordings with the same
characteristics observed later when the station in question does
identify. The jammers are well known and if you want to put in a little
effort you can establish just who is doing what. If you ask Carl real
nicely he might just explain to you how this is done I am sure he could
do something like this if he wanted to, in your case I'm not so sure.

Pray respond and add to your image.

A 13WPM code test today is basically an 8-9WPM code test.
With staggered copy at 8-9WPM you can effectively get the
requisite 7/10 multiple choice rather easily.

I too was disappointed with the hamfest. I remember when I first got
involved with amateur radio in the late 80's, the DVRA hamfest
was the one to go to in the armory.
This one had nothing but tailgaters with basically the same
equipment that I've been seeing for the last few years.

I think hamfests are becoming more of a social meeting place for
hams rather then a place to buy. No longer are we building radios
like we once have. (you only see the new hams that are unmarried buying
all the big junk)

The local equipment vendors are also falling by the wayside because
of the national chains. It doesn't pay the big chains to lug all that
new equipment when people will come to them.

Also, the directions that the club sent out on their flyer
were so terrible, it could be that all the vendors couldn't
find the place.

Hi Guys. The trick with "feeding" NiCads is to limit their intake while charging, even from a car. You can use a Voltage regulator like a 7805 or 7812 for this by putting the regulator in series following the Input from the supply side and output to the battery with the ground post attached via a resistor to the output pin. The feed rate is calculated by I=Vr/R where I=current, Vr=VoltageRatingOfTheRegulator R=resistor so a 7805 with a 33 Ohm resistor in place feeds at a .151 Amp or 151ma. I do not know what the feed rate should be for those NiCads, but I am sure it is mentioned somewhere.

6447. Boycott Peter Trapp Computer Shows

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-25 00:00:00 UTC
From: cjs9@cornell.edu
Message-ID: <5h8n15$i64@newsstand.cit.cornell.edu>
Source record: 201807

The Syracuse hamfest is *OFF* for 1997. The April LongWire will be outshortly
and there's a one-page article in it on what eventually derailed the event.
But in a nutshell, our terms of use for the Fairgrounds facilities would prohibit the sale of any "computer-related" item at the hamfest. broadly interpreted, this would have barred packet stations, logging software, callbook CD ROMS and so forth. Last year this provision was not enforced but
we were told that it would be enforced this year and several months of negotiations with Fair management could not get around this issue.

Will it be back in 1998? I don't know. Stay tuned.

73's, Steve

The above resulted from a direct threat by Peter Trapp to pull their shows if
any other user sells any sort of computer product, new or used. If it can
happen here it can happen where you are.

I am asking all hams to:

1- boycott Peter trapp shows
2- if you are a New York State resident, write the Governor

Tell me something, do you even bother to listen to HF? Ever worked a guy on CW, and heard his fist weeks later, and without hearing him give his call, know immediately who is sending because his cw is so distinctive? Most hams running amplifiers have fan noise, power supply noise, and relatively constant background noise, especially hams running vox when they jam, or key up, or make unidentified transmissions. Unless you don't pay attention, you too can do the same thing? Gee, the FCC monitoring stations used to use the same technique to identify folks at least preliminarily, and to get some idea of who was doing what.

Hi,

I would like to ask if someone have shematic for stereo decoder in SMD technique. Want to modify my SONY ICF-2010 to reproduce in stereo. If any NON SMD stereo decoder chip may operate on 4.5V DC I'd like to get that shematic too.

If I get modification done, will be glad to share my experience with other SONY ICF-2010 users too.

Regards,

Dragan Stojanovic <> dragans@eunet.yu

Pray tell how demonstrating a certain speed with an aural text decoding method does anything to prevent radiating a harmonic rich signal? Morse speed testing doesn't even involve RF, and does nothing to determine if the amateur is competent to adjust transmitting equipment for proper technical operation.

Now a skills test which *did* demonstrate such hands-on competence could be a worthwhile replacement for the Morse speed tests. But I'm afraid it would be a nightmare to administer.

6458. Question about aircraft using AM instead of FM

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-25 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <5h9d86$qlb@dailyplanet.wam.umd.edu>
Source record: 201818

I wonder, in these times of high-fidelity FM audio, why aircraft
and air traffic control centers utilize AMPLITUDE modulation.

Possible reasons:

1) Too expensive to switch all of those radios over to FM
2) No capture effect - weak signals can still be pulled out
3) anything else???

Anyone know the history of this?

>HF "because it takes too much bandwidth." Don't know my self, because
>I'm only just getting into VHF/UHF packet, and sticking to 9600 baud.

We're limited *by regulation* to 300 baud on HF (except for 10m). We could do much better, using spread spectrum technique, but that isn't permitted. The problem on HF is selective fading multipath. With a narrowband signal, high baud is a real problem. The symbols become distorted by multipath and the BER goes through the roof. In fact, under average conditions, a baud higher than 45 can suffer significant degradation on a narrow channel. But if you can spread the signal, you can avoid the selective fading, and maintain a reasonable BER at a much higher baud. The signal also becomes *much* more interference immune, and causes much less interference to other operators, if it is spread. But we aren't allowed to do that. Data transmissions are limited to a bandwidth of 1 kHz on HF *by regulation*.

Now the fact that we are limited to 300 baud does *not* limit us to 300 bits per second. We can use symbol overloading to encode more than one bit per baud. Clover II does this. It can give us 750 bps with a basic baud of 31.5, and fit it in a 500 Hz channel (that's about 900 WPM). Again, we could do much better, but the regulations are crafted to favor narrowband signals over wider bandwidth signals. That's a mistake, based on an antiquated theory of signaling efficiency, but it is the way the regulations currently are. We need to get those regulations changed.

>I would suspect that if you could find someone to work with, that 56K
>would not be unlawful on the UHF/SHF freqs, just difficult- afterall,
>the Bit error rate would add up due to multipathing unless you were
>working dish to dish LOS like the "big boys" do.

No. 56 kb works quite well on UHF. Our packet network is based on it. Multipath isn't a large problem for most links you would run. Our links are on 219 MHz, 222 MHz, and 430 MHz. We have one link which spans 90 km

on 70 cm, so even beyond LOS paths are possible using ordinary amateur yagi antennas.

To go faster than 56 kb, we have to move to the bands above 70cm because of limits on baud placed on us by *regulation*. We could go faster on the bands below 33 cm, but we aren't *permitted* to do so by the same sort of antiquated thinking which restricts us so severely on HF. We are experimenting with 1.2 Mb links on 23 cm. Propagation is different up there, and getting a LOS path becomes more important.

>IIRC, even 45 "baud" Baudot communications is substantially faster
>than the best Morse work- and there are folks working 1200 on HF freqs
>at this time- what does this tell you about the Morse masters?

45 baud Baudot is 60 WPM. Very very few Morse operators can match that. 1200 baud ASCII is 120 WPM. No Morse operators can match that (not to mention that they can't handle lower case, or a number of the punctuation symbols available in ASCII). As noted above, Clover II is about 900 WPM at its fastest speed (without compression), and drops to 19 WPM in its most robust form (where signals are below the human audible threshold). So under conditions where the average amateur could handle 13 WPM, Clover II can be running 900 WPM (or more with compression), and under conditions where the Morse operator has to give up, Clover II is still doing 19 WPM *error free*. And there are better techniques than Clover II which we could use *if the regulations permitted*.

There are no technical reasons we can't have very high capacity (relative to current practice) HF, VHF, or UHF links. The problem is simply a matter of regulations crafted under the incorrect theory that narrower is always better. It isn't. (And Shannon *proved* that in 1948. That gives you some idea of how far amateur radio regulatory policy lags behind.)

This is interesting and worthwhile work, but it isn't radio astronomy.
Once the meteors are inside the atmosphere, they fall into the province
of meteorology (even the name of the field is evocative of that fact).

>radio the boost it needs!

You're trying to be funny here, but I'm not at all convinced that your
idea would harm ham radio all that much. We'd have to return to our
tradition of self-policing and Elmering, so that new hams would learn
the minimum required to be good operators. You have to realize that
with all the alternatives available today, there's not all that much
incentive to become a ham, even if you were giving out tickets on the
street corner. A basic ham test only needs to address rules and
operating procedures.

If you required new hams to take a class from an approved, tested club
or such organization, they could be instructed in the basics of ham
radio, and the club could issue a conditional license. This license
could become permanent after a certain number of hours of operating
with no verified problems being reported.

This is just off the top of my head, so there are lots of flaws in the
idea, but it's something to think about.

>background radiation, eh?

Well, probably not. But what the FCC does is they monitor the activity
and record spectral fingerprints. When a station does identify, then tag
the fingerprint with the callsign. For a resonable sum of money, you can
by equipment that will do the same thing - or, you could just listen to
the voices of the major players for long enough and they eventually ID
their station.

Does anyone use the 33 cm band; 902-928 MHz?

It sounds like it would be a good band besides having to share it. I haven't seen or heard of any radios that would accually Tx on it, but plenty that Rx it.

Thanx,

Actually what you read was Anderson's Hollywood version of what he
thought happened. BUT as we all know, Hollywood always makes sure that
things end up with happy endings, even if they are light years apart from
the truth.

Then again, Anderson does live near The Yellow Brick Road (remember his
fascination with strawmen??)

Actually what that tells me is that you lack the equipment and/or
technical skills to do this properly. It cane be done effectively by
those who know how. Those who can't might say it doesn't work.

>
>
>> from reading the tirades of morons like Mr. Denigan.
>
>More name-calling Jerry?

Name calling, not really, descriptive perhaps, but not name calling.
Oh wait now I understand how you might have thought it was name
calling, kind of like refering to Carl as "Squiggie", I can see how you
might make that mistake.

To cut to the chase, you have your opinions and are unlikely to be
confused by facts. This will keep you from firing up a receiver and
seeing what I and other have said is true about the "filter" not
working so I will not waste any more time arguing the matter.

Could be. My point was there is a whole new crop of transistorized
aircraft radios that were tossed on the scrap heap 2-3 months ago.
Perfectly good radios, just don't meet the narrower bandwidth spec, or
the model has not been certified for the new bandwidth. Might be fun to
play with.

It is -- put together by someone who feels they have a cross to burn ...

or who wants to be seen as a hero of some sort amongst the faction who spent their only available $12.00 on a couple of six packs. The whole idea is ill advised and just dilutes the level of support and knowledge that would be available in one list with focused expertise and experience. Of course, there are people subscribing by the bezillions, but people would subscribe to lists on bologna and cheese sandwiches at an even higher rate. The possession of an internet ID and mail account is no guarantee of IQ .... Franky, having to subscirbe to 40 lists, each with the same basic members, but each focusing on narrow discussions of one manufacturer or whatever to get the breatdth of BA discussion is useless. Maybe I should start a list devoted to Hammarlund equipment manufactured between 8:02am and 9:22am on March 22, 1956 ?
Its all an ego trip of major proportions ...

;-)

Grant

>1) Too expensive to switch all of those radios over to FM

This is what the aviation industry has proclaimed.

>2) No capture effect - weak signals can still be pulled out

The big advantage is that, thanks to no capture effect, weaker signals can still be noticed, if by nothing else than by the presence of a hetrodyne, when doubles occur.

>3) anything else???

The big problem is the logistics of the changeover were it to occur. The change would need to be worldwide, both air and ground, all at once, including aircraft in the air at the time, in order to maintain order in the ATC system. That would be a nightmare.

The industry has decided that AM is "good enough" for their purposes, and any benefit from switching to FM would be less than the cost and logistics of making a change.

>
>No fraternity ever prospered and grew by lowering it's standards.

The amateur radio service is not a fraternity. It is a government licensed radio service designed to allow private individuals to gain access to public spectrum in order to serve charter goals.

>We must remember that this is the 90's -- the era of wanting more for less
>-- rights without responsibilities. Learning Morse requires discipline
>-- a word rarely found in today's vocabulary.

Discipline is something you learned goose stepping in the fuhrer's army. Discipline is something you learned in prison. Discipline is something instilled in you by de Sade's followers. Discipline is not necessarily a good thing when its purpose is irrelevant and arbitrary. It is a way of developing a group whose after the fact excuse is "I was only following orders."

The character traits we'd prefer are those of personal responsibility for one's actions, and self-motivation to advance the charter goals of the amateur service. Unfortunately there is no test of such character traits which would pass muster as part of a legitimate government licensing exam. Even psychologists admit that there are no real predictive tests at all for these traits. One must wait and see the result in the field.

>gift. I say, If you can't be bothered to put forth the effort to learn
>the code, try needle point.

The debate is about the relevance of particular government licensing requirements for access to public spectrum. The legitimate purpose of such licensing requirements has never been about character. It has been about satisfying the government's legitimate concern that you know what you are doing when given access to public spectrum so that you won't cause harm to yourself or others through ignorance. No more, no less.

>The no code advocates who moan so loudly on this newsgroup will never be
>part of the fraternity of Amateur Radio, Morse code or not. They have
>endless energy to critisize, but have nothing else to offer. Long live
>the cw filter, may it keep these loafers out indefinitely.

BS. Those of us who have labored long for reform of amateur licensing are not loafers. Nor are we whining for something we do not possess (check the call sign). We are trying to drag the amateur service into the late 20th century so that it will again serve a relevant public purpose. By so doing, we have a chance to justify and preserve the access to spectrum government has granted us. Playing stupid beep-beep games won't do that anymore (if it ever did).

>on 75 and 20 meters. Hal, take off the blinders as you
>needent convince us that you are a jackass.

Hi Pom - don't be so mean, okay? Your first post and you're already calling someone names.

Now, the trash you hear on 75 and 20m constitutes less than 1% (6,000) of US hams.

That the code is a filter can be seen by listening to those who use it as their first mode. Tune down to the low end of the bands to hear the filter in action. You won't hear any of the garbage that occures on the voice segments.

13wpm test? Yes, it would appear the scum and riff-raff have no trouble passing that easy fill-in-the-blank exam. That they don't use code as their first mode shows the code *is* working as a filter - they get filtered out and remain on SSB. (Maybe we should eliminate SSB since 1% of our population abuses it?)

>CB'er since 1973

That's wonderful.

That's certainly true. "Meteor" means any atmospheric phenomenon. But
we know the study of objects within our atomosphere still falls under
the science of astronomy. Astronomy and meterology are not disjoint
fields.

If we still had a code requirement this kind of comment and lack of
civility would not be coming from a licensed ham radio operator. The
code filter is working Mr. Krempa because your license class will keep
you off the HF bands, at least for now.

Children please,

One side whines that CW is slow and inefficient. Going along with that mentality, people who use CW talk (slowly) about nothing except, what, how big their antenna is, what their power amp rating is, and what far off station they just talked to.

Now the other side...

With the latest digital techniques, what are we up to, about 20kbaud? And what do you guys discuss that necessitates this high speed throughput? Nothing. Sorry, not quite true, there's how big the antenna is, what the power amp rating is, and what far off station was just contacted. Only difference is you run out of things to talk about much faster...

As soon as the satallite phone system is in place, you digital guys will sell your ham equipment, right? I mean, you want the very latest in maximum data throughput. No one wants to settle for that "old technology", right?

Give it a rest, it's a hobby. Each of you imply you're somehow better then the other. The joke is, people outside this hobby view each of you as the _same_; geeks!

Feeling defensive? Thinking "I don't care what other people think?"

Really? Then let other people use CW or digital, or whatever they want.

Like a bunch of spoiled children,

Jake Brodsky <frussle@erols.com> wrote:
>Only later did FM come in to common use in the VHF spectrum. However,
>by then there was too much of a user base world wide to turn back.

The maritime service, back in '75, had to switch from AM to SSB. This
involved every ship and boat worldwide. (Which was great for hams! All
of a sudden a goldmine of HF gear at rock-bottom prices became available.)

>As for the capture effect, I think it would help rather than hurt. If
>you have two AM transmitters on top of each other, they tend to mess
>each other up pretty badly. At least with capture effect, one of them
>(usually the closer one to your receiver) will get through. It would
>be a godsend to all those folks on unicom channels who are tired of an
>airport 50 miles away causing interference with local traffic calls.

I believe air traffic controllers *want* to know when aircraft are doubling
with each other - FM would defeat this desirable quality. In that respect,
SSB would seem a logical replacement for AM (this is, if AM were
to be replaced with another mode).

>Not sure what point you are trying to make here Jeff, and I don't know
>how long ago you were a SoCal fireman.

You edited out the point I was trying to make. Did you read Len Anderson's anti-RACES, anti-ham comments, and how "wonderful" LA County's comm systems went without the help of hams? Re-read what you edited out, then re-read what I wrote.

You don't need to tell me about how hams can save the day. I've seen it myself here in Hawaii. After a hurricane, the only radio systems still operating are those belonging to amateurs. Unlike Len, I'm pro-RACES and pro-ARES; I *know* how vital hams are during disasters, and so does the state of Hawaii. Our state-wide rptr system rides on state-owned microwave links; the state makes every provision possible for hams.

Vince <WA2RSX@worldnet.att.net> asks:

>What are your thoughts about "real problems facing ham radio"? Im
>curious to know your definition.... of real problems. Are there any
>problems, really?

Here, let me help. A few problems we face (not a comprehensive list
by any means) are:

- Incompetent, elitist, and unresponsive leadership, caused in part by
apathetic hams.

- Internecine fighting over nonsense such as the code/no code issue.

- Failure to adapt to changing technology.

- Failure to recruit young hams, and to accept and Elmer the ones who
do become licensed.

- Inability to cooperate with each other in things like packet nets.

- Failure to self-police our own members, which we have traditionally
done. Whining to the FCC is both futile and counterproductive ion
most cases.

- <add your own items here>

There is a new LISTSERV e-mail list for BOATANCHORS enthusiasts that I
just discovered! The best part is that it is FREE!!
To subscribe, send an e-mail message to:

LISTSERV@LISTSERV.TEMPE.GOV

with no subject, and the text:

subscribe boatanchors <Your Full Name>

The only odd thing is that it wants you to send you name with a middle
initial otherwise it rejects the subscription.

For example, I had to send:

subscribe boatanchors Brian J. Carling

See you there!

Just FYI, it's a 600 ma battery pack, so C/10 charge rate is 60 ma.

To further qualify my response from yesterday:

I charge my battery packs with regularity from the car. BEFORE I did this for the very first time, I did some investigation. LOOK AT THE SCHEMATIC. There is a voltage and current limiting circuit BUILT INTO THE BATTERY PACK. I took mr. ammeter out to the car to verify. Yep, drawing a mighty 57 MILLIAMPS when powered from the lighter socket. The circuit works as expected. All is well in the world.

Of course, RS will tell you not to do this.

So, back to which adapter - go with the 12 Volt unit. And don't listen to anyone that tells you that much current will blow your pack. Just because a DC adapter is CAPABLE of providing 1 Amp does not mean that it will FORCE 1 Amp through the circuit. It just means that you: a) Have an adapter that will run cool while charging the battery. b) Have an adapter that can, theoretically, recharge 15 packs at once.

Good luck, 7 3, YMMV, etc.

Hey guys - I wanted to let you all know that I have found a really
great web site for homebrew articles and projects on-line
that I think many of us do not know about!

It is a branch of the G3YCC QRP page in England that has
SM0VPO's projects:

http://www.gqrpclub.demon.co.uk/sm0vpo_1.html

Give it a try. There are numerous tube and transistor transmitters
and receivers shown there. Really great!

I hope you find it interesting as I did!

Our bands are being threatened, antenna, and RF-power, restrictions are being considered. If you have something to say that will further ham radio interests, you can quickly and easily e-mail your representatives on these issues. at

http://www.sarrio.com

I offer a complete list of Senatorial and Congressional e-mail links to all members of Congress that receive e-mail. Follow the Political Action links on either my graphic or text only home pages to the Congressional E-mail Link.

I would suggest,however,that if you e-mail Congress, that you limit your e-mails to only your own district representative or state senator. Include your name and address, this will inform your representative that you are one of his/her constituent and he/she will be far more likely to seriously consider your letter. Also try to be civil and informative in your message, remember we need their support.

You would need to set up a metering circuit for tests. One fail-safe
way to charge NiCads is to charge them for 15 hours at a rate of
one-tenth the design capacity.

If the charge rate you observe is in this 10% ballpark, just calculate
how long it will take to put in 150% of its rated capacity, and go
with that when the cells are fully discharged.

NOTE: The ratings on your charger do not indicate that it somehow
"forces" that much current into the load - it merely indicates the
rating beyond which you can expect it to fail internally. The amount
of current which flows in the circuit depends on the circuit, not the
"rating" of the charger. This is why you must actually set up and
measure it. Got a meter? Get one. Got a callsign? Use it with your
posts.

Personal Electronic Picture Album

Share your Pictures with all your Family and Friends without making duplicates
for one low price!

Download a sample program: http://members.aol.com/lacyent/lacyent.html

Lets look at an example of how pictures are currently shared. You have a birthday party for your three year old and some of the relatives can't attend. So you take a roll of 36 pictures
during the course of the party. You get the pictures developed for $5.79 and now want to send some of the pictures to grandparents, aunts & uncles and the brother in college. You choose the 10pictures you want to share copies of, spend a total of $60.00, to make duplicates for 6 copies of the 10 pictures. So far you have spent a total of $65.79. A couple
of weeks later you are talking with a friend who lives in another state and they ask for a few
pictures, so you spend money to make more copies and send them off.
BOY, what a Hassle and Expense.

With the Personal Electronic Picture Album, you send in 10 pictures of your choosing, and we
send you back a program that displays the 10 pictures. (We also send back the pictures) You can now send the Electronic Picture Album to anyone you want. What would you say if I told you that you could send those pictures to anyone you want for only $14.95? YES, that's right,
for only $14.95 you can send your 10 favorite pictures from your child's birthday party, Christmas, the recital, or any occasion you want. Just think, if you sent the 10 pictures in a
Personal Electronic Picture Album to the same 6 people above instead of making duplicates , you would save $50.00 and be able to send the pictures to all of the people you want.

Want to see an example of the Personal Electronic Picture Program at no charge? Then all you have to do is download the file now. Goto http://members.aol.com/lacyent/lacyent.html

We will send the Personal Electronic Picture Album via E-Mail and return your pictures via regular mail.

Picture Albums with 10, 15 or 20 pictures are available. Visit our Web site for complete ordering info, price lists and to download a sample program. Mention discount # 12559 and take a 10% discount on your order.

Goto: http://members.aol.com/lacyent/lacyent.html

Amateur radio, although often viewed as a fraternity,
is most defineyly not. It is a government allowed service
and testing requirements for any service MUST be relavent
to the goals, needs and purpose of the service as viewed
in contemporary communications.

The fact that anythin (morse or otherwise) requires discipline
is NOT any reason to retain it as a test element. No where
in Part 97 is discipline a requirement of the service.
In addition, as some have noted, there are those that
learn morse with no effort or disciplin because it comes
naturally to them. The bottom line, again, is that we
do not, nor can we, ever truly test for individual
discipline. Such subjective test objectives have no place
in the amateur test requirements.

My website has a free download of Amateur logging
software - and alot of other computer related programs too ! The
database is in full color, has logging, QSL functions, access
QRZ! cd-rom, search DX prefixes, ten minute timer, colorful
world maps with call prefixes for reference, awards tracking,
screen savers, English/Metric conversions and much more !

You can find it at http://www.esdi.com/log-it

There is also a bulletin board for Amateur Radio related stuff.
You can use it for messsages, sell/trade/buy, computer problems,
track DX and all kinds of things !

The site has a chat service for maintaining contact when the bands are
down and other times too !

Take a look ! Thanks .... Jim

I'm running a contest that gives away free logging software !
The website has lots of other neat stuff too ! Like links,
shareware downloads, etc. Thought you'd like to know.

Go to : http://www.esdi.com/log-it

There is also a bulletin board where you can post messages,
buy/sell/trade equipment, get help with your computer problems, locate
software/hardware, keep track of DX operations and post notices
regarding good DX on the air or just keep track of old friends.

Try the CHAT SHACK while you are there. Get some friends together
and keep in touch when the bands are down or anytime !

Take a look ! Thanks ... Jim

>3) anything else???
>
>Anyone know the history of this?

Aircraft radios use AM for the same reason we use the MW AM broadcast band: history.

Aircraft were one of the first mobile users on the VHF bands. Back then, AM was far better known than FM was. They used AM for everything. It worked. It became an international standard.

Only later did FM come in to common use in the VHF spectrum. However, by then there was too much of a user base world wide to turn back. It's bad enough trying to move frequency allocations in this country --imagine what it would be like to make that happen world wide. So that's the way it has been ever since. Incidentally, VOR navigation technology also dates back to the same era. It too is based on AM.

FWIW, AM doesn't sound all that bad. Most audio quality problems can be traced back to a lousy mic or noisy intercom system.

As for the capture effect, I think it would help rather than hurt. If you have two AM transmitters on top of each other, they tend to mess each other up pretty badly. At least with capture effect, one of them (usually the closer one to your receiver) will get through. It would be a godsend to all those folks on unicom channels who are tired of an airport 50 miles away causing interference with local traffic calls.

Trapp on April, 12 and 13
LARC on April, 26

Now, who is the goof? Trapp or the Syracuse State Fairgrounds
Administration?

If a Threat from Trapp resulted in the Hamfest being cancelled, the difference in dates would give the Liverpool Amateur Repeater Club Inc. a solid foundation for sueing Trapp ... they had expenses in preparing the show, didn't they? And as Trapp's show will long be gone into oblivion, when the Hamfest was to start, there even is no need to "defend" Trapp's show...

If the Fairgrounds Administration fouled up, then it seems high time to have some heads roll in Syracuse... To know the basic arithmetics of the calendar, and also some common sense are the least to be expected from people who are paid from our taxes. And if some guy does not qualify in that respect, I don't see a point of wasting tax money on him or her (or maybe even: It)...

There is just no point of "defending" a show from competition, if the non-competing show takes place TWO WEEKS AFTER the show that needed to be ... err .. "defended".

I guess, if the LARC really would want to set things straight once and for all, it could become a real expensive experience for either Trapp or some state employee. And certainly, some Syracuse lawyer will cry tears of joy for such a windfall...

In article <3351b827.37097363@news.cyberhighway.net>, glenq@NOSPAM.cyberhighway.net (Glen Quarnstrom) writes:

>Vince <WA2RSX@worldnet.att.net> asks:
>
>>What are your thoughts about "real problems facing ham radio"? Im
>>curious to know your definition.... of real problems. Are there any
>>problems, really?

Glen:

Let me address some of your responses:

>Here, let me help. A few problems we face (not a comprehensive list
>by any means) are:
>
>- Incompetent, elitist, and unresponsive leadership, caused in part by
>apathetic hams.

This is mainly the result of hams not being willing to TAKE a leadership role in clubs, and to support the ARRL. The present-day paradigm is to get your No-code Tech, set up a 2-meter station, then sit at the rig all day engaging anyone who'll answer you in banal conversation. Good use of spectrum, this isn't. But when it comes time to actually DO something different, or someone suggests learning something new, the excuses start rolling in! When people do get into a leadership position, they immediately become power-hungry and start looking for ways to control people. Quite frankly, it's sickening!

>- Internecine fighting over nonsense such as the code/no code issue.

Created by people demanding that our traditions and standards be lowered to meet the needs of pop-culture commercialization of our hobby/service. Don't worry....when us "Olde Fartz" die out, so will the standards, and then the rest of the ARS will crash and burn.

>- Failure to adapt to changing technology.

Is the ARS about "changing" technology or understanding "basic" technology? Is it about "throughput" or is it about learning and understanding the essential basics of communication by radio? "Throughput" is a commercial concept; amateur radio is a service of training and intercommunication for a non-commercial class of hobbists and experimenters. Sure, we can exploit technology at any level we choose, but the level the individual average ham is at is largely dependent on his financial circumstances, time, expertise level, and even his willingness to devote him/herself to the

acquisition of knowledge. Unfortunately, we're not doing too well
in the latter regard right now.

>- Failure to recruit young hams, and to accept and Elmer the ones who
>do become licensed.

I have absolutely nothing to motivate me to recruit more users of the
2-meter band...we already have plenty. Whenever I try to interest a
new ham in CW, Packet, RTTY, and upgrading his license, I am
accused by my "moral superiors" of "having strong opinions." So
why should I bother if my ideas are rejected out-of-hand because
they require others to make a bit of an effort to better themselves?

>- Inability to cooperate with each other in things like packet nets.

You have my sympathy there. I see packet radio as a good idea that
never really got off the ground. However, a big problem is the unwillingness
of most hams to make a significant financial investment in anything, even
if it's for their own mutual benefit.

>- Failure to self-police our own members, which we have traditionally
>done. Whining to the FCC is both futile and counterproductive ion
>most cases.

It's difficult to "police" something without the authority to take action
against "offenders." If you become an Official Observer these days,
they don't even want you to send "pink slips" to violators...they want
you to send "attaboys" to good operators! The FCC simply doesn't
have the resources to enforce it's own regulations, so we hams have
to put up with chaos which will inevitably ruin our service. Talk about
being caught between a rock and a hard place...

>- <add your own items here>

Not too much to add...it just seems to me that the decline of the ARS
reflects the general nosedive our society is taking as a whole. I'd like
to think that we can maintain our standards and serve as an example
of how it's done, but that's apparently too much to ask. I guess we
hams have had a good run...but all good things eventually must come
to an end. I fully expect to see the ARS extinguish itself within my
lifetime.

>Jeff KH2PZ (former SoCal fireman)

Not sure what point you are trying to make here Jeff, and I don't know how long ago you were a SoCal fireman. But since the Homestead hurricane and the Oklahoma City bombing there has been a revolution in emergency preparedness - spearheaded by the Federal Emergency Management Agency - particularly here in Southern California.

I was here for the Laguna Beach fires, and the local amateur radio groups played a pivotal role in communications. The Laguna Beach SOARA 2 meter repeater was the only effective communications link out of Laguna Canyon. Firefighting resources were spread agonizingly thin. Amateur operators served the fire agencies in crucial roles as spotters, and provided interagency communications between fire, Red Cross, and police. A lesson was learned from the example set by amateur radio back then, and the Red Cross now a repeater cited next to ours.

Groups such as the Irvine Disaster and Emergency Communications (IDEC) and Orange County RACES serve as archetypal organizations, whose sophisticated preparations techniques and infrastructure serve as models for emergency groups all over the world.

The National Weather Service and the American Red Cross are evidently convinced of the service ham radio operators provide in an emergency, as they both stepped up to the plate in our defense of the threat to the 2 meter and 440 MHz bands.

In fact, just about every informed municipality in Southern California now includes ham radio communications as part of their emergency preparedness plan at the behest of the California Office of Emergency Services.

Believe me, none of these people ask if you know Morse code before they accept your assistance. But they do appreciate our efforts in emergency preparedness.

From: prografx@teleport.com
Message-ID: <5hbt5v$4g7$1@nadine.teleport.com>
Source record: 201774

With FM, the strongest signal "captures" the receiver and is usually
the only signal heard. A second signal weaker in strength may only
make a minor background warble. An equal signal will tend to make
BOTH unintelligible.

With AM, it is possible to hear multiple different transmissions
simultaneously. Two or three simultaneous transmissions may create
some heterodyne howls (just like AM CB), but you can clearly determine
that there ARE multiple transmissions, and in many cases you can
discern intelligence from all of them at the same time.

I would think "all of the above" applies, although the above mentioned
"capture effect" argument is probably is the best technical reason.
The expense would be the best economic reason.

I am sure there is a politcial dimension to this, but I am not exposed
to it so I can't comment. EVERYTHING these days has a political
dimension (thanks to politicians and lawyers IMHO).

Subject: Re: Syracuse LARC Hamfest??? Whats the story?

Carl,

Here it is.

Steve

- -

The Peter Trapp Computer Show is held at the New York State Fairgrounds
every
2 or 3 months during the year. As part of the agreement between Peter
Trapp
and the management of the New York State Fairgrounds, no other events
are
allowed at the Fairgrounds within 45 days of a Peter Trapp event that
would
compete with his event - that is, no other events where computer
hardware or
software are sold.

While this agreement remains basically the same in 1997 as it was in
1996,
last year LARC had little problem with this requirement. About the only
impact on SpringFest '96 was that Fairgrounds management requested that
a
sign outside our event, advertising a computer distributor as one of our
sponsors be removed. We did and there were no further issues.

Apparently both Fairgrounds management and Peter Trapp subsequently
became
more sensitive to the issue of computer hardware and/or software being
sold
at our event, for we were informed that in 1997, *NO* computer hardware
or
software could be sold by LARC, by our exhibitors, or by &#65533;tailgaters.&#65533;
Carried to it's extreme, this would have prohibited even the sale of

packet
radio equipment, logging software, and hamcall CD ROMs.

A number of appeals were made to Fair management and to Peter Trapp - with no
avail. Mike Bragman even interceded on our part with Fair management - again
to no avail. So we were faced with several choices: 1) proceed with
SpringFest '97 and hope that things worked out; 2) move SpringFest '97 to a
different location; or cancel SpringFest '97. Not wanting to subject our
vendors and tailgaters to possible harrassment over the sale of any
computer-related items, we chose to cancel the event for this year.

Well, I've tolerated the fake moonlanding nonsense, the electrical current cancer killer rubbish and the pyramid power crap. But saying that there might be an alien spacecraft shadowing comet Hale-Bopp is the last straw.

Disregarding all the others, how many Hams are still alive who received signals not just from the Apollo spacecraft, but from the ALSEPS instruments left on the moon? That alone should show that something went to and from the moon. At some point, a hoax would become more elaborate than doing the actual event.

I know he was always out there. But IMO, he has crossed the line from being just controversial to being a pseudo-science promoter.

Maybe. But unless the signal strength difference was dramatic you'd
hear some squeal in the background to let you know what was up.
Remember that aircraft communicate exclusively with line of sight.
The difference in signal strength isn't nearly what it might be on the
ground with indirect communications paths.

As a pilot, I think the benefits would outweigh the disadvantages.
Unfortunately, it isn't going to change. The real reason we still use
AM is because it is an old world wide standard. Changing it would
require changing ATC equipment in every single country in the world.
I doubt that's gonna happen any time soon.

If you are a repeater owner/control operator, it is VERY handy to have
a handheld with 430-440 MHz coverage in order to remotely control the
repeater on its control link.

Other than this application, I personally have never need any coverage
below 440Mhz.

ARRL/VEC fax number; RS-16 Update; Alinco
cuts prices again; Pre-WW II YL information sought;
ScoutElmer Award; 1997 AMSAT-NA conference
last call for papers; Improved WM7D call sign database

PHASE 3D LAUNCH PUT OFF UNTIL SEPTEMBER

Modifications to the Ariane 5 rocket's electrical systems and software will mean another costly delay for the Phase 3D Amateur Radio satellite. The European Space Agency (ESA) announced March 24, that the Ariane 502 which will carry Phase 3D aloft from Kourou, French Guyana, has been rescheduled for a mid-September launch. ESA said the schedule change was in response to recommendations of a board of inquiry that looked into the causes for the failure of the Ariane 501 launch last year.

"This additional action, which does not call into question the design of the launcher nor its flight readiness, is intended to improve its robustness, increase the operational margins and allow for degraded operating modes," an ESA press release said.

In a joint statement a day after the ESA announcement, Phase 3D Project Leader and AMSAT-DL (Germany) President Karl Meinzer, DJ4ZC, and AMSAT-NA President Bill Tynan, W3XO, expressed continuing confidence that ESA and CNES (the French Space Agency managing the Ariane 5 program) will succeed in completing all the tasks necessary for a successful flight test of Ariane 502. "Naturally, we are disappointed that our launch will not be as soon as we had hoped," said Meinzer. "However, I am pleased that ESA and CNES are taking care to improve the operational margins for the Ariane 5 booster. This action helps give us renewed confidence in the overall probability for a successful launch of our satellite."

Tynan said a complete analysis had not yet been done but that he believed the delay would add "on the order of $100,000" to Phase 3D's cost. That's on top of an estimated $200,000 combined funding shortfall that AMSAT-NA and AMSAT-DL were reporting in late February. So far, AMSAT-DL has invested nearly $1.6 million in Phase 3D, compared to nearly $1.4 million for AMSAT-NA.

Phase 3D fund-raising efforts will continue. "Every month adds costs," Tynan concluded. "This shortfall can only increase now as a result of this latest schedule change." Both AMSAT leaders urged everyone to continue doing as much as possible to insure the needed funds will be in place for the completion and launch of Phase 3D in September.

Earlier this year, the Japanese AMSAT group, JAMSAT, helped bridge the funding gap by transferring $50,000 to AMSAT-NA. The money represented excess donations from JAMSAT members for the Phase 3D SCOPE camera. The completed SCOPE camera, designed and built entirely by JAMSAT, has been installed and successfully powered up at the Phase 3D Integration Laboratory in Orlando, Florida, where preparation and testing continue.

Tynan emphasized that the Phase 3D team plans to take maximum advantage of the schedule change to perform additional testing. "It's not time being wasted," Tynan said, adding that the Phase 3D team "will use the delay to be even more sure about the spacecraft's readiness."

Prior to announcement of the latest delay, AMSAT-NA Vice President Keith Baker, KB1SF, had been reporting that AMSAT was racing to meet the early July launch schedule and that work on the satellite was moving along swiftly.

A series of pictures of Phase 3D work in progress is available via the AMSAT-NA Web site at http://www.amsat.org. Depending on its workload, the integration team hopes to be able to update these photos as work progresses.

ATV ROCKET LAUNCHES SET

The Aerospace States Association Rockets for Schools program has announced plans to launch three rockets during May that will carry Amateur TV (ATV) payloads. All launches will use 11-foot-long Super-Loki sounding rockets identical to the rocket used for the successful Wisconsin Rockets for Schools program launch in May 1996 described in "New Heights for ATV" (QST, Feb 1997).

On May 10, a Super-Loki rocket carrying an ATV payload on 439.25 MHz with GPS data on the audio is scheduled to be launched from Cape Henlopen State Park in Delaware. If successful, the event will mark Delaware's first suborbital rocket launch. The Aerospace Education Department and the Delaware AeroSpace Education Foundation are sponsoring the project in conjunction with the Aerospace States Association and several other supporting agencies. Teams of students in grades 7 through 12 are being recruited to assist in designing and building various payload components. For the latest information on the Delaware launch, see http://www.dpi.state.de.us/dpi/launch/ on the Web or contact Sam Guccione, K3BY, e-mail sguccion@outland.dtcc.edu.

On May 17, two Super-Loki rockets carrying ATV payloads will be launched at separate times from Sheboygan, Wisconsin, on the shore of Lake Michigan (the site of the May 4, 1996, launch). Current plans call for the first to transmit ATV on 434.25 MHz with Morse code telemetry on the audio, and for the second to transmit ATV on 439.25 MHz with GPS data on the audio. For the latest information on the Wisconsin launches, see http://phy.mtu.edu/rocket/ on the Web or contact Greg Heinen, KB9OBV, at heineng@orbitec.com, or Bryan Suits, WB8WKN, at suits@mtu.edu.

The Super-Loki rocket, which uses solid propellant, can carry the payload to altitudes of more than 30 miles.--Bryan Suits, WB8WKN

"ROCKOON" LAUNCH FOILED BY RFI

Bill Brown, WB8ELK, reports that an RFI problem led to scrubbing the planned North Carolina launch from a balloon of an amateur rocket carrying ATV and APRS systems on March 22 (see "'Rockoon' Bearing ATV to Launch March 22," The ARRL Letter, Vol 16, No 12). The group of space enthusiasts, which includes several hams, has rescheduled the launch of the "rockoon"--a rocket launched from a high-altitude balloon--for late April.

"We were all ready to launch the rockoon system when--just three minutes before liftoff--we heard three loud pops from the rocket gondola," reports Brown, the group's "balloonmeister." "It turned out to be the cutdown squibs." Brown said the cutdown squibs were intended to fire after seven hours to let the rocket gondola and balloon descend--in case uplink commands failed--so that the balloon would not fly unattended at night. But RFI caused the timer to go off after just a few minutes, causing the malfunction.

The Huntsville Alabama L5 Society (HAL5)--a chapter of the National Space Society (NSS)--has spent the past two years developing and testing components for the rockoon. The HAL5 program is called Project HALO, for High Altitude Lift-Off.

Brown said that while the rockoon launch did not go forward, the group did take the 434-MHz ATV transmitter (with live TV camera views) off the rocket gondola and flew it to 55,000 feet attached to a small weather balloon. "Hams across North Carolina were treated to spectacular views of the Carolina coast sent down from the payload," he said. Unfortunately, the payload parachuted down just two miles west of Wilmington, North Carolina,

and landed in a swampy area just north of an industrial park, where the crew was unable to recover it. Joked Brown: "The alligators probably have eaten it by now!"

A new launch date has not yet been set. For more details check the HALO Web site at http://iquest.com/~hal5/HALO/SL-1/ or e-mail hal5@iquest.com.

NEW, IMPROVED TRANSCEIVERS ON THE HORIZON

Yaesu's new FT-920 HF/6-meter transceiver will be available in early May, the company announced this week. The radio already is being advertised for sale in some overseas ham radio journals. Yaesu says the FT-920 will offer 100 W output on all bands; digital signal processing (DSP) in all modes (with auto notch and noise reduction); built-in antenna tuner, memory keyer and RS-232C level converter; and MOSFET finals. It's expected to retail for under $2000.

ICOM has announced the IC-706MkII, with several improvements and additions to the popular tiny HF/VHF transceiver at the same price as the original IC-706. The MkII will offer slots for two optional filters, a "sub" dial (to tune the second VFO or for RIT), 20 W output on 2 meters, a separate band-change key, crossband split, band-stacking register, and better sensitivity outside the ham bands. The MkII should be available in May, according to ICOM. No retrofits are possible for existing IC-706s.

Ten-Tec has announced the OMNI-VI Plus, an upgraded version of its popular HF transceiver. The OMNI-VI Plus includes DSP noise reduction, low pass, auto notch and adjustable CW offset (with tracking sidetone) plus another filter position. A retrofit program is available for current OMNI-VI owners. The OMNI-VI Plus is priced at $2585.

SPANISH HAM RADIO PROGRAM TO DEBUT

Starting next week, Radio Mexico International will launch a new Spanish-language program aimed at sparking interest in Amateur Radio and shortwave listening. Estacion DX (DX Station) will debut April 2 at 0200 UTC on XERMX, Radio Mexico International, at 9705 kHz. The host of the new program will be Yuri Bilbatua Ferrer, XE1NVX, a member of the board of directors of the Federacion Mexicana de Radio Experimentadores (FMRE), in charge of media relations.

Estacion DX will be retransmitted three times per week on various frequencies used by the station. Ideas and written contributions of general interest to radio amateurs and SWLs are welcome. Send them to Yuri Bilbatua, Box 21-300, 04021 Mexico City, DF, Mexico; e-mail nuvox@mexred.net.mx or at.

The program is expected to deal with a wide variety of SWL and ham radio topics, such as DXing, ham radio public service activities, antennas and space communication. Project sponsors are hoping the program will provide a way for ham radio clubs in Mexico and other Spanish-speaking countries to cooperate in promoting Amateur Radio.--Fred Laun, K3ZO

WORLD TELECOMMUNICATION DAY IS MAY 17

The International Telecommunication Union (ITU) Council has chosen "Telecommunication In The Service Of Humanitarian Assistance" as the theme for 1997 World Telecommunication Day (WTD-97), a theme lying at the very heart of Amateur Radio. World Telecommunication Day takes place each year on the anniversary of the creation of the ITU, May 17, 1865.

A specialized agency of the United Nations, the ITU has the vital role of overseeing the division of the range of radio spectrum for the entire world. Based on the demonstrated or perceived needs of different services, which include broadcast, maritime, aeronautical, amateur and others, member-nations of the ITU decide which radio services will be allocated which bands of frequencies. Once that's done, the regulators for each country take over to write domestic regulations in accordance with ITU international agreements.

Amateur Radio is expected to be featured in a special telecommunications center designed to commemorate the event, to be located in front of the ITU Headquarters building, at the Place des Nations, in Geneva, Switzerland. It is expected that special event station operators will use the call sign 4U1ITU, which is the call of the ITU Headquarters club station.

ARRL International Affairs Vice President and IARU Secretary Larry Price, W4RA, and Technical Relations Manager Paul Rinaldo, W4RI, will be in Geneva for other meetings and are planning to represent ARRL and IARU in person. It is further anticipated that ARRL will arrange a schedule with the Geneva special event station to convey a commemorative message from ARRL/IARU. (IARU is a Sector Member of the ITU. ARRL is the International Secretariat of the IARU). US groups involved in emergency communication programs such as ARES and RACES would also be invited to contact and exchange messages with the station.

Other planned activities and demonstrations in Geneva include live videoconferencing (possibly with relief workers at the site of operations in Rwanda and/or Burundi), satellite equipment (provided and operated by commercial suppliers), and VHF and HF mobile equipment. Videos, including a program currently in production on telecommunication in the Rwanda and Burundi operations, will be shown.

DENNIS E. MUNGHAM, VE3ASO, SK

Well-known VHF contester Dennis Mungham, VE3ASO, of Mountain, Ontario, Canada, died March 21, He was 48 and had been a ham for more than 35 years. Mungham was a member of the Toronto VHF Society and was considered a prime mover behind the VE3ONT contest group.--Peter Shilton, VE3AX

IN BRIEF:

* This weekend on the radio: CQ WW WPX phone contest; Low Power Sprint, CW. See page 98 of March QST for details.

* New ARRL/VEC fax number: The ARRL/VEC now has a fax number. It's 860-594-0339.

* RS-16 Update: While the RS-16 transponders apparently have not yet been switched on, the beacons on both 2 meters and 70 cm have been active. B. J. Arts, WT0N, reports that during a pass over North America on March 14, RS-16's 10-meter beacons at 29.408 and 29.451 MHz were not heard, while the 70-cm beacons at 435.504 and 435.548 MHz were active. The 435.504-MHz beacon was very strong, while the 435.548-MHz beacon was very weak. Once the transponder has been turned on, the uplink passband on 2 meters will be 145.915 to 145.948 MHz, and the downlink on 10 meters will be 29.415 to 29.448 MHz.--B.J. Arts, WT0N

* Alinco cuts prices again: For the second time in less than a year, Alinco has announced price reductions to dealers. The company cited the favorable dollar-yen exchange rate as one reason behind the price cuts. Alinco notes that it does not set prices at the dealer level, and that street prices can vary from one retailer to another.

* Pre-WW II YL information sought: Wolf Harranth, OE1WHC, honorary curator of the world's largest QSL collection in Vienna, Austria, says he's seeking information on female hams operating prior to 1939, as part of a research project into the history of Amateur Radio. "So far we have listed 350+ YLs operating before 1939," he reports. He said he now needs background information (biographical information, old and current QSLs, photographs, etc) on as many of them as possible. To help, contact Wolf Harranth, e-mail kwp@rai.ping.com.

* ScoutElmer Award: You don't have to be in Scouting to be the recipient of the ScoutElmer Award for helping Scouts to become hams. To qualify, you must be licensed and either be a past or present Scout or adult leader or know a currently active Scout or leader. ScoutElmers agree to respond to help answer ham radio questions from Scouts in their area for at least one month. To sign up, send e-mail to Mel Goldberg at myriad1@ix.netcom.com. Include your name and call sign, e-mail address; locations you can serve; mode(s) of communication, such as e-mail only, e-mail and telephone, telephone and ham class, etc; and your Scouting affiliation and position (past affiliation and date, if applicable), or your Scout or Scout leader sponsor. ScoutElmer Award recipients get a certificate, a Web site logo and the satisfaction that you helped promote Amateur Radio in Scouting. For more information, contact Mel Goldberg, KO6TF, via e-mail or visit the ScoutRadio Web site at http://www.ocbsa.org/troop319/ham.htm.

* 1997 AMSAT-NA conference last call for papers: The 1997 AMSAT-NA meeting and space symposium will be held October 17-19, 1997, at the Airport Delta Hotel, Toronto, Ontario Canada. Those wishing to present papers must forward their request and a title by April 1. Topics may include all relevant amateur satellite disciplines. Abstracts must be filed by June 1, and final versions by August 1 (so that they may be printed in the proceedings). Those not able to attend are encouraged to send papers for inclusion in the proceedings. Submissions should be sent to Wayne Chandler, VE3WHC, Box 6, Carlisle, ON L0R 1H0, Canada; e-mail, ve3whc@amsat.org.

* Improved WM7D call sign database: You can now search WM7D's fcc call sign database for clubs--by name, city, state, and/or ZIP Code. Check it out at http://www.rdatasys.com/~mdowning.--Mark Downing, WM7D

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter . For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs.

The HIRAM BBS: 860-594-0306.

The ARRL Technical Information Server (Info Server): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit".

CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries

The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

>to get your No-code Tech, set up a 2-meter station, then sit at the rig
>all day engaging anyone who'll answer you in banal conversation.

How exactly is this different than getting a General, setting up an
80m station, then sit at the rig all day engaging anyone who'll
anwer you in banal conversation?

Answer: it isn't.

> Good
>use of spectrum, this isn't. But when it comes time to actually DO
>something different, or someone suggests learning something new,
>the excuses start rolling in! When people do get into a leadership
>position, they immediately become power-hungry and start looking for
>ways to control people. Quite frankly, it's sickening!

Hey, have you ever tried working club leadership? It seems like most
folks think "the club" should do it all, but they're not willing
to help "the club" when asked. This is no excuse for the pathetic
power-mongering that goes on, but it does tend to explain why good
people refuse to sit in the hot-seat of leadership.

>>- Internecine fighting over nonsense such as the code/no code issue.
>
>Created by people demanding that our traditions and standards be lowered
>to meet the needs of pop-culture commercialization of our hobby/service.

I suppose the fighting is caused equally by people demanding that
existing standards be maintained without modernization.

>>- Failure to adapt to changing technology.
>
>Is the ARS about "changing" technology or understanding "basic"
>technology? Is it about "throughput" or is it about learning and
>understanding the essential basics of communication by radio?

Yes, it is.

>>- Failure to recruit young hams, and to accept and Elmer the ones who
>>do become licensed.
>
>I have absolutely nothing to motivate me to recruit more users of the
>2-meter band...we already have plenty. Whenever I try to interest a
>new ham in CW, Packet, RTTY, and upgrading his license, I am
>accused by my "moral superiors" of "having strong opinions." So
>why should I bother if my ideas are rejected out-of-hand because
>they require others to make a bit of an effort to better themselves?

You seem to really strongly believe that "higher class license = better
radio amateur". I believe you're seriously mistaken, and this "strong
opinion" of yours is probably at the root of why people reject your other
ideas out-of-hand.

Being a good radio amateur is entirely orthogonal to license class, and,
often times, experience. I'm even beginning to believe that being a
"Real Ham" is contrary to being a good radio amateur.

>>- Inability to cooperate with each other in things like packet nets.
>
>You have my sympathy there. I see packet radio as a good idea that
>never really got off the ground. However, a big problem is the unwillingness
>of most hams to make a significant financial investment in anything, even
>if it's for their own mutual benefit.

Oh, money is the problem? Really? I don't think so, at least not at
the first level. The willingness to cooperate really is the basis
for most of "what ails" amateur radio today.

>>- Failure to self-police our own members, which we have traditionally
>>done. Whining to the FCC is both futile and counterproductive ion
>>most cases.
>
>It's difficult to "police" something without the authority to take action
>against "offenders." If you become an Official Observer these days,
>they don't even want you to send "pink slips" to violators...they want
>you to send "attaboys" to good operators! The FCC simply doesn't
>have the resources to enforce it's own regulations, so we hams have
>to put up with chaos which will inevitably ruin our service. Talk about
>being caught between a rock and a hard place...

In twenty years of watching OO's at work, my opinion is that they're
generally more of a liability than an asset. I'm not trying to insult
the 90% (or more) of the OOs that really want to do something good,
I've just seen too many OOs with a very bad attitude generating seriously
negative will in the amateur community.

Who do you think invented (and are still inventing) the modern methods?
It is us "old farts" with the expertise, money, and spare time.

But you would not know about this would you?
A couple years is hardly time to have more than an itty-bitty clue
of what ham radio is all about. Buy a few more clues over the next
ten or twenty years, and then us "old farts" will begin to listen to
your opinions. At this point, you have not been around long enough
to have formed any valid opinions.

<flame off>

Hope to run across you on the air some time ... how about 20M CLOVER?
14.116.00 (LSB dial reading) Saturday morning perhaps?
If 20 isn't open, we can try 40M 7.087.00 (LSB dial reading).

How would one arrive at shear numbers? But before that, I wonder why hams would be subject to shearing? Shorn by whom? And why would shorn hams make apples rot?

Just out of curiosity, does WORLD RADIO publish an "April Fools" article as CQ deos every year? This certainly sounds like one of them.

6560. The WALTER BARSTOOL Show...an update!

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-27 00:00:00 UTC
From: mnmaniac@aol.com
Message-ID: <19970327185300.NAA24978@ladder01.news.aol.com>
Source record: 201653

Looks like old Walt was back on 75m last night. I missed it (aw, darn!),
but my mailbox is overflowing with QSL reports of Sir Walter's high-proof
performance!

>>>

Drew:

I happened to be tuning across 75 meters last night
(3/26/97) , and guess who was on the air?
You guessed it! Walter "Barstool" Mller - w2yee!
He was on 3.950 at 10:12 PM (11:12 PM EST/Fla your time)
and was rolling away, talking with the usual group of right
wing yahoos who normally congregrate there. I had to get
some sleep and shut off the SW8 at 1:45 AM. In true form,
Walter was"toasted" as usual, and slurring his speech big time!
This is significant Drew, as ole Walter follows a predictable
"schedule". He will dissappear for 2 weeks and then
re-appear on 14313, 14.300 or 3950, just as drunk as ever!

Tonight was the first I've heard him on since March 14, which
probably means that if he holds true to form, he will probably be
up and around on 14313 or 14300 tomorrow, and the next couple
of days! (daylight hours 14313 or 14300, then a switch to 3950 at night.)

Be advised Drew, that Mr. BarStool (w2yee) can go on for 18 HOURS
at a pop! I've actually heard him go on all night long with no breaks
on 3950, talking to himself and playing his airshotz German Marching
Music tapes. What's that...? You haven't heard his "music show"..??
When Walter thinks he's being jammed or ignored, he will play tapes
of old time Hitler Marches (!) Beer Hall Tunes (!!) and sometimes
classic old "negro" Blues Tunes from the 1920's & 30's (!!!)

Pay VERY close attention to 14.300/14313 during daylight and 3950 at
night Drew. Especially since it's a holiday weekend, Hale Bopp is in
the sky, and Walters whiskey bottle appears full again, and it's next to
his KILOWATT Linear. (...did I mention, he was a broadcast engineer
before he retired to become yet another senile old fool on ham radio?
He managed to get ahold of a BASEMENT FULL of broadcast equipment
which he uses on ham radio...you will hear it for yourself when he starts
playing his "music box" tapes. The guy *does* know how to put out a
quality signal, despite being a major big-time alcohol abuser...last week
he actually passed out (!!) on 14313 and left his transmitter keyed for an
hour)

Enjoy the show, and as usual, "mum's the word on here" Drew : `)

The 9 should work just fine. The trick is, the battery pack has its' own
built-in voltage regulator for the 6 AA-sized ni-cad cells. Yeah, if you
can feed it 9.5v, it'll work. And I have also plugged the car's DC straight
in. As long as the LED glows, it'll work.

>vhf.

The hams in Southern California will disagree with you. Also, you need to keep in mind that what you hear on V/UHF is just activity within a say, 50 mile radius; if, within that radius you have only law-abiding operators you can't project their favorable manners and falsely state that all V/UHF ops are well-behaved.

At the same time, because if you so much as sneeze on HF you could possibly be heard half-way around the world it's not fair to say:

>My conclusion is that the filter works,It keeps all the idiots on
>... hf .... As a "no-code" I
>listen regularly to 75/80 mtrs 40,20 etc.

...but then you go and say it. Bad boy. Now you're projecting the behavior of less than 1% of US hams to everyone on HF.

>If you can listen to that and tell me that code makes a more professional
>radio op then you have deeper problems than a code test.

You've errored again. You're pointing to law-breakers who make up less than 1% of the amateur community and projecting their behavior onto the rest of us. Why not tune down to where code is being used and tell us what you hear? (Of course, folks like Jerry and Gary will hear a few bad code operators who make up less than say, 0.001% of all code ops and then go on to project that bad behavior onto all code ops [but they too will speak against code and code ops at any possible opportunity].)

That there are law-breakers and riff-raff on HF just goes to show that even criminals can learn the code.

I AM LOOKING FOR INFORMATION ON THE BAYCOM SOFTWARE THAT IS INCLUDED WITH THE RAMSEY P-IBM MODEM FOR PACKET RADIO. I RECENTLY BUILT ONE OF THESE MODEMS AND AM TRYING TO GET THE SOFTWARE TO WORK. THE INFORMATION INCLUDED WITH THE PACKAGE FOR THE SOFT WARE IS VERY SKIMPY AND I HAVE RUN INTO PROBLEMS. I CHANGED THE CALL IN THE <MYCALL> AREA OF THE SOFTWARE AND BY CONNECTING THE AUDIO IN THE THE MODEM TO MY SCANNER AND THE MIKE INPUT TO THE MODEM TO MY RADIO SHACK 2M HANDY TALKIE I WAS ABLE TO CONNECT TO MYSELF. WHEN I HAD A FRIEND TRY TO CONNECT TO ME OR ME CONNECT TO HIM THE SOFTWARE SEEMED NOT TO RECONIZE MY CALL. I COULD SEE HIM TALKING AT THE BOTTOM OF THE SCREEN WHERE I SHOULD SEE ALL TRAFIC BUT THE SOFTWARE WOULD NOT MAKE A CONNECTION TO HIM. WHEN I TRYED TO CONNECT TO HIM HIS MACHINE WOULD SEE ME AND CONNECT BUT MY MACHINE WOULD NOT CONNECT TO HIM.

>questions.

Ah Ha! So here it is, the definitive definition of a LID from MD: someone
who can copy 10 words per minute, but not 13. Evidently only the guys who
can copy the full 13 or better are not LIDs, isn't that right?

>Change the code tests to 1 minute solid copy, with no multiple choice or
>fill-in-the-blank 7 of 10 quiz afterwards, and your upgrade rate will drop
>significantly.

Now there's a good point. How 'bout making it an hour of solid copy!
That would REALLY cut back on the upgrade rate. Prolly keep almost all
the LIDs out then Michael!

They already did Drew. In 1970 at the age of thirteen, I sent them a letter asking if they could come up with an altenative way for younger Hams to take the tests instead of going before an FCC official in a town that was over a hundred miles from home. I also ask them if it were possible to do away with having to draw circut diagrams from memory. Told them that the code test was just fine at one minute solid copy. That was after I passed my general class. Looks like they more then listened to me. Maybe it has to do with how and what you ask for.

>airport 50 miles away causing interference with local traffic calls.

The idea of sticking with AM for aircraft comms is that the listener (usually a controller) will be able to tell that there was a second transmitter on or near the frequency, instead of having capture effect totally wipe out the weaker transmission. This especially applies when you might have a much weaker transmitter on the same frequency.

The answer above covers most of it: Band plans. The second reason is that
several manufacturers make one unit to sell in many countries. Many non-US
amateurs do not have the same frequency privledges that US hams do.

And, Steve is right. There are always alternatives. Buy a Yeasu. They
all go 430-450. Even the handhelds.

Selling Icom IC-P4AT 440MHz handheld package.

In case you may not be familiar with this tiny little
handheld, I'll list it's features...

Like I said, It's tiny, measuring:

BP-111 Little (stock) battery 1.25" X 2" X 4" (Approx)
BP-113 Long life battery 1.25" X 2" X 5.75" (Approx)

Features:
100 Memories
5W Output at 13.8vDC
UT-50 CTCSS Encoder Board
LC-91 and LC-93 Vinyl Cases
OPC-254 Cigarette Lighter Cord with Plug
BP-111 7.2vDC 400mAh small battery
BP-113 7.2vDC 1200 mAh extended battery.
Smiley Antenna Set (1 Tall, gain and 1 'stubby duck')
RadioShack Speaker-mic
Original Box and Manual.

The rig is 2 years old, and in excellent condition.
I'm asking $200 for the whole package!

If you are interested please e-mail me, or visit
my web page at http://members.aol.com/unitedsnd2

I'm selling some pro audio and video gear as well...

Also for sale is a Radio Shack Frequency counter for $70

Thanks,

Steve White
United Sound

6576. MLM for Long Distance, Free Calling Cards, 800 and 888 Service

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-27 00:00:00 UTC
From: MLM@OpportunityOnline.C0M
Message-ID: <1994522570669.2485.7@gile.com>

New exciting marketing plan for long distance for home or office.
10.2 cents/min off peak, 12.5 cents/min peak (8:00am-5:00PM/M-F) Interstate.
No Activation Fees, No Access Charges, No Monthly Fees, No Minimums, No
Clubs to join.

Billed in 6 second increments. $5.00 per line credit for line switching.
Savings on International Calls up to 60%. Even more to your preferred
International Area. Examples: Canada $.21/Min, England $.24/Min, France
$.30/min.

Free calling cards billed monthly after usage at 17.5 cents per minute.
No Access Charges, No Surcharges, No Pre-payments, Use from any touch tone phone
PIN # is your home phone plus 4 digits. Easy to remember.

Toll Free 800/888 service billed at 10.2 cents per minute off peak, 13.5
cents/min peak, state to state in 6 second increments. No Activation Fees,
No Monthly Fees, No Minimums, No Term Contracts to sign. 800/888 numbers
ring to your present phone. No need for new 800/888 number. Can transfer
your present 800/888 number in most cases.

All services provided by American Travel Network through LDDS/Witel (U.S.
4th largest long distaance carrier)

Sponsoring dealer commissions paid through 3 levels (5%, 1% and 1%).
Sponsoring dealer total cost is $69.95, includes all materials and flyers
to get started, including dealer support.

For more info, an Application and Contract, or just to receive the long
distance, free calling card, or the 800 or 888 service. E-mail me your name
and address at jamesf@envisionet.net

Hey, it looks to me like you got caught claiming something that was not true: i.e. the crossbow thing. FWIW, I NEVER heard of the US Army using this particular weapon. I served long enough so that I'm pretty sure I would have.

Something else I saw very little or none of in the Army was the use of Morse Code. It was not used by any branch of the Army for communications, although the Military Intelligence branch did train a small group of people to monitor code, since certain other less-developed nations' armies did use code. But our army did not use it much, if at all.

Make all the personal swipes you like, but that is the way it was in the 70s. Code is even less used now than back then. Kind of like smoke signals.

Here's the deal, let's do what the Russians do. Demonstrate
technical proficency by building and....using a CW rig for a
certain period of time. Then still...have to take a code and
theory test. Next, if you want to use voice, build a phone
rig and take yet another test. That sounds like a much better
alternative than the structure we have in the states.
BTW, has anyone work a Russian staion lately, they
are pretty good operators! I bet they would give
thier left nut to get a license as easily as American hams can.

Do I like to do things the hard way? Ofcourse not. But I am
proud of the fact that instead of laying on the floor crying
and pounding my fists, I just did what I had to do to upgrade.
Was it easy? No.

I suspect that sooner or later, Drew from Sunny Central Florida
will cut his hair, plan for his retirement, and vote Republican,
as soon as he reaches puberty.

Apologies. The last 's' was meant to be a plural suffix and should not have been upper case.

Well, if Wayne were to be believed, you must be either deluded, hoodwinked or a liar!

I find this so sad. There are people still alive today who were intimately involved in the Moon landings. There are people still alive today who watched the launch of the Saturn V rockets. There are Hams still alive today who listened in on the spacecraft and instrument communications. Today, at MacDonald Observatory in Texas, regular laser range measurements of the Moon are done. These would not be possible without the retroreflectors left there. How can Wayne, with a straight face and a right mind, question it?

In my opinion, 73 Magazine was quite good. But recently, it has been deteriorating. In the latest issue (the one indicating that there might be an alien spacecraft shadowing Hale-Bopp), there is a construction article on a device that makes colloidal silver solutions (for washing, drinking and the like). The claim is that it's good for you. Aside from the somewhat pathological nature of the science therein, it doesn't have much to do with Ham radio (to my knowledge!).

Oh well.

Hank ... I think he means "Olde Fartz" in terms of *attitude* not
age ... for example, I'm 46 but I'm not an olde farte ... but I know
people in their 20's who *are* because their thinking is stagnant
and they are so rigid in their demands that everyone adhere to
backward methods.

I also hav known hams in their 80's whi were not olde fartz ...
very open-minded and ready to learn and try new things.

>Carl - wa6vse
>carl@ais.net

Morse is not mandatory. We have made Ham Radio accessable to the multitudes at an "entry level" that does not require learning/testing of Morse code. An individual has the option of staying at that "entry level" for as long as they desire, or acquiring the needed skills and educational requirements to progress to additional levels. No one is being forced into anything. The level of license attainment is up to the individual. Not long ago the "entry level" was the Novice license. That license required Morse at a speed of 5 WPM and had a term of one year, non-renewable. It forced the individual to upgrade or leave the ARS. Today's requirement consists of a few "multiple guess" questions, no Morse, and no term limit. It couldn't be much easier, as you put it "in today's technicial environment". While Morse may not be as efficient as some of todays digital modes, it is far more spectrum efficient than SSB, AM, and FM. It also has the advantage of being able to be decoded without the use of computers, modulators/demodulators, TNC's, etc.. I feel that the ARS should

promote furthering the knowledge and abilities of all the available modes from AM to Spread Spectrum. Whether or not the individual chooses to use and participate with each of the modes is once again, up to the individual.

6588. the code/nocode debate, why??

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-28 00:00:00 UTC
From: lar01@sprynet.com
Message-ID: <333c2bc0.12824140@news.sprynet.com>
Source record: 201583

I realise that there are lots of amateur very concerned about the possibility of the dropping of the necessity of needing the morse code to operate below 30 mhz.
I have been hearing the contriversay since the late 60's.
Unfortunately, this 'debate' is having a serious negative effect on how non amateurs view our hobby. Many are now seeing us as a group more interested in debating the value of the morse code rather than the value of the future of amateur radio, as a whole.
For example, more amateurs are agruing the cw merits than are trying to push this hobby forward. What percentage of amateurs, who are on 2 meter fm voice, concerning adding another mode to their capability?
The commercial concerns are licking their lips over our overconcern about the morse code and our, seemingly, lack of interest in our exploration of other modes to show the need and value to keeping our vhf, and higher, frequencies.
I realise that cw does have its merrits, I am not arguing that, but come on fellas, and ladies, lets get on with amateur radio development, and our future.
p.s. I am against the dropping of cw for hf entry. It does have its place and the last several years of our progression has proven, to me, its importance.

6590. Motorolla Visar Problem

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-28 00:00:00 UTC
From: Michael Sharpe <michaels@nbnet.nb.ca>
Message-ID: <333C61F8.83D@nbnet.nb.ca>
Source record: 201585

Greetings
Anybody have any thoughts or idea!!!
Recently I have installed a repeater system consisting of the following eqpt.
1 Zetron 48 max repeater controller with two line interconnect 150 user capable.
1 Motorolla Desktrac repeater.
17 Motorolla Visar Portable radios 16 channel.
The general operation is programmed in the 48 max as 8 user groups TPL tones starting at 67.0. The system operates very well as a general radio to radio communications system. The problem arrises when a user makes or receives an interconnect call (via telco phones lines) Intermittent clipping of the rec audio is noticed on the portable radios at indetermined times. I have monitored the repeater carrier at the times that the clipping was experienced on the Motorolla Visars and the tx audio 3kc (I turned it down from 4.5kc) was clean no interruption in fact with a Motorolla GP300 radio sitting right beside the Visar, does not display any problems whatever. In running some tests on the Visars I subjected them to modulation of 15kc 1kc tone and also ran the frequency up to 5kc before the audio cut. Which in my view is excellent especially since the audio band on any voice channel drops off at 3500. When we purchaced this system we went out of our way to buy what we thought was the best most reliable eqpt. we could purchase and really liked the small size of the Visars. I have heard that there was problems with the Visars and in calls to Motorolla was told one time that the problem I was having was called microphonics! and there was a mod I could purchase to eliminate it. Knowing that mircophonice cannot even remotley describe the problem I'm experiencing I called Motorolla again and was told that yes microphonics was not the problem but they have no reports of problems like the one I've described. I'm not sure if this is the right form to present my problem but I am getting nowhere with Motorolla and was wondering if anybody has any Ideas, experienced similar problems, any helpfull suggestions (short of biffing the Visars in the drink) that could help me in finding a solution.

It's fine that you used CW, if that's what you like. However, you
could have just as well (or IMHO, much better) used packet, RTTY,
AMTOR, etc. to communicate without using your voice during that
period.

It simply doesn't make mandatory Morse learning/testing necessary
or justifiable in today's technical environment.

Hi Fellow Hams....I'm Marshall Applewhite of Ranch Santa Fe, California, WB6NUT.......

Like many of you, I had trouble getting past that 13wpm "barrier" on the way to my Extra ticket. Those pesky GordenWest tapes were not getting the job done!!

Now, as an exclusive offer, Heaven's Gate Computer Products is proud to offer our new code practice program that is guaranteed to send your code speed right into outer space !!! Yes, just a few weeks of instruction and we can have you leaving your containers for the wonderful world of 100wpm CW....QSO with your friends on other planets.....tear 'em up on the War Zone...send just like RTTY...

Our exclusive in home program provides you with a computer, bunk beds, Nike athletic shows and a purple shroud to keep out that annoying light. For a limited time, we also include a special low-calorie diet that is guaranteed to boost that untapped "brain power", and get that speed up !!!

So don't delay......!!!! send a cashiers check to Heaven's Gate Computer Products, P.O. Box 73, Rancho Santa Fe, CA. 92680....Price ?? ...only $29.95 !!!........act now, as we are going on a short voyage in the near future....

6594. Re: Code is a bridge between languages. CW isn't the problem with HR.

Gary Hosler <grhosler1@mmm.com> wrote in article
<5hh4cp$on8@dawn.mmm.com>...
>
> Morse is not mandatory.

It is for HF access ... and the biggest rub is that the majority
of privs you get for higher Morse copy speed are *totally*
unrelated to the "skill" tested.

> We have made Ham Radio accessable to the
> multitudes at an "entry level" that does not require learning/testing
> of Morse code.

How benevolent of "you" ...

[snipped som "work ethic" stuff oriented towards the concept
that a wide variety of license classes is "a good thing" ... I
disagree ... the current caste system is a "very bad thing"]

> While
> Morse may not be as efficient as some of todays digital modes, it is
> far more spectrum efficient than SSB, AM, and FM.

Correction, it's *narrower* ... that doesn't make it more efficient.
I can convey far more information with far greater clarity and
more universal understandability using SSB voice ... I can do better
yet, using some of the more advanced (for hams, that is) digital
modes.

CW is not that spectrally efficient.

> It also has the
> advantage of being able to be decoded without the use of computers,
> modulators/demodulators, TNC's, etc..

Most of us more technically inclined folks fail to see the "advantage"
you tout in the above clip ... we recognize that we can build machines
that can implement far more efficient modems than we can ever possibly
hope to emulate in "wetware." And they're more reliable and cost less in
terms of human capital, too.

> I feel that the ARS should
> promote furthering the knowledge and abilities of all the available
> modes from AM to Spread Spectrum. Whether or not the individual
> chooses to use and participate with each of the modes is once again,
> up to the individual.

>
> Gary

Perpetuating the use of 150 year old technology by demanding
that everyone be forced to learn it in order to gain access to
"the good stuff" is extremely counter-productive strategy for
a community that's aging and in jepoardy of losing its' "leasehold"
on its' "home" (our bands).

Maybe not in terms of all modes available to amateurs, no, it isn't.
However, in terms of the most popular modes that amateurs use (FM,
SSB, CW) it certainly is.

>That's all many of us are trying to promote. If the Morse ops want

I like the idea of mode-based testing. You want CW, take a CW test.
You want SSB, take a SSB test. And so on. Unfortunately the no-code
contingent consistantly calls this "too complicated". Their ultimate
goal is no-code, no-theory. The ultimate in uncomplicated licensing.

My website has a free download of Amateur logging
software - and alot of other computer related programs too ! The
database is in full color, has logging, QSL functions, access
QRZ! cd-rom, search DX prefixes, ten minute timer, colorful
world maps with call prefixes for reference, awards tracking,
screen savers, English/Metric conversions and much more !

You can find it at http://www.esdi.com/log-it

There is also a bulletin board for Amateur Radio related stuff.
You can use it for messsages, sell/trade/buy, computer problems,
track DX and all kinds of things !

The site has a chat service for maintaining contact when the bands are
down and other times too !

Take a look ! Thanks .... Jim

I'm running a contest that gives away free logging software !
The website has lots of other neat stuff too ! Like links,
shareware downloads, etc. Thought you'd like to know.

Go to : http://www.esdi.com/log-it

There is also a bulletin board where you can post messages,
buy/sell/trade equipment, get help with your computer problems, locate
software/hardware, keep track of DX operations and post notices
regarding good DX on the air or just keep track of old friends.

Try the CHAT SHACK while you are there. Get some friends together
and keep in touch when the bands are down or anytime !

Take a look ! Thanks ... Jim

6600. A couple of questions on VHF/UHF

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-28 00:00:00 UTC
From: Michael Daly <mikedaly@interlog.com>
Message-ID: <333C63EA.6C53@interlog.com>
Source record: 201595

I've undertaken the task of getting a couple of handheld radios for my ski club. Their primary use is for our ski patrollers; a lot of local ski centres don't have the funds to supply enough radios for all the patrollers on duty and our patrollers don't want to deal with emergencies without radios.

The Canadian Ski Patrol (CSP) manual states that they use 148-174 MHz and 450-470 MHz. Considering VHF only, most of the HTs I've looked at operate in the 144-148 MHz range. Only a couple are available with the higher frequencies. One dealer told me we have to get a letter from the CSP authorizing us to use their frequencies before he'd lease (not sell) us a unit. Are these higher frequencies subject to different regulations or licensing requirements?

The only HT I've found so far that seems to meet our requirements (above frequency range, 5 watt output) is the Motorola HT 1000. It's quite pricy (out of our budget actually even on a lease); are there other brands/models that would be good?

In general, I've been wondering about the nature of licensing of radio frequencies. It seems that the frequencies for VHF and UHF that only require a mail-in license overlap those frequencies used for ham radio with its written exam requirements. What is the difference?

Is there a book, faq or web site that covers the different frequencies and who can use them with a given license? Is it safe to assume that regulations in Canada and the US are sufficiently similar that knowledge of one gives a good indication of the other?

6601. HF Mobile Noise

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-28 00:00:00 UTC
From: Bo Henderson <bo@physitron.com>
Message-ID: <333C26A7.7C3C@physitron.com>
Source record: 201596

I have a serious noise problem (S-7) with a TS-50 in a 1992 JEEP Wrangler on 20 meters. The noise blanker decreases the noise by 2 to 3 S-units. The signal is coming thru the antenna and goes away when the engine is turned off or the antenna is removed. I can hear the fuel pump when it comes on and have attempted to filter that. I also perceive that something else is contributing to the noise such as the engine fuel injection control computer. I can hear the spark plug noise but it is very weak compared to the electrical noise I am hearing.

SO FAR

I have bypassed the 3 leads going to the fuel pump to ground thru .01 micro-farad capacitors about 2 feet from the fuel pumped. It is difficult to get any closer to the pump without major disassembly. This seemed to help but not eliminate the problem. I then installed 3 ea. 100 micro-henry inductors in these same leads adjacent to the capacitors. One inductor was installed in each lead. I assumed that between these two filters that I would eliminate the signal or drive it far enough up in frequency to move it out of the HAM bands.

I still have S-7 noise on 20 meters and S-5 on 17 meters and S-3 on 15 meters. Has anyone else had this problem?? Does anyone have any ideas?? Are there other things I can do to decrease the fuel pump radiated RF?? What should I do to bring down the computer noise??

I would appreciate any ideas which you may have. REgards Bo

Here is a summary of news items covered on edition #209 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week including April Fools' Day:
-
1. Phase 3-D Launch Delayed Again, May Add $100,000 to Cost
2. P3D Battery Charge Regulators Delivered from Hungary, Installed
3. STS-83 Scheduled to Launch Thursday with SAREX and Three Hams
4. New 10 GHz EME Record Set Between Germany and New Zealand
5. ARRL Northern NJ Section Manager to Step Down Before Term Ends
6. Special Event Station Calendar
7. RS-16 Beacons Heard on 70 cm, Transponders Still Not Turned On
8. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
9. "Newsline" Reports "Opposite Sideband Night" Contest
10. FCC Delays Implementation of Computer Use Fees for Amateurs
11. TV Industry and FCC Closer in HDTV Implementation Negotiations
12. ATV Rocket Launches Set for May
13. "Rockoon" Launch Delayed Due to RFI Problems
14. "This Week" Seeking Special Feature Producers/Commentators
15. "The RAIN Dial-up" from Chicago
16. Weekly Propagation Forecast
-
Funding for the program's transmission and production expense was
provided this week by a grant from John Glass, NU6P, of Saratoga,
California, where "This Week in Amateur Radio" is heard Saturdays
at 6:00 PM on the NU6P repeater, on 224.80 MHz, serving Saratoga,
San Jose, Santa Clara, and Sunnyvale.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EST) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier. On the Internet,
audio is available each Sunday in 8-bit .WAV file format, sampled at
11.025 kHz, at http://www.intrlink.com/~sparky/wb4qoj/wb4qoj.htm
```

through the courtesy of the Blue Ridge Video and Digital Society of Roanoke, VA. A separate "RealAudio" file is also available at this site. The service is carried on VHF/UHF repeaters throughout North America and on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

-

Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.NY.USA.NA via amateur packet.

6603. Len reveals the truth was: more QST absurdity

>

Well THANK YOU Len!!! Now we can put to rest once and for all the tired old argument that amateurs are bound to advance the STATE of the ART. According to Len, the only State of the ART employed by amateurs seems to be what is incorporated in their store bought equipment. Seems some changes in what constitutes the ARS are long overdue.

>
> Interesting that "time in grade" must apply so strongly. Does clue
> content cover actual observation (say, for a period five years longer
> than yourself) and third-party participation or does clue content
> gather itself automatically on the grant of a license?

Seems to apply to people like Carl and even the poster himself, at times. The boring, nay repetitive and boring " I've been doing this for XX years, and know more than all amateur operators put together...yada yada yada, BORING BORING BORING.

>
> "Validity" of opinions seems to be judged on major participation in
> HF bands and modes and the seniority in same. Serious elitism that.

Validity of opinion seems to be judged on technical knowledge in matters radio and seniority in same. Serious elitism that.

> Amateur radio can be many things to many people...it is not dictated
> solely by time-in-grade operating HF, working DX, working OOK CW, or
> participation in contesting. [that's a free clue] However, to read
> QST, it would seem that ham radio is all about operating HF, working
> DX, working OOK CW, and participation in contesting. Anything done
> at bands above HF is just an afterthought, filler material added in
> by editors to show a "complete picture" when the content is just
> filler. Observable in all editions over the last 30 years.

Then don;t read QST. If you want technical adaptation information, read something else. To state the above as anything but the obvious deserves

a big Hollywood type DUHHHHHH

>
> I would be interested to know the modern methods INVENTED by the olde
> fahrtz which are used in amateur radio equipment, modes, antennas,
> whatever. Note: Adaptation is not invention.

Me too. Maybe Carl and the rest of the technical elite can fill all us
in.

AGAIN !!! WAY TO GO LEN!!! Oviously the so called charter of the ARS
should delete that part concerning technical knowledge and STATE of the
ART!!!

Message-ID: <333C19B1.1A35@netway1.netway.com>
Source record: 201599

If you consider Wayne Green's commentary vis a vis the QST commentary on the proposed rule changes what's the difference? One's at least - in the extreme - plausible while the other is arbitrary. Then you can always compare Wayne with the idiots on HF who bellow out curses and drunken monologs. Wayne by comparison is just another voice running on empty.

I like 73 for the HAM RADIO FUN articles by Peter Stark K2OAW - it'd be a great book for introduction if he'd compile it into a book.

General Disclaimer (to all) -
You are much smarter than me. I have lived in a cave for the last 6 months. Be nice and I'll up your VISA limit to $50K for 2 months. Get nasty and you are dead meat.

I don't know that it is a question of better or not. I'm usually
interested in busting "Morse Myth" (tm) that seem to be promoted here
on a regular basis. Unfortunately due to tradition, outdated
training material, and a bias in the licensing system, amateurs
are led to believe that manual OOK Morse Code is the "be all, end all"
with respect to reliability, weak signal performance, simplicity,
etc. That most of the that is either untrue or of little consequence,
matters not a whit to those trying to maintain the status quo.

> Feeling defensive? Thinking "I don't care what other people think?"
>
> Really? Then let other people use CW or digital, or whatever they want.

That's all many of us are trying to promote. If the Morse ops want
to use and require Morse proficiency, then let them have it in their
exclusive bands. On the other hand, let those that wish to use
other modes also do likewise without bowing to the Morse God.

> Like a bunch of spoiled children,

Who's "spoiled"? Those that are "with" or those that are "without"?

HA>to have formed any valid opinions.

Interesting that "time in grade" must apply so strongly. Does clue
content cover actual observation (say, for a period five years longer
than yourself) and third-party participation or does clue content
gather itself automatically on the grant of a license?

"Validity" of opinions seems to be judged on major participation in
HF bands and modes and the seniority in same. Serious elitism that.
Amateur radio can be many things to many people...it is not dictated
solely by time-in-grade operating HF, working DX, working OOK CW, or
participation in contesting. [that's a free clue] However, to read
QST, it would seem that ham radio is all about operating HF, working
DX, working OOK CW, and participation in contesting. Anything done
at bands above HF is just an afterthought, filler material added in

by editors to show a "complete picture" when the content is just filler. Observable in all editions over the last 30 years.

I would be interested to know the modern methods INVENTED by the olde fahrtz which are used in amateur radio equipment, modes, antennas, whatever. Note: Adaptation is not invention.

"OH Danny Boy thinks a crank's a toy
Especially when it attached to a guy name Roy."

OFF THE LOW BAND? I knew there was a reason they call 'em "LOW BANDS" -
Danny The Roy Toy hangs there!

PISSY LOW CLASS ADVANCED.....N6GNQ/JOHN
(Danny was on the "low bands" before he could spell LICENSE!)

DIVSIONAL NEWS

The Annual Report, ballots papers and other materials for members to participate in the Council elections and AGM, were posted out early in the week. If any member has not received these materials, pleas advise the Divisional Office as soon as possible.

WICEN NEWS

Don't forget that renewals are due at the end of March; if you have not paid up by then (a mere $10) then you will be unfinancial. Naturally, you can pay for several years in advance.

On 13th April is the Forster Triathlon. This is an all-day event, early morning to late evening, and about 25 operators are required for this event; food, drink, fuel and T-shirt are provided. Operators will need to bring equipment for 2m and 70cm voice, and will also need to contact Steve Pettet VK2KXQ, phone number (065) 55-3177, or PO Box 122 Forster, for further details. Following this is the Watagan Mountains Car Rally, over the weekend of 19-20th April, for which David VK2UDT is the contact; around 20 people are required for this exercise. This is followed by an Emergency Management course, at Hornsby RSL Club on 21st and 22nd April (this is not a weekend); please contact Barry VK2AAB for further details.

Events further away include the Bridge to Bridge Speedboat Classic, run by David VK2KLX, on 4th May; the Hawkesbury Emergency Expo, will be run by Kevin VK2CKD, over 16th-18th May; another Emergency Management course will be held at the Terry Hills Emergency Centre on the weekend of 17-18th May, for which Barry VK2AAB is the contact; the Tom Quilty Horse Enduro will be run by the eponymous Dan VK2GG on the 7th June; the Colo 24-hour Horse Enduro, is run by Alan VK2YYJ, on 12th July, and the Oberon Car Rally, also run by Alan, is on the 11th October; the Hawkesbury Classic Paddle is organised by Kevin VK2CKD over 18th-19th October and the annual Bungonia Cave Rescue will be on the weekend following, over 25th-26th October, with either Dave VK2KFU or Mark VK2XGK in charge.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St

Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If any region has any news or info they would like published, then please contact the Publicity Officer. If further information about WICEN (NSW) is required, please contact the State Coordinator, Alan VK2YYJ, on 015-097-217.

WICEN (NSW) has a Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". It is generously provided by the Macquarie University School of Mathematics Physics Computing and Electronics, and contains pointers to many emergency-related pages likely to be of interest.

SPACE NEWS

The European Space Agency (ESA) announced March 24, that the Ariane 502 which will carry Phase 3D aloft from Kourou, French Guyana, has been rescheduled for a mid-September launch. ESA said the schedule change was in response to recommendations of a board of inquiry that looked into the causes for the failure of the Ariane 501 launch last year. AMSAT-NA President Bill Tynan, W3XO, said that he believed the delay would add ''on the order of 100,000 dollars'' to Phase 3D's cost. That's on top of an estimated 200,000 dollars combined funding shortfall that AMSAT-NA and AMSAT-DL were reporting in late February. So far, AMSAT-DL has invested nearly 2 million dollars in Phase 3D, compared to nearly 1.4 million dollars for AMSAT-NA.

Phase 3D fund-raising efforts will continue. Earlier this year, the Japanese AMSAT group, JAMSAT, helped bridge the funding gap by transferring 50,000 dollars to AMSAT-NA. The money represented excess donations from JAMSAT members for the Phase 3D SCOPE camera. The completed SCOPE camera, designed and built entirely by JAMSAT, has been installed and successfully powered up at the Phase 3D Integration Laboratory in Orlando, Florida, where preparation and testing continue. A series of pictures of Phase 3D work in progress is available via the AMSAT-NA Web site at http://www.amsat.org. Depending on its workload, the integration team hopes to be able to update these photos as work progresses.

FISHER'S GHOST AMATEUR RADIO CLUB

There will be no Sunday Classes on Easter Sunday or on the 6th April due to the public holiday and the Campbelltown Show.

There will be no project night on Monday 31st March due to the public holiday.

Monday 7th April will be the last project night. The club would like to thank Jack VK2DVH for the work he put into these nights.

--Chris Newton VK2ZCJ

HORNSBY & DISTRICT ARC.

The next mid- monthly meeting, is on Tuesday, 8th. April 1997. At 8:00 pm. In the Mount Colah Community Centre, Pierre Close, Mount Colah. (Located near the Eastern Entrance to the Railway Station.) This is the Clubs informal get-together, to discuss any technical problems, that has arisen, with our equipment. There will be a demonstration on the correct procedure, for using the Gateways, on Packet Radio, by Mike VK2MJ, it will he demonstrated, on two computers connected together, thus preventing the emission of unnecessary RF. to the airwaves. Visitors are most welcome.

Training classes, are held each Thursday, evening at 7:15 pm, in a hall at the corner of Paimerston Rd. & Burdett St., opposite the Hornsby Hospital, for more information phone, Tony VK2BTL on 9487 3383.

The Club conducts, a net every Monday night at 8:00pm. on VK2RNS.

The frequency is 147.250 with a positive offset. Feel free to join in. All are welcome. Listeners set your scanner to 147.250. Remember, we would like to hear from you, or better still we would like to see you at one of our meetings. Visitors are most welcome.

Should you wish to know more about the Club, or its activities, please write to .. H.A.D.A.R.C. at Post Box 362, Hornsby, 2077. or contact the Publicity Officer, John on 9807 2490.

--Submitted by John W Turner VK2WRT-Publicity Officer.

The BLUE MOUNTAINS AMATEUR RADIO CLUB INCORPORATED,
WOULD LIKE TO ADVISE ALL LISTENERS THAT THE CLUB MEETS
ON THE FIRST FRIDAY OF EACH MONTH (EXCEPT JANUARY) AT
THE SPRINGWOOD HIGH SCHOOL LOCATLED ON GROSE ROAD
FAULCONBRIDGE.

DIRECTIONS TO THE VENUE CAN USUALLY BE OBTAINED BY
GIVING A CALL ON THE CLUB 2 METRE REPEATER ON 147.050 MHZ
(+600 OFFSET).

THE MEETING STARTS AT 8.00 PM.

THE NEXT MEETING, TO BE HELD ON FRIDAY THE 4th OF APRIL,
WILL SEE PHIL DERBYSHIRE VK2GPB TALK ON LIGHTNING AND
STEPS THAT CAN BE TAKEN TO MINIMISE ITS EFFECTS.

THE USUALL TEA, COFFEE AND SCONES WILL BE SERVED DURING
THE COURSE OF THE MEETING.

AND DON'T FORGET THE SECOND FRIDAY OF EVERY MONTH IS
THE BMARC FOX HUNT, OR SHOULD THAT BE HIDDEN
TRANSMITTER HUNT.

THE NEXT HUNT WILL BE ON FRIDAY THE 11TH OF APRIL.
HOUNDS + SNIFFERS MUST BE READY TO DEPART PROM THE
INTERSECTION OF GROSE RD AND CHAPMAN PARADE
FAULCONBRIDGE AT 8.00 PM.

FOR MORE INFORMATION AND DIRECTIONS GRAB A PEN AND
PAPER AND JOT DOWN THE FOLLOWING PHONE NUMBERS;

ADRIAN VK2BFN ON 015 108 504
KEVIN VK2MNU ON 0417 242 726
ALAN VK2YYJ ON 015 097 217

ALTERNATIVELY, YOU COULD COME UP ON THE WEEKLY CLUB 2
METRE NET HELD EVERY WEDNESDAY AT 8.00 PM ON THE CLUB
REPEATER FOUND ON 147.050 MHZ.

IF YOU HAVE NOT PARTICIPATED IN A HIDDEN TRANSMITTER
HUNT BEFORE AND WOULD LIKE TO FIND OUT WHAT EQUIPMENT
IS INVOLVED PLEASE CONTACT ANY OF THE PEOPLE PREVIOUSLY
MENTIONED. THEIR NAMES AND PHONE NUMBERS WILL BE
REPEATED SHORTLY.

BASICALLY, ALL YOU NEED TO GET STARTED IS A 2 METRE RADIO
PREFERABLY WITH AN S METER, A SMALL DIRECTIONAL
ANTENNA, USUALLY A 2 OR 3 ELEMENT YAGI AND AN
ATTENUATOR.

THE CLUB DOES HAVE INFORMATION ON BUILDING YOUR OWN
EQUIPMENT THAT IT IS HAPPY TO SEND TO INTERESTED PEOPLE.
REMEMBER YOU DO NOT NEED A RADIO LICENSE TO PARTICIPATE
IN THE HUNT SO WHY NOT USE THESE EVENTS TO INTRODUCE
NEW COMMERS TO THIS GREAT HOBBY OF OURS.

THOSE PHONE NUMBERS AGAIN ARE:

ADRIAN VK2BFN ON 015 108 504
KEVIN VK2MNU ON 0417 242 726
ALAN VK2YYJ ON 015 097 217

ALTERNATELY, YOU COULD SEND A STAMPED, SELF ADDRESSED
A4 ENVELOPE TO

THE FOX HUNT CO-ORDINATOR
BLUE MOUNTAINS AMATEUR RADIO CLUB
PO BOX 54 SPRINGWOOD 2777

AND WE WILL SEND YOU SOME INFORMATION.

AS WELL AS THE USUAL EVENING MOBILE FOX HUNT HELD ON
THE SECOND FRIDAY OF EACH MONTH, WE WILL BE CONDUCTING
A SATURDAY AFTERNOON HUNT TO BE HELD ON THE 19TH OF
APRIL AT 2.00 PM. MORE DETAILS WILL BE ADVISED AT A LATER
DATE, SO STAY TUNED.

--ALAN WHITMORE VK2YYJ, PUBLICITY OFFICER, BLUE MOUNTAINS AMATEUR RADIO CLUB

AUSTRALIAN AMATEUR TELEVISION CLUB

to the public holiday and the Campbelltown Show.

There will be no project night on Monday 31st March due to the public holiday.

Monday 7th April will be the last project night. The club would like to thank
Jack VK2DVH for the work he put into these nights.

--Chris Newton VK2ZCJ

HORNSBY & DISTRICT ARC.

The next mid- monthly meeting, is on Tuesday, 8th. April 1997. At 8:00
pm. In the Mount Colah Community Centre, Pierre Close, Mount Colah.
(Located near the Eastern Entrance to the Railway Station.) This is the
Clubs informal get-together, to discuss any technical problems, that has
arisen, with our equipment. There will be a demonstration on the correct
procedure, for using the Gateways, on Packet Radio, by Mike VK2MJ, it
will he demonstrated, on two computers connected together, thus
preventing the emission of unnecessary RF. to the airwaves. Visitors are
most welcome.

Training classes, are held each Thursday, evening at 7:15 pm, in a hall at
the corner of Paimerston Rd. & Burdett St., opposite the Hornsby Hospital,
for more information phone, Tony VK2BTL on 9487 3383.

The Club conducts, a net every Monday night at 8:00pm. on VK2RNS.

The frequency is 147.250 with a positive offset. Feel free to join in. All are welicome. Listeners set your scanner to 147.250. Remember, we would like to hear from you, or better still we would like to see you at one of our meetings. Visitors are most welcome.

Should you wish to know more about the Club, or its activities, please write to .. H.A.D.A.R.C. at Post Box 362, Hornsby, 2077. or contact the Publicity Officer, John on 9807 2490.

--Submitted by John W Turner VK2WRT-Publicity Officer.

The BLUE MOUNTAINS AMATEUR RADIO CLUB INCORPORATED,
WOULD LIKE TO ADVISE ALL LISTENERS THAT THE CLUB MEETS
ON THE FIRST FRIDAY OF EACH MONTH (EXCEPT JANUARY) AT
THE SPRINGWOOD HIGH SCHOOL LOCATLED ON GROSE ROAD
FAULCONBRIDGE.

DIRECTIONS TO THE VENUE CAN USUALLY BE OBTAINED BY
GIVING A CALL ON THE CLUB 2 METRE REPEATER ON 147.050 MHZ
(+600 OFFSET).

THE MEETING STARTS AT 8.00 PM.

THE NEXT MEETING, TO BE HELD ON FRIDAY THE 4th OF APRIL,
WILL SEE PHIL DERBYSHIRE VK2GPB TALK ON LIGHTNING AND
STEPS THAT CAN BE TAKEN TO MINIMISE ITS EFFECTS.

THE USUALL TEA, COFFEE AND SCONES WILL BE SERVED DURING
THE COURSE OF THE MEETING.

AND DON'T FORGET THE SECOND FRIDAY OF EVERY MONTH IS
THE BMARC FOX HUNT, OR SHOULD THAT BE HIDDEN
TRANSMITTER HUNT.

THE NEXT HUNT WILL BE ON FRIDAY THE 11TH OF APRIL.
HOUNDS + SNIFFERS MUST BE READY TO DEPART PROM THE
INTERSECTION OF GROSE RD AND CHAPMAN PARADE
FAULCONBRIDGE AT 8.00 PM.

FOR MORE INFORMATION AND DIRECTIONS GRAB A PEN AND
PAPER AND JOT DOWN THE FOLLOWING PHONE NUMBERS;

ADRIAN VK2BFN ON 015 108 504
KEVIN VK2MNU ON 0417 242 726
ALAN VK2YYJ ON 015 097 217

ALTERNATIVELY, YOU COULD COME UP ON THE WEEKLY CLUB 2
METRE NET HELD EVERY WEDNESDAY AT 8.00 PM ON THE CLUB
REPEATER FOUND ON 147.050 MHZ.

IF YOU HAVE NOT PARTICIPATED IN A HIDDEN TRANSMITTER
HUNT BEFORE AND WOULD LIKE TO FIND OUT WHAT EQUIPMENT
IS INVOLVED PLEASE CONTACT ANY OF THE PEOPLE PREVIOUSLY
MENTIONED. THEIR NAMES AND PHONE NUMBERS WILL BE

REPEATED SHORTLY.

BASICALLY, ALL YOU NEED TO GET STARTED IS A 2 METRE RADIO
PREFERABLY WITH AN S METER, A SMALL DIRECTIONAL
ANTENNA, USUALLY A 2 OR 3 ELEMENT YAGI AND AN
ATTENUATOR.

THE CLUB DOES HAVE INFORMATION ON BUILDING YOUR OWN
EQUIPMENT THAT IT IS HAPPY TO SEND TO INTERESTED PEOPLE.
REMEMBER YOU DO NOT NEED A RADIO LICENSE TO PARTICIPATE
IN THE HUNT SO WHY NOT USE THESE EVENTS TO INTRODUCE
NEW COMMERS TO THIS GREAT HOBBY OF OURS.

THOSE PHONE NUMBERS AGAIN ARE:

ADRIAN VK2BFN ON 015 108 504
KEVIN VK2MNU ON 0417 242 726
ALAN VK2YYJ ON 015 097 217

ALTERNATELY, YOU COULD SEND A STAMPED, SELF ADDRESSED
A4 ENVELOPE TO

THE FOX HUNT CO-ORDINATOR
BLUE MOUNTAINS AMATEUR RADIO CLUB
PO BOX 54 SPRINGWOOD 2777

AND WE WILL SEND YOU SOME INFORMATION.

AS WELL AS THE USUAL EVENING MOBILE FOX HUNT HELD ON
THE SECOND FRIDAY OF EACH MONTH, WE WILL BE CONDUCTING
A SATURDAY AFTERNOON HUNT TO BE HELD ON THE 19TH OF
APRIL AT 2.00 PM. MORE DETAILS WILL BE ADVISED AT A LATER
DATE, SO STAY TUNED.

--ALAN WHITMORE VK2YYJ, PUBLICITY OFFICER, BLUE MOUNTAINS AMATEUR RADIO CLUB

AUSTRALIAN AMATEUR TELEVISION CLUB

THE NEXT MEETING OF THE A.A.T.C. Inc WILL BE HELD AS USUAL
ON THE 2ND SUNDAY OF THE MONTH, THAT IS APRIL THE 13TH.
AT 109 WIGRAM ST. PARRAMATTA 1.00 PM,

A TECHNICAL DISCUSSION WILL BE ABOUT THE NEW 23cm DIGI
READOUT BY MARK VX2XOF DUE TO BE RELEASED FOR THE
23cm Rx.

NOTICE TO ALL MEMBERS, 2 FLOPPY DISCS ARE FOR
AVAILABLE NEXT MEETING, MEMBERS AND OTHER SOFTWARE,
DO NOT FORGET !!

DIGI READOUT BOARD SETS WILL BE AVAILABLE NEXT
MEETING.

THIS MEETING IS AS USUAL OPEN TO ALL MEMBERS AND ANYONE
INTERESTED IN AMATEUR OR SATELLITE TELEVISION.

FOR MORE INFORMATION ABOUT ATV. CONTACT BOB THE
PUBLICITY OFFICER ON (02) 9587-3491 DURING NORMAL CIVILISED TIMES.

--A.A.T.C. Inc. Publicity Officer Bob Barnes.

>feelings....
> 73's Allan KB8RZV

While learning German as an undergrad, my prof told us that if we visit Germany and don't speak perfect German, folks will turn their backs on us and walk away (he was born and raised in Germany).

Maybe HF is a bit similar. When you say "73's" as above, you're saying "Best regards's" which is awful English. That might be reason enough for someone to give you a cold shoulder.

Before any newly licensed op gets on the air he should listen listen listen! (Years ago while waiting the three months for the license to arrive in the mail we had no choice *but* to listen!) Get a feel for all the (universal) procedures being used, and use them yourself to "fit in."

A week or two ago, someone heard a couple long-time licensed hams get on 2m for the first time with their brand-new HTs. That someone promptly came over here to make fun of these two old-timers because they weren't familiar with how repeaters operate. So cold shoulders are turned against folks above 50 MHz, too.

WAIT!!!! DON'T DO THIS. The *new* GlowBugs list will have an
automated subscription address; rather than flooding Conard's
mail box, wait for him to post the sub'ing instructions on here
so you can subscribe yourself. I'm sure Conard doesn't want hundreds
of emails saying "sign me up!" (Bad boy, Brian!)

This note was *only* for the handful of folks sub'd to the old
Glowbugs list (whose host site was asking a yearly fee from each
reader); Conard will subscribe them by hand. This note wasn't meant
to be a public invitation to email him and have him do all the subs
manually.

According to my Oxford dictionary,
1. Meteor means any atmospheric phenomenon,
2. Meteorite is a meteor that has hit the Earth.

7.3W, Jeff KH2PZ

A complex integer whose norm is a rational prime is a Gaussian
prime. (Gauss)

If the General and Advanced class licensees don't get full access
why should the Novices and Techs? We call it "Incentive Licensing" -
greater usage of a band is supposed to be an incentive to upgrade.

7.3W, Jeff KH2PZ

A rational prime is not necessarily a Gaussian prime.

>Amateur Radio Station AB3A

I've heard that Cost of retrofit from AM to FM is a consideration, but that the capture effect issue is the real reason. When two stations transmit at the same time, the air traffic controller or other pilots WANT to hear the interference so that they know that communications was missed. FM's capture effect can completely lose the weaker station. At least this is the explanation that I've heard over the years.

>Brianb Petersen
>brpeter@ix.netcom.com
Not this dumb rumor again. This rumor is wrong. Here is the actual story.

First, Bill Gates has made a well publicized personal investment in Teledesic (Microsoft has NOT invested in Teledesic and is not involved to the best of my knowledge - I work there but am speaking for myself when I say that) together with Craig McCaw, formerly of McCaw Cellular before he sold it to AT&T, who also invested in Teledesic. Teledesic is a "BIG LEO" not a "Little LEO". Teledesic has already received its frequency authorization up in the GHz range (14 and 27 GHz come to mind). Teledesic is supposed to provide high speed data access via satellite to the entire world. Those data links can be used for voice, data, image or Internet access. I believe it goes "online" in 2002.

"Little LEO"s are a completely different beast. Except for the first systems already in orbit, the new ones do not yet have allocated frequencies. Little LEO's desire to provide handheld "messaging" services - e.g. "2-way" paging like messages, short email - to/from low-earth orbit satellites to handheld terminals. The Little LEO industry is requesting a flexible allocation scheme that basically gives them access to shared frequencies all over the place below 1 GHz. Included in their request is the desire to "share" the Amateur allocations at 146-148 MHz, 219-225 MHz and 420-450 MHz.

Summary
The BIG LEOs are not the same as the Little LEOs. Teledesic is a BIG LEO partially funded by personal investments of Bill Gates; Microsoft is not involved to the best of my knowledge. The Little LEOs are proposing "shared" access to Amateur VHF and UHF spectrum. The Little LEOs have many hurdles yet

to cross before such a proposal becomes a reality. Still, Amateurs are wise to use every opportunity available to oppose the Little LEO industry proposal.

I can tell that you have never tried the MIR repeater, or traveled to a foreign country where the 70cm band is from 430-440MHz and 440-449.995 isn't available. No there isn't much FM below 440 in the U.S., but there are legal moral uses. -art clemons-

> that way for a long time.

I don't know about 50 years but some recent studies show that you can have Alzheimers for a long time and not have any of the "classic" symptoms. This is becuase the brain can deal with the slow deterioration from Alzheimaers. The problems come when the brain suffers from numerous mini or micro stokes (not related to Alzheimers). The damage to the brain occurs too quickly for the brain to deal with it. This is what causes the well known symptoms.

From: mac@cis.ksu.edu
Message-ID: <mac.859567412@zaurak.cis.ksu.edu.cis.ksu.edu>
Source record: 201675
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc

I've been asked by our local Emergency Preparedness office to try to
link the 146.07/67 or 146.355/955 repeater in Topeka, Kansas, with the
147.855/255 repeater in Manhattan, Kansas, (about 50 miles distant).

While I have several IDEAS how one MIGHT got about this, I don't have
the slightest KNOWLEDGE and wonder if anyone can cite publications or
give real-life examples of how to link two repeaters?

Message-ID: <5hjuch$6u4@login.freenet.columbus.oh.us>
Source record: 201482

The DOB info is on the commercial licenses. It does help serve the purpose of identification. Always has been. They used to carry info on height and weight also. The telegraph certs carry a picture also, but they are internationally recognized licenses. I don't understand why someone would complain about privacy issues on a license. What's it all comming to..., no drivers license picture, birthdate address, etc.

Seems like a silly complaint to me.

>While I have several IDEAS how one MIGHT got about this, I don't have
>the slightest KNOWLEDGE and wonder if anyone can cite publications or
>give real-life examples of how to link two repeaters?

I've got lots of experience with linking two repeaters (and more) together. There are quick and dirty ways, such as setting up a receiver on the other repeater's transmitter frequency, and mixing it with your repeater receiver's audio. (Or to transmit on the other repeater's receiver frequency.) However, there are lots of problems with this approach, including lack of control if the other repeater is on, etc. (I can go into more detail if required.)

The very best way to link two repeaters together is to make a full-duplex link on another band, such as the 420-450 Mhz band. That way you have an audio path going from repeater A to repeater B, and another audio path going from repeater B to repeater A. There is never any problem with control problems, as the original receivers that the mobiles and portbles are transmitting into are not affected by the other repeater. This can also be done with a simplex frequency going back and forth from repeater A to repeater B, with the problem that when one repeater comes up it has control of the link in the other direction, even if someone at the other repeater has keyed up at the same time. It depends on how much control you're trying to have of the situation. Of course, this interconnecting can also be done on phone lines, if the circuits and funding for them are available.

I can go into much more detail on all the above if necessary, but you're going to have to make (or have already built in to your repeater controller) the PTT and audio capability for what you're trying to accomplish.

Hello!

May be you will interested in this information.

Our firm, "HAMILTON GLOBAL MANAGEMENT" is the distributor of
"BSS" company, St. Petersburg, which is the producer of the GMDSS -
TRAINER. It was created in compliance with international requirements
of ITU, IMO, and INMARSAT for preparing and attestation of marine
specialists for work in GMDSS areas A1, A2, A3, and A4.

The learning environment of the Trainer is based on the teacher's
handbook in the field of GMDSS. It's kept in the informational
database of the Trainer, in form of a classical Hypertext and provides
the user with main information on all chapters of the training
program.
The database contains texts, color pictures, video films, graphic
maps, data of coast radio station, etc.

Practical tasks are implemented by a complex of hardware radio
communication means (in form of active representation on display's
monitor), instruction for their operation, and informa-tion for
on-line radio traffic in case of distress, emergency, activities to
ensure navigation safety, as well as for commercial radio traffic.

We also have demo version (size of it is about 2.5MB) and we may send
it to you if you are in interest.

Your faithfully,

Alexander Nikolayev

Michael,

Your comments here remind me of the accusation you leveled at me the other day. You seem the be pulling "facts" out of thin air. You speak to others' motivation and goals, sorry Michael, you can't know our minds. You make these rash statements despite the fact that the anti code test crowd has repeatedly and vigorisly denied what you claim is true.

Are we to believe you, and assume that all the folks who post here who do not believe that amateur radio is served by the code test, are liars.

I believe that the folks who would end the code test are honorable and you defame them with this broad brush accusation. An apology would be nice; and quite a surprise.

Oh yes, that really sounds like an emergancy. You people are so
desperate to play with your two way radios that you latch on to
anything even though it is outside of the amateur radio code to
provide such a "service".

The reason you never get a chance to play with the big boys anymore
is that they have their own radio networks and they are fed up with
you playing radios while they are trying to do their job.

Get a life.

:Tomorrow is the Hunter meeting, and it will feature a talk by Telstra.

Telstra sucks, and most of their employees will agree with me.

:
: SPACE NEWS
:
: RS-16 SATELLITE IN ORBIT!
:
:A new Russian Amateur Radio satellite--designated RS-16--was launched
:recently, with an average orbital altitude of 460km and having a 3000km
:wide footprint on Earth.
:
:RS-16 is expected to be a Mode A (2 meters up/10 meters down) satellite,
:like RS-10 and RS-15. It's the first Russian satellite to have a 70-cm
:beacon, but that beacon is not yet operational. Beacon frequencies are
:29.408, 29.451, 435.504 and 435.548 MHz.

In Australia a meter is not a measure of distance. Get your act
together.

Hi Brian,

Since this list comes from _tempe.gov_ does it mean that the
"free" is subsidized by the government? Just curious. ;-)

The whole damn internet is subsidised by the government. I work
at a government facility if I sign up with a local provider I go
through the same machines and T3 lines I would go through from
work. I use a national provider because I travel so much. I don't
post from work for exactly the reason cited above.

Source record: 201548

Hello.

I have several questions:
1. Where do I get information about the AX25-protocol or could someone send me an overview about this?
2. How are SSTV-pictures coded (start/stop-signal, phasing etc)?
3. I have an JRC transceiver (JST245DXG). I want to control this machine over the serial port. But it doesn't work. The "simple" commands like setting
AGC or bandwidth work correct, but things like setting the frequency or setting PBS don't work. I tried many times with an terminal program - nothing! Please help, because I writing software for OS/2 to control this type of machine.
(The cable, baudrate, start-, stopbits, databits... everthing OK!)

Thanks alot for answering!!!

144-148 is, of course, the 2m ham band and you can't use that
for ski patrol ...

> Only a
> couple are available with the higher frequencies. One dealer
> told me we have to get a letter from the CSP authorizing us to
> use their frequencies before he'd lease (not sell) us a unit.
> Are these higher frequencies subject to different regulations or

I am not familiar with Canadian licensing requirements ... talk to
Industry Canada, I believe it's called, it used to be DOC, but I'm
under the impression that things have changed ...

> The only HT I've found so far that seems to meet our requirements
> (above frequency range, 5 watt output) is the Motorola HT 1000.
> It's quite pricy (out of our budget actually even on a lease);
> are there other brands/models that would be good?

Motorola has things down to about the $250 (US) price range for
a VHF HT in their "Radius" line ... Ericsson/GE's low end VHF HT
is about $383 (US) list price from dealers on the web.

Yaesu, Kenwood, and Icom also make commercial stuff ...

As I said, check with your government regulatory agency for
the straight scoop on licensing requirements. Unfortunately,
some dealers will sell radios programmed to any frequency
you ask for, without regard for whether you have a license or
not ... I am sure your organization wants to operate legally.

Good luck,

Carl - wa6vse

NO, Jeff ... despite your eletist ideas, there is NO reason to justify
giving a newcomer the cold shoulder ... that sort of class-conscious
eletism and the licensing caste system are at the root of the problem,
not merely a symptom ...

> Before any newly licensed op gets on the air he should listen listen
> listen! (Years ago while waiting the three months for the license
> to arrive in the mail we had no choice *but* to listen!) Get a
> feel for all the (universal) procedures being used, and use them
> yourself to "fit in."

So everyone has to fit your mould before they can begin to operate?
Everything has to remain the way it was years ago forever?
That sounds like the Archaic Retro Radio Luddite mentality ... "nothing
can ever change with the times, there should be no progress, and
what was good enough for Grandpa should be good enough for all
future generations forever ..."

> A week or two ago, someone heard a couple long-time licensed hams

> You want SSB, take a SSB test. And so on. Unfortunately the no-code
> contingent consistantly calls this "too complicated". Their ultimate
> goal is no-code, no-theory. The ultimate in uncomplicated licensing.

Mike, that's an outright lie ... and you damned well know it!

We no-code-test advocates have VERY consistently voiced a belief
that the written tests should be made more meaningful and relevant
and the wrote memorization of answers to the theory parts should be
eliminated (band limits and other rules things are simple memorization
for everyone, but people shouldn't be able to get a license without truly
understanding the technical parts)

In fact, it's been the pro-coders (you included, I believe, though I
haven't
checked the archives) who keep saying "eliminate the code, eliminate
the theory, we're all appliance operators anyway ..."

I know you have some very slanted views on the code/no-code
issue, and believe it or not I believe that you're entitled to hold
those views even though think they're ridiculous and oppose them
... but please try to refrain from outright lies in your zeal to
forward the pro-code position ...

Whining? No, not at all.

For me, the issue is a base standard for the priviledge of using the amateur frequencies and emission types. One must pass certain minimum requirements.

As far as actually using the code, well some do and some don't. That's not the point. If we do not have minimum test standards, then we might as well do away with the amateur license all together and open the frequencies to everyone.

Absolutely ANYONE can pass the code test IF they apply themselves. I know; I've taught classes in the past. If someone isn't willing to put forth the effort to learn the code, they don't (in my opinion) deserve the license.

>
> I think it is a bit of over-generalization to condemn vanity call
> applicants as the type, "the hobby be damned, just as long as I have my
> call."

Perhaps my brush was a bit broad, but there certainly has been
what seems like an irrational amount of frenzy about vanity calls.

> Maybe some people feel that way, but I tend to think that most
> vanity call types DO have an interest in the long-term survival of the
> hobby and haven't allowed vanity calls to be the distraction you claim
> they are.

FIrst, that "interest in the long-term survival of the hobby" that you
refer to seems for many older, "higher-class" licensees to be more
"interest in preserving the status quo and enhancing their own ego's
vision of their superiority" ... clearly not all feel that way, but from
my perspective, FAR too many do ...

Second ... I ridiculed the *article* because it's whole point was to
stress how wonderful, exciting, and all-important the vanity call
program was to ham radio ("a breath of fresh air" ... "the best
thing since sliced bread" sort of enthusiasm ... which seems to
me to be copletely out of proportion ... to the extent that it's almost
"obscene" in the same way that it's "obscene" for some to spend
$1000 per plate for some political fund-raising dinner while children
go to sleep hungry a few blocks away in the same city ... it's a
question of one's values and priorities ... and how they can get
twisted ...

> But as a technician class licensee, that hasn't been open to you as of
> yet.

I could care less ... I've had this call since the mid 70's and if someone
offered me a 1x2 or 2x1 tomorrow, I'd not have the least bit of interest.

Of course I'm not a CW fan, so it doesn't make a critical difference to
me in that sense ... the modes I use aren't so seriously limited in their
ability to convey information ... and my ego doesn't require a "special"
callsign indicating some false sense of "status" and "importance" like
some people's egos do ...

> As they say, "people in glass houses shouldn't throw stones." Most
> of the people who criticise vanity calls are ones who aren't qualified to

> get one under the existing gates. Vanity calls aren't new, they've been
> around for years in one form or another. If extra class licensees have
> first dibs on these calls, what's the problem??

Again, I wouldn't take a new call if you gave me one "no strings attached."

HOWEVER, I do take exception with the concept of "qualification" as you seem to view it in the above paragraph (and as many "higher class" hams view it) ... and I'll be quite direct about it ... many, many "higher class" hams
aren't qualified to operate that which their license permits them to operate.

While many "higher class" hams are competent technically, there are, quite literally, thousands and thousands of them who are virtual idiots when it comes to how their radios actually work inside ... people who would be downright dangerous if they tried to open up their radios and work on them ... people who, like MD, say "I just want to yack and beep and I don't want to know no stinking theory, because if it stops working I'll just put it in a box and send it back to Yaesu."

And many "lower class" hams are far more qualifed than many of those who view themselves as "better," but have been locked out because of a lack of interest in, or an inability to, achieving faster beeping speeds ... this is
totally wrong, distorted, and should be changed ...

The entire issue of "qualifications" for ham radio needs to be redefined in terms of what is relevant and meaningful in today's rapidly advancing technical
world ... clearly "skill" in emulating a grossly inefficient text to tone coding
scheme in wetware is NOT a really relevant measure of one's "qualifications"
to operate radio transmitting equipment ...

Steve ... as usual, you miss the point ... I believe that Len was not
saying that we *shouldn't* advance (or at least try to) the SOTA ... but
simply that the reality is that hams *haven't* in significant ways in
recent years ...

(of course many professionals in the field are *also* hams and in that
sense contribute to the advancement of the SOTA, but much more could
be done in the ham bands and for ham purposes, if the community in
general would merely accept such progress ...)

Len is pointing out a failing that the ham community presently has and
needs
to correct in order to secure its future survival ...

> > Interesting that "time in grade" must apply so strongly. Does clue

Neither Len nor I have ever said "I know more than all amateur operators
put together" Steve ... I have said "Some hams are technical idiots." That
is, I believe, an unfortunate, but indisuptable, fact.

However, I find it curious that you, MD, and others in the pro-code faction
seem to espouse the view that technical expertise and professional
experince
have no bearing in terms of "qualifications" and are to be ridiculed at
every
opportunity ...

Hi,

I would like to ask if someone have shematic for stereo decoder in SMD technique. Want to modify my SONY ICF-2010 to reproduce in stereo. If any NON SMD stereo decoder chip may operate on 4.5V DC I'd like to get that shematic too.

If I get modification done, will be glad to share my experience with other SONY ICF-2010 users too.

Regards,

Dragan Stojanovic <> dragans@eunet.yu

Absolutely untrue ... some people can pick up code in a few weeks,
some people can't copy at general speeds or above no matter how
hard they work at it or how long the work at it.

> I know; I've taught classes in the past.

Does not make you an expert on the abilities of the entire
population ...

> If someone isn't willing to put forth the effort to
> learn the code, they don't (in my opinion) deserve the license.

That's just "work ethic" and doesn't constitute a rational,
reasonable, justifiable set of "qualifications" for holding a
license to transmit on ham HF frequencies. Nor does that
sort of criteria *belong* in goverment licensing/testing
programs.

These are posted for Rich W2YQ
email head.hamster.juno.com
he has the answers so please reply to him.

1- Icom PS35 internal PS for IC751 and other Icom radios.
vgc working $150 shipped conus
2- Heath SB1400 160-10 meters has Yeasu remote mount head kit.
The rig is the same as the Yeasu 747 with some cosmetic differences.
Head can eith be on the radio or the radio can be remote mounted.
Will ship for $575 conus

Please contact rich if you have any questions.

Unfortunately Barry, not many of us are perfect like you.

Given your obvious expertise and superior intellect, as evidenced by your posting, you may wish to offer yourself as Hon Proofreader to the VK2 Division. I'm sure that the broadcast would gain immeasurably from your omniscience.

Spelling mistakes will be a thing of the past. Parents will be able to allow their offspring to read VK2WI News on the Internet, safe in the knowledge that the text contains no crass Americanisms. Those studying broadcasting in colleges around the country will be referred by their tutors to VK2WI News on the Internet (edited by BARRY O'GRADY, no less!) for weekly examples of peerless prose, each sentence of which has been parsed by the Insuperable Barry! Thanks to Barry, parts of the VK2WI broadcast text will be quoted in the nation's schoolbooks as examples of a writing style that the nation's children could do well to emulate.

Will Barry allow the amateur community to benefit from his vast expertise, hinted at many times, but hitherto unrevealed to the expectant masses? I would think not; empty vessels make the most noise. However, I am happy to be proved wrong, and look forward to Barry's constructive involvement in the amateur radio affairs of this country.

73,

Peter Parker

To all radio amateurs

SB PROP ARL ARLP013
ARLP013 Propagation de KT7H

Solar activity turned down over the past week. Hard to believe, since we still seemed to be already at the bottom of the solar cycle. The average solar flux for the previous 90 days has been 75 for quite some time now, but on March 20 it became 74. The solar flux on every day this week was below that average level. Since the average value for 90 days has dropped, and we consistently see solar flux values below the average, this indicates that we really have not seen a turn up in the cycle.

After the first of the month the solar flux is expected to rise a few points. The K and A index is expected to turn down in time for the DX contest this weekend, but solar flux will still be low.

Sunspot Numbers for March 20 through 26 were 23, 0, 0, 0, 0, 0 and 0 with a mean of 3.3. 10.7 cm flux was 71.5, 70.5, 70.6, 70.7, 71, 70.6 and 69.8, with a mean of 70.7, and estimated planetary A indices for the same period were 3, 5, 9, 4, 6, 12, and 14, with a mean of 7.6.

Sorry... the FCC does not agree on this and I am sure that 99.9% of the
people in this group would not agree with your comment.

People with a learning disability or another type of disability
should be able to use the feq. w/o passing a test. With no
learning disability - physicle problems should meet any standard
that is in place - will be put in place.

For me, I think they should do away with the Morse code section, and
install a new test based on current radao systems (digital / computer).

Searching for an experienced tower person in the Austin area who would be interested in a weekend moonlighting job installing a couple of additional Rohn 25 sections on a small tower. Pls. reply via e-mail - not the newsgroup.

the easiest way to go would be if BOTH repeaters had controllers capable
of link input/output. this way you would put a radio at each site with
a beam type antenna pointing at each other. the radios should be on an
unused simplex frequency in accordance with the accepted bandplan

I see. This is a mathematical statement. And n is a real integer.
If a train leaves New York traveling 50 MPH and another leaves Chicago
traveling 60 MPH, find n.

As a general class amateur I have taken and passed the 13 wpm cw test.
However, if my radio quit working on the cw bands I would never know it.
Why was I required to pass a cw test knowing that I did not like it or
would ever use it?
I do not know the answer. I did it because I wanted the general class
ticket.
And if you think it was easy for me, think again.
I do not feel that I am any better than any other class operator because of
it.
Radio is radio and I say welcome to all who enjoy it as a hobby.

If that sounds like spoiled whining then all I can say is .... whaaaa
whaaaaa.

I heard that they are still going for good bucks because they can still be
used as
a second unit in receive mode and only used during an emergency if the
primary
transmitter dies.

Also, other countries still allow them to be used.

Isn't the difficulty in converting to FM for both receiver and transmitter
rather
large? Manuals are hard to come by, and you also have to shift the freqs a
bit.
It seems like playing with them is the only practical use.

I've tried to get the "Icom Radio Control" program running with no success. It's the one mentioned in March '97 QST. I'm using the generic ICOM.ZIP version. My rig is an IC-761. The interface is a homebrew offering from QST and works well when using other software. It seems like the default Comm port (3) can't be changed. I'm using the interface on Comm1. I've tried using Comm 3 but no go. I know that the ports are functional because I try my TNC on them before changing the RS 232 cable over to the interface. Wonder if anyone has had success with this program or could provide me with some hints or suggestions. Thanks .... Scott VE1AFN.

>completely lose the weaker station. At least this is the explanation that I've
>heard over the years.

Having been an air traffic controller (for 13 years) I always believed
that the AM mode was used just for the reasons Ed stated. Many times
while working in a VFR control tower I have had more than one aircraft
call simultaneously on the same frequency. In many situations had FM
mode had been employed I seriously doubt we would have even known that
another aircraft was calling. At least not until he or she called
again.

Also by the same token, if control instructions were being issued and
an aircraft was to call at the same time and FM was employed, it's
possible that the pilot for whom the instructions were for could miss
them altogether. So, not having the capture effect influence has its
benefits.

And, it's the explanation I have heard through the years.

What about Generals and Advanced class hams? They don't have access
to the entire CW portion.

Novices and Techs CAN have access though. All they have to do is
upgrade to Amateur Extra class. I mean, that's what I did.

Yes, but unfortunately although I agree with your posting, the
moral of the story is that "Money Talks". Even if we eliminated
all testing requirements, or merely eliminated CW for HF (why
eliminating CW for HF would impact VHF, nobody knows, since we
need to protect VHF spectrum), the sad fact of the matter is
that if someone shows up with a couple of billion dollars, they
can purchase our spectrum. No amount of license fiddling and
"code elimination" will solve that problem -- cold hard cash will.

6712. Question - radio communications in remote regions?

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-30 00:00:00 UTC
From: Bruce & Alicia McWatters <pionus@ix.netcom.com>
Message-ID: <5hmd8f$jkl@dfw-ixnews7.ix.netcom.com>
Source record: 201432

I'm pretty ignorant on radio communication and therefore have a question due to a need.
I've do backpacking, horsepacking, and hunting in remote regions of New Mexico, and I would like a radio for possible emergency situations. {My wife is beginning to worry about me and would like me to check in from time to time.) Cellphones don't work in these areas and I would believe that handheld cb's would not have the range due to the rough, mountainious areas. Handheld radios would be the only way to go although a mobile radio would probably be used in tandem. I'm not adverse to getting a license if necessary and always seem to be learning new things.
I'm open to any and all suggestions including further reading matter.
Thanks
Bruce...

6713. Fun contest

Newsgroup: rec.radio.amateur.misc

Source record: 201433

Next Sunday from 1800-2200 UTC DARA (Dayton Amateur Radio Association) is sponsoring a contest. We call it the DARA FM Zip (tm) Contest. What makes this contest unique is the fact that is done on FM only, using the 6-meters, 2-meters, 1 1/4-meters, and 70 centimeters. The idea behind the contest is to see how many different zipcodes you can work using either a HT or base station running less than 50 watts.

Our first contest took place on 2 February and we had good results. There were around 100 stations that participated, and we had 28 logs submitted. This contest gave the new-comer, as well as the older operators a chance to see what can be done on the simplex frequencies, and to prove that there is life beyond the repeaters.

I spoke with a number of people that participated and they had fun. There were even some stations that participated out of the Dayton area. One station happened to be tuning across the 220 band when he heard the call for CQ contest. I found out that he was east of the Columbus Ohio area. This goes to show that contacts on FM simplex can be made from anywhere.

There were also several people that participated in the contest that are now in the process of upgrading.

If you would like more information on the contest and maybe are thinking about doing something like this in your area, visit my web page at http://www.erinet.com/aceflock .

Have fun,
Ace

Rubbish ... Morse has about as much to do with moden radio
communications as does needle point ... we don't have a needle
point test as a "requirement" for HF access, neither should we
have an equally irrelevant Morse test ...

It is becoming increasingly clear that there appears to be
a striking correlation between Morse adherence and lack
of contact with reality ... there also seems to be a strong
coupling with the insistence on "work ethic" and "earning"
one's license through code proficiency ... the point is that
the metric of code proficiency is no longer relevant to the
priveleges granted, therefore it is inappropriate and irrelevant.

> that elite knowledge should be amateur operators?? Get the picture??

Steve ... for the last time, please ... I *never* said "I know more than
everyone
else" ... what I said is that "There are LOTS of people who are more
technically
qualified than the most hams who are being kept out by the ridiculous code
requirements."

I have difficulty in understanding how you fail to see the difference
between
those two statements. (or is it that you simply *choose* to ignore the
difference?)

> > That sounds like the Archaic Retro Radio Luddite mentality ...
>
> Repetitive AND boring..that's Carl. A,mazing howw you've taken over
> someone else insults. So typical of the do nothing armchair general,

You have NO idea of what I do Steve ... so you assert that I do nothing
and attempt to insult me ... what the hell have *you* ever done?

> Monday morning quarterback you and others gave shown. Piss and moan but
> never EVER offer alternatives.

That's a laugh ... the no-code-test advocates have proposed many
reasonable,

sensible, progressive alternatives to the current mess ... the pro-coders
just
systematically ignore them and throw out red herrings like "no-code first,
then no-theory" ... despite the fact that NO serious no-code-test advocate
has
EVER suggested eliminating the theory tests (only pro-coders suggest this),
but rather, have consistently advocated a strengthening of the written
tests.

> > It *is* a bit funny when such "expert, experienced, superhams" don't
> > have a clue about something as simple as how repeaters operate ...
> > however, I'm not advocating making fun of them on the air ...
>
> Nope, just here on the newsgroup(s) So typical, SO YOU

Steve, I try to discuss and debate issues ... *you* try to make
the debate center on *me* ... why this fixation on your part,
Steve? I hate to dissappoint you, but you're really NOT my type ...

The point, Steve, is that it *IS* humorous (in a SICK way) that there
are so many who consider themselves to be "superior" hams who
are, in fact, so pittifully technically ignorant ...

What's worse is that you and people like you think that's OK and
acceptable ... as long as they beep ...

> this time and time again?? Truth hurt???

Yes, Steve that truth hurts ... it hurts ham radio ... and again, I've
never
seen Len say that we *shouldn't* be trying to advance the SOTA, just that
it doesn't seem that we're doing a very effective job of it ...
YOU'RE the one who's trying to "put a spin" on things, not me ...

>
> >
> > (of course many professionals in the field are *also* hams and in that

I have cited MANY examples MANY times, Steve ... you simply choose to
ignore them ...

> Len has pointed out that the SOTA is in the hands of commercial interests

> and has not and will not be in the hands of amateur operators. FACE
> REALITY CARL

I don't recall seeing Len say that we couldn't (or that it was impossible
for us
to) contribute advancements to the SOTA ... again, he merely points out
that

not many of us have been doing so in recent years ... he also points out,
quite correctly, that many things that appear to less knowledgable hams to
be "inventions" or "innovations" are merely "adoptions" of things that have
been
well-known in the commercial field for some time ...

> Check yourself out on dejanews. Many references to the "superior
> intellect" (my quotation) are attributed to you.

I have never stated that I have a "superior intellect" ... that's just
more of
your horse crap Steve ...

> And I won't disagree
> that some are technically lacking, just listen to many repeaters today,

Just listen to HF today ...

> BUT to label those as "technical idiots" puts you into that very elitist
> category that you some smuggly refer to as being a failing of the procode

> faction.

I don't see it as being so outrageous to consider a supposedly "superior"
ham
with his "memorized all the answers for a day or two" Extra Class license a
"technical idiot" when he doesn't understand Ohm's Law and has to ask on
the repeater "How do I cut a dipole to resonance?," etc. Anyone that
stupid
about radio theory DOES NOT DESERVE A LICENSE, no matter how fast
he/she can beep ...

[snipped the rest of Steve's predictibly caustic and absurd drivvel]

6720. Bahamas reciprocal license

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-30 00:00:00 UTC
From: jjhanso1@students.wisc.edu
Message-ID: <333ed5a7.2704953@news.doit.wisc.edu>
Source record: 201440

In August, 1995, my wife, mother, and I decided that we would visit the Bahamas in January of 1996. My first thought was to get a reciprocal license so I found out how and sent my application and $6 to Batelco. I heard nothing back for a long time, so I called down there in early December 1995. They couldn't find my application. The trip came and went and I wrote a couple letters complaining. A few months later, approx. April 1996, I gave up on the whole idea. After all, I had already taken the trip.

Yesterday, my reciprocal license came. I am legal as N9LEA/C6A for the rest of 1997. :)

A year and half late isn't too bad. :)

73 de N9LEA (/C6A!)

2nd statement correct. 1st statement - obvious being exposed to
excessive RF has diminished long term memory. You not only have said it,
but have said it on many MANY occasions.

> You have NO idea of what I do Steve ... so you assert that I do nothing
> and attempt to insult me ... what the hell have *you* ever done?

What you do Carl, is piss and moan. You state their should be an
alternative to the ARRL and then state someone else will have to make the
1st move as YOU are just too busy. As to me, I am working within the
system to make changes. I know that the system can be changed from
within.

>

Lemme see. Code should be dropped because..

No one else uses it.
It's old
It keeps me off HF

any more I've not listed...

>
> Steve, I try to discuss and debate issues ... *you* try to make
> the debate center on *me* ... why this fixation on your part,
> Steve? I hate to dissappoint you, but you're really NOT my type ...

Debate...ROFL. You insult. Infact, you are the king. Everything I do,
I learned from you. My 1st experience on this newsgroup, a question I
had, resulted in a tirade of insults from you aimed at me. Since then,
welll you know the rest. As to your type?? Whay Foolish?? Egotistical???
Elitist?? Stop when I've named enough.

>
> The point, Steve, is that it *IS* humorous (in a SICK way) that there
> are so many who consider themselves to be "superior" hams who

Then there are the technically superior who are in fact amateur ignorant.
You're point is??? That superior technical skills will make for good
hams?? Now that's humorous

>
> What's worse is that you and people like you think that's OK and
> acceptable ... as long as they beep ...

Again, what make you think I BEEP??? What makes you think I accept what
is?? What I don't accept is your elitist attitude to all that is
technical and the refusal to accept other ideas. DEBATE??? That
connotates a 2 way discussion. You have shown that any opinion other
than what reflects you're sorry agenda is wrong. As stated before. All
hail Carl, there is none else.

There is a very small but growing movement
that proposes to ban the "phone" modes on the
HF ham bands. Exampled as Walt and K1MAN,
and a relative few others' only add more fuel to that
ban-the-HF-phone-modes proposal.

One hears very little of this crap on the CW mode,
and virtually nil on the HF digital modes.

Carl R. Stevenson <carl@ais.net> wrote:

>what the hell have *you* ever done?

I've asked you the very same question dozens of time. What have you
ever done for the hobby, Carl? What technical innovations have you
contributed? You complain that you can't have HF access to "innovate"
yet I never have seen a single thing you have >ever< contributed to
the hobby on VHF.

Maybe when we see more of your technical innovation on the bands you
are already licensed for we will be in a position to say "yeah, Carl
is right" -- but now all it appears is that you're a Tech+ who can't
cut the muster and pass a 13wpm code test for 20+ years.

>That's a laugh ... the no-code-test advocates have proposed many reasonable,
>sensible, progressive alternatives to the current mess ... the pro-coders just
>systematically ignore them

I've never ignored a rational alternative. I've merely never seen one. I
feel the role of a "theoretical" and a "practical" examination has merit
within the licensing system. A theoretical tests your book knowledge, a
practical tests your ability to apply your book knowledge in a real-life
scenario. This is the same reason why we have "exams" and "projects"
in school. One tests book knowledge, the other application of it.

Now, before you go off spouting about a CW test not being a good practical,
I'm going to shock you -- I agree. It isn't. It certainly is a good practical
for people who want to use CW on the low bands, but for those who want to
use SSB, it isn't. Or RTTY, or packet.

However, the CW test is better than nothing at all. All I've seen in the
way of "reasonable...alternatives" (as you call them) is eliminating the
practical in favor of 'harder' theory exams, or making the cw test count
as a part of the theory in a combined score.

The problem with both of these proposals is they effectively do away
with the "practical" element of our licensing system. This is something that
I simply cannot agree with.

Do I have a better alternative? Not really. If I could think of an effective
way to make a theoretical/practical examination that was better I'd probably
be a rich person, because then I'd have all the answers to everything.
Unfortunately, I can't devise one. The best I've been able to come up with
is a "mode-based" licensing system where you take a basic examination on
rules, regs, and safety to get a wide range of operating privs with

reduced power, and then take a series of comprehensive theoretical exams on the modes you wish to operate "full power".

Of course, when I propose this, it gets shot down as "too hard". So, you'll understand my skepticism when I believe that the two proposals I have seen would accomplish nothing save elimination of the code exam. The theory portion would certainly not be made harder -- history shows us that the theory is routinely "dumbed down" -- elimination of circuit design, multiple-choice questions, mass-publication of question pools, "re-writing" the Novice question pool for '12 year olds', breaking up element 3 into 3A and 3B.... The list is endless.

I told your buddy Len once before --- when I see a reasonable proposal that I feel protects the integrity of the amateur service, I will support it wholeheartedly. All I've seen from you Carl is a bunch of "We want no-code HF!!" posts as well as condesending posts claiming that amateurs who "yack", "contest", "dx", or "beep" are not somehow 'true hams'. How woefully hypocritical of you, Carl.

Other than that, I haven't seen anything constructive from you in the least.

6729. Creating QSL's via computer?

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-30 00:00:00 UTC
From: Bart Hackemack <hackembl@ix.netcom.com>
Message-ID: <333EF443.63AD@ix.netcom.com>
Source record: 201449
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.dx

I am interested in creating QSL cards using my
home computer and color ink jet printer.

Contrary to popular comments, size is important.
But I do not know of stock in the "normal"
3.5 x 5.5 qsl format. I've seen card stock
in 3X5, 4X5, etc. these sizes seem to be less
than totally accepted for use with QSL's.

Does anyone have experience creating QSL's
via computer?

thx
KN6PL

>No one else uses it.
>It's old
>It keeps me off HF

>any more I've not listed...

Yes, I have suggested the following before and it is always
routinely ignored...even though it keeps CW testing.
The drawback in the proposal that pro-coders don't
like (IMHO) is that it finally eliminates the code test
as an exclusive test element.

Anyway, since Steve seems to have forgotten,
here it is again:

Is there a compromise in the CW debate?

First, any compromise must recognize the concerns of both sides and
attempt to bring them together. Step one is acknowledging that there
is a middle ground. In the CW debate, the middle ground most
frequently mentioned seems to be that even if CW is less relevant
today, there should not be any elimination of CW testing, unless there
is an increase in difficulty for the theory elements. What I propose
here may not be a perfect answer, but it does seem to address both
concerns.

Current test requirements for General and Extra require the passage of a CW test at 13 wpm and 20 wpm respectfully along with a separate theory test. In both cases the CW test is a stand alone, pass (70% correct) fail requirement. But what if we offered test takers the opportunity to take the test elements as they do today OR, as an option, we let them take the 13 wpm or 20 wpm CW test as an integral part of the respective General or Extra theory (i.e. written) test?

How would that be accomplished?
During any VE session, if a test taker completed the CW test with a passing score of 70%, they would be granted an CSCE and then take the theory test as before. However, if they failed the CW test, they would be permitted to merge the CW test results from that day's test with their theory results also taken on that day only. If they still failed to pass the theory test using a merged score, no CSCE would be issued for either part of the testing.

The actual scoring would be done as follows:
The General theory test is 25 questions and one must answer 19 questions correctly to pass. The 13 wpm CW test is 10 questions and one must get 7 answers correct to pass that test element. If we combine the two tests (for a total of 35 questions) and if the test taker scores a total of 26 answers correctly, then he or she passes, regardless of the individual number of incorrect answers on the CW test.

While I haven't shown the numbers, the same scoring process could be applied to the 40 question Extra class test.

Doing this would retain the same overall test methods (only the scoring process would change), no additional record keeping should be required nor would any CSCE be issued for anything that isn't issued today. More importantly, an immediate benefit of this approach is that if someone chooses to not pursue the 13 or 20 wpm level of CW, they MUST get a greater percentage of the Theory element correct in order to obtain an overall passing score. That automatically raises the difficulty level of the theory test for those people that might wish to ignore learning CW at those speeds, which is something many have desired to see happen if any change is made regarding a lowering or elimination of CW requirements.

Worst case scenario for someone taking the General test who didn't attempt to learn any CW beyond 5 WPM: Even if they just filled in answer B for all 10 CW questions, they might luck out and get 3 of the CW questions correct anyway. That being the case, they'd then need to correctly answer 23 of 25 theory questions (92%) to have a total of 26 correct answers to pass the test on a combined score basis.

In summary, I think this suggestion meets the concerns of many hams because:
1. It retains all existing levels of CW testing,
2. It maintains full compliance with International treaties,

3. It makes no changes to the test elements themselves,
4. It improves the theory difficulty for people that ignored CW,
5. It would be an easy to implement process if approved by the FCC and
6. It provides a middle ground solution for an ever increasing area of internal debate among hams.

Note, I have not suggested merging the 5 wpm test at this time because that minimal level of CW testing must be retained for compliance with international treaty. If, in the future, the international requirement goes away, then merging the 5 wpm testing might also be considered.

Hi Bart -- take a look at K7ON's QSL Primer at URL:
http://www.qsl.net/k7on/index18.htm
It should answer all your questions.

I compose "homebrew" QSL cards with my computer and printer -- B&W for now -- on color stock. Works well -- lotsa cutting tho -- I bought a cutting board -- sure saves time if you send out a lot of cards.

Good QSLing

SB DX @ WW $OPDX.298
Ohio/Penn DX Bulletin No. 298

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 298
BID: $OPDX.298
March 31, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, NG3K, W3UR & The Daily DX, WD8MGQ, W0YG, DK1RP, DJ5NN, G4BUE & DX News Sheet, I1HYW, JA1ELY, OZ5MJ, PS7AB, SP2BIK, VE3UOL, VE9AA and VK4AAR for the following DX information.

6O, SOMALI. Bill, VK6ZX, will be traveling in the northeast region of Somalia in the town of Galkayo. He hopes to be active for a few hours during April 8-9-10th. His XYL, Diane, VK6KYL, will also be with him. Their callsigns will be 6O0X (Six Oscar Zero Xray) and 6O0YL (Six Oscar Zero Yankee Lima) respectively. The callsigns have been allocated by the political organization responsible for this region (SSDF). Bands of operation are expected to include 20 and 40 meters. There is and will be limitations to access of equipment which is also used for regularly scheduled non-political AM shortwave broadcasting inside Somalia. The times of operation will be ruled by availablility of equipment and acceptability of running the generator (for power) during sleeping hours. Bill states, "The radio station is a peace project which was given a major upgrade 3 years ago with funding from the Boulder Rotary Club in Western Australia and the Australian Government. It has been operational for some 4 years now and continues to have an influence on the process to establish an accord resulting in a Somali Government. The Radio station was established by Sam Voron VK2BVS (6O0A). To date, the most commonly used frequency from this location is 14275 kHz by Sharif (6O0SC) and Abdi (6O0W) have been on air. The equipment available for use includes a Yaesu Txcvr with a Henry amplifier. The antenna is a log-periodic at between 30 and 40 metres in the air. SWR on 40m may be too high for high power. No ATU is available yet. QSL is via my call, VK6ZX at the call book address (PO Box 463 Kalgoorlie, WA 6430, Australia). Direct QSL with green stamp will be answered."

CALL BOOK GOING PAPERLESS. Almost every avid DXer has at one time or another used a paper call book, but "TIMES ARE A-CHANGING". Some DXers will be affected by the announcemnet that the printed version of the

"Flying Horse Radio Amateur Callbook" will be discontinued. Beginning with the Spring 1997 edition, the callbook will only be available on CD-rom.

CY9, ST. PAUL ISLAND. Mike, VE9AA, reports the CY9AA DXpedition will now take place from June 26-July 3rd, due to special circumstances. No other details were given.

FY, FRENCH GUIANA. The "DX News Sheet" reports Dave, DJ0PJ, will be active again from April 2nd to May 6th as FY/DJ0PJ. Activity will be "QRP" on 10116, 14060, 18080 and 21060 kHz.

GJ, JERSEY. Peter, DK1RP, will be active from here April 6-12th. He states, "As Jersey is not a very rare country I will try to make some CW-activity on the low bands (160,80,40). As I am travelling by air I will not be able to take 'great equipment' with me, but I will try to find a place with a good offset to USA on the island. Each contact will be confirmed via the bureau."

HF1, POLAND. There will be a special event station be active from the city of Gdansk on Polish Baltic Coast which will celebrate its 1000 years birthday. For this occasion there is a special callsign issued, HF1GD, which will be active from now until December 31st. The station will operate on all HF bands, VHF/UHF and satellites. QSL cards via SP2BIK.

IOTA NEWS/UPDATES.......
Steffen, DJ5NN, informed OPDX that he and others will activate Mando Island (EU-125), a Danish island located in the North Sea Coast Group, from May 1-6th. Activity will be on CW/SSB on all HF-Bands, on the well know IOTA frequencies (also check 144/430 MHz). They will use the callsign OZ/LX9EG/p. Members of the group are: LX1NO, DL8DXL, DL2TG, DL2LTM, DL2DRD, DJ5NN and DH0DW.

MEL ISLAND (IOTA SA-047, DIB 24, DFB PR-01, DFH PR-01) will be active April 15-22nd, using the callsign PQ5L (only!!!!). Operations will be on CW/SSB, all bands (try IOTA freq. and Brazil DX Net). QSL via PP5LL.

SAO FRANCISCO ISLAND (IOTA SA-027, DIB 08) will be active April 22-30th using the callsign PR5L. Operations will be on CW/SSB, all bands (Try IOTA freq. and Brazil DX Net) QSL via PP5LL.

JD1, MINAMI TORISHIMA. JG8NQJ/JD1 is reported to be active and will continue to be active until he returns to the mainland on April 23rd. He prefers CW and can usually be found on 20 and 40 meters after 0100z as late as 0600z and after 1100z (until he goes to bed). He expects to return again in June or July of this year. QSL via JA8CJY, direct to CBA or JARL Bureau.

JUST A REMINDER! NH7A which was active in the WPX contest this past weekend, was really Hawaii. Don't get this confused with Kure Island. All Kure Island callsign suffixes start with a "K" (ex. AH7K, KH7K, NH7K or WH7K).

QSL INFO AND NEWS.....
Alan, VK4AAR, has recently been appointed QSL manager for Frank, YJ8AA, and he will have access to all of Frank's logs. Frank will be going with some friends to the Shepherd Islands (OC-111) and Torres Island (OC-110) sometime later this year (callsigns are not yet known, may use YJ8AA/p). Alan will be managing these operations also. QSL to VK4AAR per '95, '96 '97 CBA ONLY (The earlier callbooks show incorrect information). The correct address is: Alan Roocroft, c/o Post Office, Dalveen. QLD 4374, Australia. ADDED NOTE: Alan still has the logs and cards for the March '96 operation from Melville Is (OC-173) by VK8MI (Stuart & David).

QSL cards for the recent St. Peter & St. Paul Rocks DXpedition, ZY0SG and ZY0SK, are reportedly ready and will be mailed within one week. Don't forget to visit their Home Page and sign their guest book at: http://www.glomec.com.br/rocks/index.html

QSL MIX-UP (V5/W8UVZ AND V5/ZS6YG). Charlie, W0YG (ex KY0A), reports that both George, W8UVZ, and he are getting a lot of cards meant for each other. QSL V5/W8UVZ QSOs "only" to W8UVZ. QSL V5/ZS6YG QSOs "only" to W0YG. Do not try to send QSLs for V5/ZS6YG to the ZS Bureau. They will probably never get to him. QSL V51Z, their ARRL CW Contest callsign, to ZS6EZ "only".

RARE ASIAN DXPEDITION. Steve, HA0DU, reports Zoli, HA5PP (ex-3W8DX, XW8DX, XU8DX, ZA1DX), would like to activate two VERY rare Asian countries soon. He needs equipment support. Those interested can contact him at his E-Mail address: HA5PP@hotmail.com (or if it does not work, send your E-Mail to Steve at: Istvan.Bogyo@mdc.hu).

S2, BANGLADESH (POSSIBLE NEW IOTA ISLAND IN WORKS). Giovanni, I1HYW, received a fax from Vittorio, I1SLY, stating that a S2 operation "MAY" start April 5-6th. It will probably be from Hatia Island instead of the island that they tried for last month since they could not get permission to operate. This one will be a new IOTA and count for S2 little letter "a".

SPECIAL EVENT. To commemorate the fairy tale writer Hans Christian Andersen's 192nd birthday, a special event station will be active, on the April 2nd with a special callsign OZ5HCA. The QTH is Odense where Hans Christian Andersen was born in 1805. Odense is located on the Island of Fyn (IOTA EU-029). Activity will be on 14260 +/-, 7060 +/-, 3670 and 3540 khz starting around 0800z. There will be a special QSL card issued. QSL via bureau. If you want direct QSL you can send it to OZ5MJ, Jens Palle Moreau Jorgensen, Jaegerbakken 13, DK 5260 Odense, Denmark.

V5, NAMIBIA. Charlie, W0YG, will once again head for V5 in July, but he will be active mobile. He will be using 500 watts, and will again try 80 and 160 meters. Charlie states, "My signal wont be strong on these bands, but at least I will attempt it with a little different twist in the installation." He also mentions that he is trying for A2, Z2 and 9J licenses. Charlie says this will take time, and he is not sure he

can do it in the amount he has left before he leaves July 23rd.

XU, KAMPUCHEA (CAMBODIA). Reports indicate Mike, XU6WV, has been active on 3512, 7004 and 7007 kHz. His sunrise is currently around 2304z, and his sunset is currently 1100z. QSL via K0TLM.

YN6, NICARAGUA. Hiro, JA6WFM, was issued the callsign YN6WFM on March 12th and expects to be in Nicaragua until December. He was quite active on 40 meters CW in the early mornings. QSLs via JA6WFM to the bureau or direct to: Hirofumi Nakamura, 1311-11 Miyahara-Machi Yatsushiro Gun, Kumamoto 869-46, JAPAN.

ZL9, AUCKLAND ISLAND (Update). Information from Ed, K8VIR, relayed to OPDX by Alan, VK4AAR, states Ed expects to be active on the 1st or 2nd of April for about 5 days. He will be using ZL9DX and K8VIR/ZL9 mostly on 14260 kHz and, if the band is open, he will be on 21300 kHz. Ed suggests the best QSL route for USA/Europe go to his home call as per the "1997 CallBook". For other areas, they can use this route: Ed Hartz, K8VIR, POB 9, Te Anau, New Zealand.

ZS8, MARION ISAND. The "DXNS" reports Chris, ZS8IR, continues to be active on 1822 kHz from 0300z until after his sun rise as much as he can before going QRT in early May. He has worked 330 different stations on 160 meters including the first QSOs with VK6 and JA recently.

Yes, they are getting old and didn't sell very many so there are not many around. As far as being "good as gold" they are useful for use as remote bases on a repeater but the Kenwood 742 is a MUCH better radio for those that want a mobile. I've purchased around 10 assorted band units with an average price of around $200 in the last month or so. The 220 units are worth very little because their are MANY of them available. The last one I purchased I paid $150. 10m and 1.2 are the rarest. I recently purchased two complete IC901's each with a 1.2ghz band unit for $250 each though and an IC900 (worth more than IC901 because the 2m and 440 bands are modules not internal like the IC901) with 2m,440, and 220 for $350. They IC901 itself is not very valuable because it is really just an older dual bander.

I've only been looking for a couple of months so I treat this as another "hams tale" (as in old wives tale) just like so many other rumors that get started

I suppose you'd probably try to weasel your way out of a foreign language
requirement in order to get a degree because it wasn't "relevant."

As far as a "work ethic", that's pretty much been killed off in this country.

>to where it is going.
>I see very few amateur discussing spreadspectrum or digital audio or
>anything else but yesterday technology.

Indeed. That's the very point of the attempt to modernize the service's rules and licensing structure. The way it is now, it incentivizes yesterday's technology and operating techniques (in fact they are more than just yesterday's technologies and techniques, they're now decades behind modern practice). Our rules and licensing structure *should* be incentivizing modern communications techniques instead.

Spread spectrum can offer us many advantages, but not if we aren't allowed to fully exploit it. Digital audio is another area where we could exploit modern FEC techniques to make a more robust communications system, but again the rules prohibit it on the spectrum where it would be of the most value. (There is little need for digital audio at VHF/UHF where signals are generally strong, paths are stable, and FM provides good enough audio quality. On HF, however, it could be a real boon.)

>For example, during the mid 80's there was a major arguement
>concerning the new packet mode. As it happened, we had put so much
>channel space to traditional voice repeaters that there was little
>room for anything else. I hope we aren't doing that to any new modes
>that are about to come to us.

Of course we are. It's that same old "I've got mine" mentality at work which also is the primary motivator of those resisting regulatory reform. And unfortunately that attitude has even infected packet. It is frozen at the level it was over a decade ago. We have the technology to do much better, but only a few amateurs have been willing to give up the old familiar methods for better techniques.

By now slow speed packet should be 56 kb. Amateur equipment has been available to do it for 10 years now. And it is much cheaper per bit than the 1200 baud at which most amateur packet is stuck. (It is almost cheaper heads up one for one when you figure 1200 baud users typically dedicate a radio to 1200 baud operation.) We should have already started deploying T1 equipment (they're doing it in Slovenia, but US amateurs can't seem to match the accomplishments of their eastern European counterparts).

>Anyways I would love to see some discussing about spreadspectrum etc.
>I realise there may be other discussion groups for that type of
>discussing but lets not overly dispurse our subjects. I would hate
>to have a large chunk of our amateur population only aware of a very
>narrow range of technologies.
>Larry ve3fxq

SS has characteristics which make it appealing at VHF and at HF,
but we are restricted to using it at UHF where its benefits aren't
as needed. Like digital audio, SS is most valuable where signals
are marginal, paths are variable, and crowding is intense. That
describes HF, and to a lesser extent 6m and 2m, but at UHF, we
don't need SS. Crowding is almost non-existent, paths are relatively
stable, and signal margins are adequately high. But ironically, that's
the only place we are allowed to use SS, or defacto digital audio.
As usual, our regulations are upside down from what they should be.

And are we supposed to believe that *you* have presented ideas to address the problems the amateur service is facing? The only thing you seem to be able to do is make personal attacks on Carl. At least he understands that communications technology is passing amateur radio by, and that the majority of amateurs are no longer living up to the charter goals of the service. At least he understands that amateur demographics have become unhealthily grey. At least he understands that the amateur rules and licensing structure are seriously out of step with reality and are contributing to the problems. At least he understands that failure to address those issues poses a critical threat to the ability of the amateur radio service to resist further enroachments on our spectrum. All you seem to be able to do is snipe. You're just another Burt. Back in the killfile you go.

>well.
>Larry ve3fxq

I'm sure those who used spark felt the same way. And no doubt those
who chipped flint to make stone knives did too. But it is a telling
point that you no longer use Morse. Times have changed, better methods
of text transmission are available. Spark is gone, flint knives are
a curiosity, and the Morse code is too. It is a skill relegated only
to the communications backwater that amateur radio has become.

Now in most ways, Canadian amateur licensing and regulation are
enlightened compared to the situation in the US. At least you don't
have a baroque 6 tier system of subbands and license classes which
primarily incentivize Morse speed as the highest aspiration of
a radio amateur. It is as if chipping flint were the primary
qualification of a modern knifemaker. Never mind that he uses
440C steel in his knives, if he can't chip flint he's nobody.
There's something very sick about that. It says that learning
to do things a better way doesn't count.

>
>I repeatedly read postings like this claiming that unless the no-
>codes are allowed onto the already overcrowded hf bands, then ham
>radio will die. Does anyone know how and when this strange idea
>started?

The problem with the current licensing structure is not so much that
it prohibits the code test free from getting on HF. Rather the problem
is that it incentivizes the wrong thing. It says that the highest
aspiration of an amateur is to do Morse code very quickly. But the
reality is that Morse code is no longer an important communications
skill. It does not address any of the charter goals of the service.
And insisting on it as the primary measure of an amateur's qualifications
is not only absurd, it has a psychological effect which makes amateur
radio appear to be primarily a Society for Creative Anachronism. That
works strongly against the sort of attitude and spirit amateur radio
needs today in order to fullfill its charter goals and regain a
worthiness to keep access to public spectrum.

That there is one class which doesn't require Morse, the 6th and
lowliest class, does little to ease that attitude or perception.
As long as the only way to progess in amateur radio is by doing
Morse more and more quickly, that will be seen as the highest
aspiration of amateur radio. And that looks very bad to the public
and to the regulators on whose good opinion we must rely in order
to keep our valuable spectrum.

>It seems to me that if the no-codes abandon the vulnerable vhf bands,
>then these will be left underused and undefended. I never heard of
>any commercial interests wanting to grab 20m etc within the past few
>decades. All the commercial interest is in frequencies suitable for
>satellite, cellular or short-range business use, which means nothing
>below 200 MHz where skip might disrupt the system.

Sure, but do you think that amateurs are going to wholesale abandon
their very useful VHF/UHF spectrum just because they can also operate
HF? Are the only people using VHF/UHF Techs? Certainly not. Removing
Morse as the primary determinant of what makes a high class amateur
won't cause us to desert VHF/UHF, but it will change the perception
of amateur radio from that of a backward group of Neandertals whose

goal in the service is to re-enact communications methods of the past. And changing that perception *can* help us retain our valuable VHF/UHF spectrum.

>Sure, if I were a lazy no-coder I'd certainly also be asking for no-
>code access to the hf bands. But I hope that I'd be honest enough to
>admit that it was just for my own benefit, and not invent the
>nonsensical and illogical myth that the very survival of the hobby
>depended on my getting it.

Consider that I've been licensed 35 years, and have had access to HF the entire time I've been an amateur, but I strongly believe that we must shed this image of backwardness that an incentive system which primarily incentivizes Morse speed casts on us. I have nothing to gain from this but the chance that the service I love will survive and prosper well into the next century. (Well I do hope that accompanying a reform of the licensing structure would be a liberalization of digital regulations on HF. I do want to use faster and more robust systems on HF, and I would dearly like to try out some spread spectrum ideas on HF. That is the environment which offers the greatest challenge to these methods, and potentially stands to reap the greatest benefits from their use. We need to get back in the forefront of communications technology, and this is a powerful, and nearly unique to amateur radio, way of doing that.)

>
>You know, I was wondering, if the code wasn't so hard
>to learn, (As people say), if this would even be an
>issue. It seems that if anyone could learn the code
>overnight or in a week, I don't think this code issue
>would even be on anyone's mind.

True. But the variability in the time and effort it takes
for people to master Morse is *very* large. For example,
it took me 6 weeks to get to 5 WPM, and I worked very
hard at it. It then took another 13 months, with more
than 2 hours a day of on and off air practice, for me
to reach 13 WPM. And it was easier for me than for some
others. Some folks who have worked very very hard have
never broken through the barrier that falls in the 8
to 10 WPM range for most people. Meanwhile, others pick
it up with very little effort in a short time.

(Most amateurs are self-selected for Morse aptitude
because those who lack it didn't become amateurs, at
least not in the days before the code test free Tech.
So many amateurs tend to think anyone can do Morse
at 13 or 20 WPM without undue effort. That does not
appear to be the case. Less than 1% of the population
has ever been able to achieve Morse proficiency, yet
many of those people would be an asset to amateur
radio.)

Now none of that would matter if Morse were a vital skill
that an amateur simply must have to operate. But of course
it isn't. More than half of the amateurs who have passed
a code test never use Morse again (according to an ARRL
member survey). And our Incentive (to pass faster Morse
tests) Licensing system is incentivizing the wrong thing.
It makes the highest aspiration of being an amateur the
receiving of Morse at faster and faster speeds. That
is a very bad image to be presenting to the public whose
spectrum we use, and to the regulators who control it.
It says we are a Society for Creative Anachronism, flint
knife chippers in an age of stainless steel cutlery.
That doesn't bode well for our chances of hanging on
to the valuable spectrum that we occupy.

Now most of that valuable spectrum is at VHF/UHF, not HF,
but that's immaterial. The perception Morse testing casts
on the entire service also taints our occupancy of this more
valuable spectrum, which our licensing system treats as
a throwaway we can entrust to our 6th class amateurs. That's
a very dangerous idea.

If we must have an Incentive Licensing system (and I can make
a good case that we shouldn't, all amateurs need the same
knowledge and skill set to perform legally and safely in any
of our spectrum), we should be incentivizing amateurs to
improve their skills with more modern and more powerful
techniques than Morse. Our charter charges us to develop
a pool of skilled operators, technicians, and electronics
experts who can advance the communications SOTA. We are to
provide a ready pool of trained people to step in and augment
the communications of military and civil government in times
of national emergency. But the military and civil government
have no need for Morse operators any longer. They do have a
need for people who understand and can operate and repair
modern communications systems. Our self-training should be
directed toward providing such people, not toward providing
people with increasingly obsolete skills.

Eliminating the Morse testing system, and the incentivizing
of backwater techniques and skills it produces, would go far
toward rehabilitating the image of amateur radio as a progressive
communications service. And that can pay big dividends in the
fight to retain our spectrum.

>

HA HA HA HA oh Carl, you kidder you. I needed a good laugh, thanks.
Seems that the majority of hams, according to your definition then, are
not good operators. HA HA HA HA good one. Since it seems that the
majority seem to want to hang a few HTs on their belts and walk around.
Trying to get better reception by holding them way up in the air.

HA HA HA . But what about a pompous RF engineering putz who may have
good technical skills but is in fact a lousy operator?? Please tell us,
and speak from personal experience.

You know what is so great about you Carl. It's that I can sit down with
the people from ITT and BellCore and a few other technically oriented

companies here in NNJ and we can have a great laugh at your expense.
Seems, of all the "technically oriented people" who reside here, you seem
to be the least qualified to speak concerning what's best for the ARS.
So please, it brings so much pleasure to read your posts, keep it up.

Hoping your week is a-ok

6747. Non-mag mount scanner aerial?

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-30 00:00:00 UTC
From: "Peter A. Forkes" <pforkes@pobox.com>
Message-ID: <333F33FA.154E@pobox.com>
Source record: 201467
Cross-posted to: rec.ham-radio,alt.radio.scanner,red.radio.scanner,rec.radio.amateur,rec.radio.amateur.misc

I'm looking for an aerial for the scanner in my car. Rdaio Shack do a magnetic mount aerial, but I'd rather have one that I can mount on the side/hood of my car (frankly, I don't want to add another 3 feet to the hight of my car).

Anyway, I'd like to hear from anyone who can either tell me of an alternative aerial or can give mt the name and address/phone number/e-mail address of a company who make such aerials.

Thanks,

Peter

|> More people speak latin, so why waste your time learning a "dead
|> language?"

It may be that more people can read Latin, up to some level of competence, than Esperanto, but I would guess that more people can speak Esperanto than speak Latin.

Anyway, if you want to see some Latin, go to the Pagina originalis:

http://www.jura.uni-sb.de/Rechtsgeschichte/Ius.Romanum/origo.html

And if you want more information about Esperanto, see:

http://wwwtios.cs.utwente.nl/esperanto/

And if you want to waste time, why not become a radio ham? :-)

> substantive to add.

Quite the contrary Gary, I find Carl's posts enlightening and highly entertaining. I did, until this post, find your postings insightful and informative.

>
> And are we supposed to believe that *you* have presented ideas to
> address the problems the amateur service is facing? The only thing
> you seem to be able to do is make personal attacks on Carl.

On the few occasions when I have offered suggestions, Carl has seen fit to attack me. I do not turn the other cheek. I give back what I get and then some. Quite frankly, the problems with the ARS seem to be very small in comparison with the rest of the world. It's interesting that many countries have access to these newsgroups, yet nary a word. Seems to be an Amerikan problem. And a problem that technology is not going to solve. Quite frankly the elitist attitude that Carl shows continually is a bigger problem that anything the code requirement can cause. Technology being the be all and end all savior of the ARS will force everyone away except for a select few technicians, such as you and Carl. THEN WHAT??

> At least
> he understands that communications technology is passing amateur radio>
> by, and that the majority of amateurs are no longer living up to the
> charter goals of the service. At least he understands that amateur
> demographics have become unhealthily grey. At least he understands
> that the amateur rules and licensing structure are seriously out of
> step with reality and are contributing to the problems.

So far so good.

> At least he
> understands that failure to address those issues poses a critical
> threat to the ability of the amateur radio service to resist further
> enroachments on our spectrum.

Address by what?? insult?? Elitism??? By forcing the very people he espouses out by his over insistence that technology is the ONLY thing the cure. By insulting those who have an equal interest in the ARS?? You

know the ones, the beepers, the yackers, the dx'ers. You know, anyone who doesn't bow to the technology idols, those that have no business possessing a license. That he understands. RIGHT!!!

> All you seem to be able to do is snipe.

That's me, snipe hunter supreme.

> You're just another Burt. Back in the killfile you go.

Now I am insulted, to be ranked with Burt. Maybe Burt is right. Judging from Carl and his ilk, maybe he's right.

Into the jokefile you go. Hopefully, the gang will get a few laughs from your postings like we do every Monday with Carl's. Keep up the good work.

HEY WAIT! If I'm in your killfile, you won;t ever see this. WOW

>unrelated to the "skill" tested.

Yes but you are not interested in HF since there are only "old
farts" on that part of the spectrum. You would be more interested in
the frequencies above 50 MHz.

Hello all,
I have a Yaesu FT-2500M for sale.
About 7 months old,low hours,great condition,alpha display,mil-spec.
construction,5-25-50 watt output,31 memories,built in tone
encoder,extended receive,mod has been done for extended transmit.

I have box,packing,bracket,wiring,manual,etc.

Asking $200 and I pay shipping.

Also have an Allmax eprom programmer.

Used 1 time.I paid $650 for it and will negotiate price.

I also have an MFJ 949E tuner for 1.5-30MhZ.

I transmitted once with it.No box or manual but it's in excellent
condition.

Asking $100 or best offer.

Also have an Astatic Night Eagle microphone,never used.I never even put
a plug on the cable.No box,have manual.A little dust but looks
beautiful.

Asking $90.

If interested in anything e-mail me at larry666@gdi.net

73,
Larry Ke4rur

Grant, Grant, Grant,

You, whose opinions I have grown to respect so highly--are you now falling prey to that unique American marketing phenomenon--"charge a lot and your customers will become evangelists"? I can't tell you how many times I've seen this almost subconcious reaction to paying more money for something--it's a knee-jerk response that results in the ongoing self-justification and attempt to convince others of the wisdom of your actions.

Think of the number of Boatanchor enthusiasts outside of the small coterie of 700 that cannot offer their experiences to readers of Jack's For-Pay list. Might there not be many more than 700? Think of the often deep ruts that the party of 700 fall into--interesting to a few, I suspect, but perhaps not to the many.

I value the archived digests of the For-Pay list up on sunsite and am truly glad they are made available, but I hardly view an attempt to provide a (traditionally normal) free equivalent as an attempt to undermine it. I am not alone in my distaste for the tone of the operator of the For-Pay list, and feel that more bandwidth is wasted scolding the elder ops that are probably not as computer literate as we younger types. And I would like to know why it is the only list I'm aware of that DOES cost money, and in fact has posted a 75% increase in only its second year of For-Pay operation. What will it cost next year? $30?

To me, it's hardly the money--it's the attitude. But worse than the attitude of its "owner-operator" are the attitudes of its members when presented with an alternative--what's the name of the psychological state of mind where kidnapped people start to identify with and even like their captors--aside from the Patty Hearst effect--is it the Stockholm Syndrome? Reminds me of that. Yikes, can't we all just get along?

Change--the only thing that is constant.

Your BA friend,

Roger WA3FLE
Norristown, PA

Well, once you pay your blood money to the ARRL
for the test manuals and tests, your license is "free" too.

CB, GMRS and now FRS are either post card registration or low cost.
Not to mention, family members can operate too, not like ham
radio where the family cannot use the station if you aren't
there with your license and they don't have one "of thier own".
That is why ham radio is in decline, there is no ability
to get away from the complex licensing of 6 individual ham
radio licenses classes as devised by the ARRL.

When I sat for my code test at the San Francisco FCC office, I had to copy
one-minute of error-free code; there were no questions to answer - just
handed in a sheet of paper containing what I copied. When did the FCC change
to a Q&A format *at their offices*? (not referrring to VEs)
Jeff KH2PZ

P.S. We were ordered to lay down our pencils as soon as the sending
stopped; anyone making any changes to their copy was flunked.

First place to go would be a public or college library. In our campus
stacks we have several shelves full of radio projects books. Our QST
magazine collection goes back to 1960.

>Unfortunately, you will need or short some kind of licence to transmit
>a radio signal. If you want to get a signal on 27 mhz, that is fairly
>easy, a trip to you local radio shack store.

Bad advice - he wants to build a transmitter - you can't operate
a homebuilt xmtr on 11m (unless it falls under a Part 15 device).

>If you want to transmit
>anywhere else you will need an appropriate licence.

Contained in many of those books are Part 15 transmitters in which
no license is needed to operate. For example, 1750m is a license-free
experimenter's band.

First thing to do would be to go to the goverment publications section
of the library, find CFR Title 47 Part 15 and see what frequency bands
you can operate low-power transmitters on, license-free.

Have fun! Building radios is a wonderful learning experience.

Unfortunately most radio user, exept amateurs of course, have very
little regulatory knowledge of radio usage. As long as they can push
the ptt switch, and they hear their voice on the other radio, that is
fine with them.
The radio regulations were put together to help prevent co-use
interference.
I believe you indicated that you were canadian, so am I, contact the
department of industy and science, they have a web page. I am not
sure how I get to it directly but you can go through the 'radio
amateurs of canada' webpage, they have a link.

You can contact the DIS and ask them if there are any frequencies set aside for your type of service.
If you run into problems, you can get in touch with me via email and i will see what i can do on your behalf.

>Al Schwarz ND2K

I haven't been to Trenton for a few years, but at one time I used to tailgate at almost all of the local and not-so-local hamfests in the area (Eastern Pa). Now I do 2 or 3 tops. One of the reasons is the climbing costs to rent 2 or more spaces (outside). I realize that the sponsering clubs have overhead to cover, but some of them seem to be getting greedy. A few years ago I struck the Pack-Rats hamfest off my agenda for this very reason.

To get up at 4 AM, drive 100+ miles each way, pay to get in and for a couple of spaces, then find out that the turnout is poor is becoming more commonplace.

Oh well, maybe things go in cycles and the interest will pick up again.

I am always amused at those who claim to speak for all amateur radio operators. They are so full of it.

Actually, I agree with the disabilty waivers. I've given tests for disabled applicants.

No, I don't think they should do away with code. I doubt that all amateur operators want to see it go, either. Obviously, some do. Good for them. Let them get a CB.

Many (most) don't qualify their stances because they believe themselves
to be correct under all conditions. I'd wager that 50% of all amateurs
believe it to be impossible to copy a signal that they can't detect
much less copy by ear.

> I like the idea of mode-based testing. You want CW, take a CW test.

I have heard few claim that it is "too complicated", although it would
make our licensing structure even more arcane than it already is. What
purpose would mode specific testing serve? Is an inept RTTY operator
going to cause any significant harm to anyone else? For that matter,
as I've asked before, what harm does someone with a lousy fist or
poor copying skills cause by utilizing OOK Morse Code?

>newsgroup and harp how they know more than everyone else and by virtue of
>that elite knowledge should be amateur operators?? Get the picture??

This has been explained to Carl before, and he fails to see that he's just creating a different class of "elites." Witness the fact that a few months ago, a newly licensed ham said that they had interest in putting any test knowledge to use. They just wanted to get on the air and talk to people and have fun. Carl's response was to tell them to go back to CB if they didn't want to contribute to the "service", and that ham radio had no place for people like them.
Carl has been in my killfile ever since. The only thing I see of him now is when someone quotes him. And even *that* is too much!

> recent years ...

First, try not to put YOUR typical spin on someone else's postings. You
have on several occasions have chastised others for doing the same as you
are guilty of here.

Len has stated MANY times that amateur operators DO NOT advance the SOTA.
That the ARS, with very few expect ions is a user of existing
technologies, a borrower of technologies. Why must you insist on ignoring
this time and time again?? Truth hurt???

>
> (of course many professionals in the field are *also* hams and in that
> sense contribute to the advancement of the SOTA, but much more could
> be done in the ham bands and for ham purposes, if the community in
> general would merely accept such progress ...)

Please feel free to cite examples. You've had this very challenge issued
to you many times and insist on ignoring it. Ignore no more Carl. It's
time to actually put up or be repetitive boor you are rapidly turning
into. (No helping from the studio audience)

>
> Len is pointing out a failing that the ham community presently has and
> needs
> to correct in order to secure its future survival ...

The word PRESENTLY doesn't seem to appear anywhere in his posting(s).
More esoteric spin Carl???

Len has pointed out that the SOTA is in the hands of commercial interests
and has not and will not be in the hands of amateur operators. FACE

REALITY CARL

> > > > Interesting that "time in grade" must apply so strongly. Does clue

> >

Check yourself out on dejanews. Many references to the "superior
intellect" (my quotation) are attributed to you. And I won't disagree
that some are technically lacking, just listen to many repeaters today,
BUT to label those as "technical idiots" puts you into that very elitist
category that you some smuggly refer to as being a failing of the procode
faction.

> However, I find it curious that you, MD, and others in the pro-code faction
> seem to espouse the view that technical expertise and professional
> experince
> have no bearing in terms of "qualifications" and are to be ridiculed at
> every
> opportunity ...

I, PROCODE??? Where do you get that?? I have never espoused the procode
party line. I espouse phoney clowns such as you who hide behind the
technically oriented flags of righteousness as those who are the ONLY
TRUE amateur operators. Your very elitist attitude makes you the very
target of ridicule you mention.

Face facts Carl, you are wrong. Be a man, stand up straight and admit
that what Len has said is true. To put words into his mouth does him a
disservice and shows that you, in fact, are not the knowledgeable person
you profess to be.

I don't know why, but I intend to send an e-mail message to the FCC
and ask the question. I enjoyed looking up a person's DOB. During a
QSO I would try to guess a person's age judging by their fist/subject
of the QSO etc... 95% of the time I was wrong but I still enjoyed it.

BTW it has been missing since early February.

Unfortunately, you will need or short some kind of licence to transmit
a radio signal. If you want to get a signal on 27 mhz, that is fairly
easy, a trip to you local radio shack store. If you want to transmit
anywhere else you will need an appropriate licence.

The repeater system at ve3rpt/ve3tfm and ve3ulr has already set up an
extensive array of repeater linking in the southern ontario area. If
you would like information about it use your search engine and search
for tfmcs. If you have further problems making contact with them send
me an email and i will see what i can do. their system has been
working since the mid 70's.

Well, by prior experience with the FCC and UPS, we might as well be prepared for the onslaught of the interference complaints from these "Little LEO's". All these guys have to do is offer a job to one of the FCC commisioners like UPS did and they could get all the HAM bands on a primary basis and we get regulated to a secondary or off limits basis. Budget Crunch in D.C.? Sell off some spectrum!! Hams, what hams, that's the Agriculture Department! One day we are going to have to stand up and tell the FCC that we are not to be discounted. During the Amtrack-Conrail crash in Chase, MD, the celluar phones died becuase during rush hour, next to a busy interstate, the police and fire officials had to compete with business and personal calls on the same cell site designed to handle onlt about 6 calls at one time. The amateurs had to come in to provide site communications. That is probably forgotten. Soon, if we are not careful, then we won't need a lisence to communicate on the ham bands. No code? Forget that, NO TEST!

Bash offered a service where you mailed in money for copies of the latest CW exams. Even offered a free update if the info wasn't correct. Look at one of the old Bash books, or look at ads in 73 Magazine from that era. Bash did prove though that even with all of the answers, some people couldn't pass an exam, he also indirectly lead to the open format for the present exam.
You should also remember how Bash was supposed to get his info about exam questions & morse code tests, people who left the exam, sent in what questions they could remember, what answer there were, and word for word copies of the cw exams & questions. There are definitely hams out there, who can't copy any more code than a tech who picks up the radio shack book and an hour later takes the exam, and those hams passed in front of the FCC. Those hams however are on HF regularly, and some of them may have even learned cw by now, although the novice sections are no longer filled to the brim with people practicing code and thus unless one of them uses a code learning device or computer, (both of which prepare better for exams than QSOs), you won't find many Bash hams on cw. -art clemons-

>Gary Coffman KE4ZV | You make it, | Due to provider problems

Exactly the point, and very well stated. This is indeed the bottom line in our discussion here on policy. I very much enjoy using CW. I can get out fairly well with a minimum of power and a meager antenna (I could no doubt do as well or better if I connected my computer to the rig). But I do not feel my efforts in learning to use the CW mode have done anything to advance the goals of the service, nor do they do anything which would constitute an advancement of the state of the art.

Those who authorize us to utilize the amateur spectrum would indeed be better served by operators who are knowlegable in state of the art communications - those methods used by fire, Red Cross, and the communications service providers. Instead we offer them our best telegraphers. Turns out it doesn't matter though, because many of our operators learn these more relevant skills on their own anyway - without the support of the incentive licensing system.

The future for young people now is in computers. The future in communications is satellites and wireless digital. The amateur service must recognize this, and should encourage it's operators to work in these areas. *The Amateur Service should encourage the use and development in these modes, and seriously begin preparations to change it's upgrade incentives and testing requirements to reflect the major developments in communications over the last 25 (or more) years.*

Our highest esteem should be held for amateurs who have mastered communications techniques utilizing modern technologies. Break my rank back down to Tech+ until I can master the digital modes and track a satellite, or at least require those things of the hams wishing to upgrade from here on out. But promote, defend, and demand code proficiency? Get outa town. It's fun, it can be useful, perhaps even good to know - but

the penultimate measure of radio communications skill? I don't think so.

Communications have undergone nothing less than a revolution. Amateur radio should at least be willing to evolve - if for no other reason than the sake of it's own survival. It's obvious where things are going nowadays, and that's where amateur radio should also be going.

It's true that all of the more advanced communications techniques can be enjoyed with the Technician class privileges. Those of us down on HF just hang out a wire and blast a signal off to the ionosphere and let it do all the work for us. But the accomplishments of some of the more sophisticated operators among us - those working satellites, developing 10 GHz transeivers and antennas, establishing digital switching and data forwarding nodes, should be recognized and rewarded with full amateur radio privileges by allowing them to demonstrate their more relavent, modern skills and knowlege.

There is something positive to be said for the amount of _time_ it takes to develope adequate skills to pass the code exams. While we work toward our upgrade, we pick up some fundamental operating skills. I would claim that it is not the Morse code that makes a better operator, but rather the time spent operating - any mode - which developes the skills we seek in an operator. Perhaps it's time to take this back into consideration.

This idea of "earning" an upgrade by "working" for it - HA! It was never work - I had a blast the whole damn time! Worked better than half the states on Novice 40 CW on a wire at 5 WPM with no sunspots. Now: reading those boring books on microwave devices, or building an alt/az computer interface - THAT would have been work! And more worthy of an upgrade.

I don't expect Gary to see this reply, as he has evidently blocked my email address from his mail server. I guess I scared him or something. ;-)

73,

Jim AC6XG

So, if there's such a big privacy issue here, what's the difference between me getting a name off a mailbox, going to my county health department, and obtaining a birth certificate on that person? Most government documents are public record. I have recieved birth certificates for my fiancee's children because she was unable to drive herself due to ilness that day. I walked in, gave the names that I wanted, and BOOM - here's your birth certificates. Basically, people need to get lives and stop bitching about every little thing that they don't like. >develop the necessary skills of code, and those who don't have that
>passion won't! Those folks who don't desire to master the code can
>continue to use the VHF/UHF region.

First: There is nothing about the code test that makes it a mode
proficiency test such that it even vaguely resembles any on the air
operation.
Second: If you want a restriction on the number of hams with
HF licenses, then tell us how many is too much?
Third: Given that some magic number exists as to when there are
too many HF licensees, then get the FCC to freeze licenses
and start a waiting list so when current HF license holders
become SKs, there license can be reissued.
Fourth: Passion has no place in the testing requirements
for HF licenses (or any other for that matter).

>Making the written tests more difficult is not the answer! That truly
>will limit the folks from all "walks of life." Like I said before, I
>believe most people can master the code. It doesn't require above
>average intelligence.

Tougher theory tests which would limit new licenses makes far more
sense than an arbitrary morse skill. Indeed, your second sentence
contradicts the first as morse also limits people from all walks of
life too.

>> >Secondly, I want to preserve the CW testing,

Sorry, but the federal government (FCC) has no responsibility
to retain or promote art forms in radio. If CW can't be sustained
as an art form on its own, then so be it.

A disability which prevents a person from being a safe driver of pilot
will certainly disqualify them from holding licenses whose primary purpose
is to ensure safety. The fact that disability waivers are allowed by the
FCC implies that the FCC does not in fact consider Morse skill to be that
relevant to amateur operations after all.

Does anybody know if the channel elements for the Motorola MT-500 can be re-tuned ?
I have some in the 150MHz area which I would be keen to have re-tuned down around 2.5MHz.

Thanks ... S.

soren@clear.net.nz

6813. Question about AEA Isoloop 10-30 HF Ant.

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-31 00:00:00 UTC
From: Andrew Farmer <andrew_farmer@bc.sympatico.ca>
Message-ID: <333F8301.3C85@bc.sympatico.ca>
Source record: 201293
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I have the above AEA loop antenna and can't get the VSWR below 3:1 using the LC-2 loop controller. The antenna is mounted horizontally on a 3 foot metal mast which is attached to the end of a wooden 8 foot garden shed. The shed is approx. 7 feet from the side of a 2 story house. I was under the impression that this antenna was designed to be mounted in small spaces such as this and still work well and be able to get a VSWR below 2:1. I have taped both the controller cord and RG-58 coax to the mast as specified in the instuctions but this made no difference.
I am using a Kenwood TS-440SAT and have disabled the internal tuner.

Thanks,
Andrew, VE7AFX

6819. FT-530 Initial Jumpers

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-31 00:00:00 UTC
From: Jason Wiebe <JWiebe@bigpond.com>
Message-ID: <01bc3ddb$ebc63960$c75e868b@jw>
Source record: 201299

Just wondering if anyone can remember the initial jumper settings for the FT-530. I have made all the mods, reset the thing in accordance with all the posted documentation, and I still can't get the unit to TX above 450MHz. Mine came with 3 and 13 closed (purchased in Australia), I have removed 13, and added 15. If anyone has this info, I would love to hear from them, as it makes it hard to track down the problem without knowing if the jumpers are even set correctly.

Thanks, Jason Wiebe VK2TJW

Hello everyone!!

Please take the time to have a look at my new Web Site. It's only a first attempt so don't be too critical. At present it only has a few bits active but each week I intend to extend it so BOOKMARK it and call back each week.

It will hold a list of links I have found of interest both amateur and commercial, plus the EDDYSTONE USER GROUP. In addition there will be items for sale including BoatAnchors, previously enjoyed classic books on radio, old magazines and much more.

The address is http://www.plasma.co.uk/simon/ so do have a look and I hope you find it useful. Any constructive comments would be most welcome.

Regards

Simon

> within.

If you can make the changes that need making from "within the system"
of the ARRL, more power to you ... I don't believe it can be done. I think
there is too much intertia, too many "good old boy" cronies, and a hired
staff that doesn't want their cushy "don't have to work jobs" disrupted.

The fact of the matter is that I *don't* have the time right now to do
justice to an effort of the magnitude of starting a new national
organization
to fight the ARRL ... if I had the time, I'd be very happy to devote it,

but I
don't ... I *will* participate and support such an organization, however.

> Lemme see. Code should be dropped because..
>
> No one else uses it.
> It's old
> It keeps me off HF
>
> any more I've not listed...

Dozens, but I don't feel like reiterating them to you again.
If you haven't gotten them after the several dozen times they
have been posted you're just too dense to ever get them.

> > Steve, I try to discuss and debate issues ... *you* try to make
> > the debate center on *me* ... why this fixation on your part,
> > Steve? I hate to dissappoint you, but you're really NOT my type ...
>
> Debate...ROFL. You insult. Infact, you are the king. Everything I do,
> I learned from you. My 1st experience on this newsgroup, a question I
> had, resulted in a tirade of insults from you aimed at me. Since then,
> welll you know the rest. As to your type?? Whay Foolish?? Egotistical???

> Elitist?? Stop when I've named enough.

No, Steve ... my type is what I've got ... Female, Latina, 5'4" 110 lbs.
38,28,36, long dark hair ...

and insulting you is hard to resist with some of the ignorant statements
you keep making ... that's not the same as trying to make you the
focus of the debate ...

> > The point, Steve, is that it *IS* humorous (in a SICK way) that there
> > are so many who consider themselves to be "superior" hams who
> > are, in fact, so pittifully technically ignorant ...
>
> Then there are the technically superior who are in fact amateur ignorant.

No, there are beepers who have virtually nothing else going for them,
yet feel they are superior, despite their technical ignorance.

> You're point is??? That superior technical skills will make for good
> hams?? Now that's humorous

No that's just common sense ... (I guess that's why you don't get it) ...
since technical skills are a major part of what ham radio is *supposed*
to be about ...

Can some one FAX me a page from the ICOM IC-H6 manual on placement of diodes in the matrix board vs. frequency, for the VHF band.

I have several radios but the diodes have all been cut from the boards.

If there is a formula for calculating the placement of the diodes that would work too.

Thank you for your consideration and help.

Message-ID: <19970331010400.UAA28046@ladder01.news.aol.com>
Source record: 201383

Hi,

I'm not affiliated with these people. But I bought one of their little
QRP transmitters and it's a blast! And it's fully assembled!
You don't have to fool around buidling the thing like a kit.
But it costs about the same price as a kit! I hooked it up
to my dipole, two six volt lantern batteries, connected a
crystal and away I went on 40 meters CW! I made three
contacts right off the bat!

Anyway, you ought to check this thing out. It costs $19.95
plus $4 shipping and handling. If you want a flyer from this
fella, just send him a self addressed stamped envelope. He's
got a neat little part time family run business and basically
does this for fun, and not to get rich like some guys.

It's DWM Communications, POB 87-C, Hanover, MI 49241

73, Dave
WA9KJI

P.S. I'm taking mine on vacation this week. Hope to work you on
7.040 Mhz.

Bruce,

New Mexico is one of the best covered of the western states. We have a very large number of high peaks with repeaters on them. I always carry a dual bander and a GPS when hunting out here. Spend the time to get a technician license and you will be well served. Email me with specifics of where you intend to hunt and I will draw you a coverage map for repeaters in the area.

I think you're all missing the point. First of all ham radio is about enthusiasm. It can be for moonbounce, satillite work, DX, contesting, CW, rag chewing, digital modes, callsigns, redundent super stations, antenna farms, QRP, nostalgic radios, VHF, repeaters, SSTV, mountain topping, or even a huge red "on the air" light outside your shack.

If someone is enthusiastic about their callsign, they probably have a reason, and it's not always what you think it might be. In my case it was for CW work and to get my initials. I don't think I'm any better with a shorter callsign, but it sure makes for less QRM in pileups and it's faster in contests than my old 2x3 which I had for 30 years.

As for CW being outmoded and old, I think you're finding fault with CW because you've never really tried to learn it. I've been teaching Morse to kids and adults and it's amazing what a difference attitude has. I've seen kids learn the code to 5 wpm in only two days, but the average is 2 weeks of 30 minutes per day. It's not effortless, but neither was learning to read.

CW is about as obsolete as RTTY and SSB and FM and AM are. On shortwave it's an important skill because in a pinch anyone how knows it can communicate with anyone else who knows it with only a simple oscillator and a piece of wire. Are you willing to be the one person who intercepts an urgent plea for help on 40M CW someday from somewhere in the world and not be able to understand the request?

I can get a CW transmitter on the air in a few hours with the parts inside my transistorized AM radio. Try doing that with SSB. Granted, not everyone can do this, but if you can get anything to transmit, you can send Morse. On the shortwave bands, a fox hunt scenario isn't of much help. CW works. It's therefore important to have a large contingent of people trained in Morse Code who are occupying these bands. If you didn't know Morse Code you might inadvertently step on those "little beeps" with your 1500 watt afterburner and not even know it.

I once had the opportunity to copy a message in Morse Code that was of an urgent nature related to an emergency. The sender had a small transmitter at very low power and was attempting to get a message out without detection for fear of his life.

You may not believe it, sitting here in the good ole U.S. of A with a Bud in your hand, HBO on the tele, and all the AC you can burn whenever you want to (and unless you live in Waco or Ruby Ridge or run afoul of Janet Reno you're pretty safe) but the world is a dangerous place.

Sure Morse Code is an aquired skill, like reading, and like reading is to every day life, it's just as important (and probably will be forever) on short wave radio.

If you are really interested in shortwave radio, Morse Code is a small skill requirement to master for the privilege you get with the upgrade. Of course I empathize with you because 30 years ago I didn't understand why I had to learn it either, and I didn't like learning it (in those days we didn't have all the great tools we have today, not even cassette tapes, let alone keyers and computers). I wanted ham radio to be as easy as CB, just like you do. In fact I was dissapointed at the complexity of the exams too. I just wanted to mess around with a higher power AM rig that I could get for CB!

All of that's in the past now, and it will be for you someday too. You can do it. After all, I did it, and let me tell you, if I can do it just about anyone on this newsgroup can do it. It's just attitude. I also suspect as you master the mode you'll learn things about Morse Code that you never imagined, and a few about yourself.

One final comment, CW remains the most efficient mode of communication from several aspects technically. In addition it's the most simple to implement, least expensive to manufacture etc... With all of these "best in class" comparisons, I think CW is very much state of the art. In fact, because it is also language independent (Q Signals, Standard Abbreviations and No Accents), it opens communication between billions of people, something SSB other voice modes will probably need another century to accomplish.

Hello Bart...

I use 8.5" x 11" "cover" stock. It's the right weight, comes in many colors, and is cheap (10 cents or less per sheet) in most office supply stores.

Set up your QSLs 2-up and 2-across on this sheet and cut'em apart with an X-acto knife... gives 4 cards per sheet. Price is right at 2.5 cents per card.

I've made my cards 3.5" x 5.5" which is as close to "standard" as you can get... I have a bit to trim off on the 8.5" dimension of the sheet.

Have fun.

73

Rod Elliott VE3IRF
elliottr@hurontel.on.ca

The 8.5X11 sheet is much easier to feed thru most printers than individual cards.

6844. "Sidney Pig-Slop on 3950Khz. Another ZOO on Amateur Radio

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-31 00:00:00 UTC
From: mnmaniac@aol.com
Message-ID: <19970331052700.AAA15936@ladder01.news.aol.com>
Source record: 201399

Another response from the "Maniac Mailbag"...

>>>
Yes Drew, as I am typing this at 10:20 Central Time, I am SWL'ing another stellar example of ham radio at it's finest. I have the SW-8 on 3.950 Khz, which seems to be the home of Rush Limbaugh type ham radio.
There seems to be one player who stands out in the crowd. He's not on all the
time, but when he is on, he will absolutely turn the frequency on it's end.

It's the "Sidney cavlcade of R.F. Pig-Slop"

Sid appears to be another dottering old-time ham operator in New Mexico, who IMHO, is quite probably the greatest living example of the quintessential RF curmudgeon on the Amateur Spectrum today. Among his on-the-air antics and trademarks are his labeling of anyone who QRM's him as a person who likes to have sex with domesticated pets or farm animals, a seemingly limitless ability torefer of anyone of color in the most deragatory and degrading language available,an incredible ego which is as big as his alleged bloated body (Sidney is rumored to weigh in at close to 400 pounds in his greasy dennim overalls & cowboy hat) andhis ability to rachet-jaw for for hours at a stretch in the most mindless andtastless drivel from sundown to sunrise. (the current record is rumored to be a stint that oncelasted for 27 Hours straight)

He appears to be an eclectic mix of the guy in the movie Deliverance, a red-
neck southern sheriff, the slave-whipper from Roots and Homer Simpson all rolled into one grossly overweight, flatulence-laden package.
An excellent and fitting example of ham radio communications in the 90's.

You might want to try and catch this guy some night when the band is going for skip Drew. One really has to hear him to believe it! He's easy
to hear as the stations he's doing battle with in the North claim he's running 3 Kilowatts out.
>>>

I just tuned in to hear for myself. S-9 noise floor. Someone cussing out "Snuggles", rap music, references to sex with "N's" and farm animals, and...this is the best one...a continuous tape loop of the HOGAN'S HEROES" theme!

Suddenly, the little LEOs don't look so bad after all.

And the hits just keep on coming...

-Drew in Sunny Central Florida-

6845. CW -- PRO

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-31 00:00:00 UTC
From: Thomas Foster <tlfoster@ix.netcom.com>
Message-ID: <333F750C.4859@ix.netcom.com>
Source record: 201400

Well, I've been reading this newsgroup for several months now on the pros and cons of CW testing, and I've done quite a lot of cogitating about it. Respectfully, here are my thoughts which embody the thoughts of others as well:

1) There are those who denounce the code as archaic and inefficient, and because all other services have abandoned it in favor of more efficient modes of communication, so should we. I believe CW is still an *effective* means of communication, though not the most efficient.

2) I want to preserve the CW testing for two reasons: First, code proficiency is truly a skill whose development requires many hours of time and energy. What other mode of communication requires this type of mastery? None! Secondly, I want to preserve the CW testing,
because there are many hams and prospective hams who will not be motivated enough to master the code. This lack of motivation will help delay the inevitable -- a severe congestion of the HF bands. Some will contend that the HF bands have already reached this point.

3) There are those who will argue that the code requirement is a bias against those who will not, or cannot, develop the code skills. However, I'm convinced that the vast majority of people can develop
sufficient code skills to pass a 13 WPM test. Anyone who can recognize the "shave and a haircut" rhythm can develop the skill. After all, the code is nothing more than rhythmic sounds! A few individuals say it's impossible to learn the code at a 13 WPM speed, because they can't copy a character or two behind. From my own experience, I don't have to copy behind at 13 WPM -- There's time enough between characters to copy a character before the next one is sent.

4) For those who don't wish to master the code, or for the few who can't, there are the VHF/UHF bands. On these bands one can communicate and experiment to his heart's content.

Best regards to all,
Lindsay

I hope that you never have to find out what it is like to have a
disability... until you have faced it first hand... fuck off.

Also a pilot - car driver can kill someone... a radio can't. Try
again w/ something better. That example really stunk.

I'm using it for a telemetry link between a solar powered race car and
our chase van. You are allowed the bandwidth up there to use high speed
data links, although we are only using 2400 baud, the drivers voice is on
a 20khz subcarrier (its a 900 mhz FM rig) so the bandwidth is increased, we
end up with one tx for both simultaneous data and voice using less power and
much lighter weight than two transmitters.

I wondered when you would discover Sid I have refered to him in the past as an example of the filter without using his name.

Actually Drew he is affectionatly locally as "Sid the Lid" callsign K5BLB (K5BigLoudBully)first licensed in the late fourties or early fifties. So much for the "Code is a filter" myth. This dude lives about 75 air miles from me.

An interesting story I'll share with you. When ol' Sid the Lid showed
up in New Mexico he had a lot to say about hispanics (about half the
local population) most of what he said was negative. Another
interesting fact is that wood cutting is a local cottage industry. This
makes the ownership of chain saws quite common. It turns out that chain
saws work equally well on REA poles as they do on trees. After
replacing Sid's poles a few times the REA got bored and he spent a year
on a genset. There are more stories but I'll save them for later.

Keep up the good work. 73 Jerry

>>Though I have seen some things going around regarding the
>>FCC trying to sell off the 2 meter, 220 and 440 bands...

Yessir...partially true...you need to get the WRC-97 UPDATE TEXTS
that ATTENTION to Details BBS offers:

ATTENTION to Details BBS is currently offering these Amateur Radio-
related files via its free FTP service:

KEYWORD DESCRIPTION
==========
MAC-HAM List of 75+ Amateur Radio-related files for the Mac
available on ATD BBS. 10K/TEXT

NECUTILS Those infamous, difficult-to-locate NEC laptop setup
utilities. 17K/ZIP

NICADS Informative article on the care and discharge/charging
cycles of NiCad batteries. 14K/TEXT

RFI-TELEPHONE ARRL FAQ dealing with RFI and telephones. 22K/TEXT

WRC-97 As long as the threat to 2M and 440MHz continues, we
will update this information package of texts relating
to the "Little LEO / WRC 1997" issue. 29K/ZIP

HELP Returns text File with all active KeyWords. 12K/TEXT
==========

How to Use the FTP Server at ATTENTION to Details BBS

The ATD BBS FTP Service is offered as a cost-effective means to obtain
information and files from our Bulletin Board System (BBS) - using
Internet E-Mail as the method of exchange. Using our FTP Server is as
simple as addressing an Internet E-mail message to

ftp@atdbbs.com

containing one or more KeyWords. Multiple KeyWords can be combined in
a single Message - but it is very important that there be only ONE
KEYWORD PER LINE!

EXAMPLE: You see from the above list of KeyWords that you want a copy
of our textfile on NiCad batteries and our Help file. Address your
Internet E-Mail...

TO: ftp@atdbbs.com
SUBJECT: [anything here is OK]

...and write the corresponding KeyWord, NICADS, as the ONLY word in the FIRST LINE of your message. And write HELP on the SECOND LINE of your message. That's all there is to it!

ATTENTION to Details BBS Sysop: Clint Bradford

No one is suggesting that you or anyone else should be
denied the right to learn and use CW. Testing as an
element is the ONLY issue.

> 2) I want to preserve the CW testing for two reasons: First, code

Your point? Or more specifically: How does that relate in
any way to amateur radio licensing requirements. It sure
isn't in part 97.

>Secondly, I want to preserve the CW testing,

This is nothing but speculation. It is unsubstantiated opinion only.

Irrelavent..the above is in no way a reason to have morse testing.

Yes sir, all those coded hams that never use CW on HF are a tribute to
the reasons you cite above. Did you also know that no-code hams
CAN use CW on VHF anyway. That being the case,
why test for HF only?

> it prohibits the code test free from getting on HF.

I find it hard to argue against your logic, but I also believe that
we have the dual problems of preventing yet further hf congestion and
also populating and defending our vhf and uhf spectrum. The present
system appears to offer a mutual solution for both of these.

> >It seems to me that if the no-codes abandon the vulnerable vhf bands,
> >then these will be left underused and undefended.

> Sure, but do you think that amateurs are going to wholesale abandon
> their very useful VHF/UHF spectrum just because they can also operate
> HF? Are the only people using VHF/UHF Techs? Certainly not.

Not only, but my belief which I feely confess lacks any factual
support is that a very large part of the non-mobile vhf voice
activity is by those unable to move elsewhere.

If an altenative model could be found which protected both hf from
overuse and the frequencies above from underuse, I would not fight it
on the principle that Morse Code skill was necessary for hf operation.

Hey, Bart.

Have you considered using a self-adhesive label which you affix to an ordinary card after printing? Just a thought.

Best regards,
Lindsay

Well, my point is this:

As long as I've been a ham (35 years), there has always been a code
requirement. Requiring a proficiency for a mode of communications which
is *still effective* is an excellent means for controlling the HF
congestion, since it is a mastery which many folks will not care to
develop. In other words, those who have a passion for operating HF will
develop the necessary skills of code, and those who don't have that
passion won't! Those folks who don't desire to master the code can
continue to use the VHF/UHF region.

Making the written tests more difficult is not the answer! That truly
will limit the folks from all "walks of life." Like I said before, I
believe most people can master the code. It doesn't require above
average intelligence.

Exactly! As I stated, these are my thoughts.

Well, no, the above section alone is "no way a reason to have morse
testing." That, simply, is my thought about learning the code. I believe
most folks can master it.

Well, Bill, like I said before, I want the code testing as a requirement
to the more advanced licenses. That will preserve the only "art" that
ham radio has. I'm aware that there are many hams who don't operate CW.
That's their choice. I'm sure that there are many HF operators who
contribute to Amateur Radio whether they use CW or not.

Miniature Stereo Transmitter plugs into any earphone jack or audio source including Walkman, CD, TV, Electronic Keyboard, Computer, and send signal to any FM Radio or Walkman. Only $24.95 + S&H

Suggested Uses: Play portable CD or Tape through car radio or Stereo System

Private listener (Wireless Headphone for TV

Listen to computer sound through stereo system

Wireless music throughout your home

Play electronic keyboard through your stereo system

Transmit sound for hearing impaired

Check us out at http://www.cyberenet.net/~eeinch

6869. QUICKIE ANTENNA was: Non-mag mount scanner aerial?

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-31 00:00:00 UTC
From: doc@NOSPAMdxnet.com

Try this:

Get a rigid plate of metal or tin. Drill a hole in the plate to mount
your antenna. Bend the plate so you can roll the window up from the
bottom of the bend!

Coax feeds into the window to the left or right of the plate.
Important! DON'T crush the coax!

You may wish to hot glue two short lengths of coax jacket on the
plate edge, at the bends to allow more area for the coax between the
window and the window channel. Slice the jacket like a hot dog bun to
fit.

```
*
* *
* * {metal plate,

******* ********* **** Side View}

(hole) (bend for Window)

Our group has linked many repeaters using simplex, hub, and full-duplex
links. I'd be happy to correspond with you on ways to do it.

As one of the other posters pointed out, repeater controllers that have
a link port make it very easy. See the 7K datasheet at the S-COM Industries
web site (http://www.rmsd.com/scom/) for info on their controller. They
also have a discussion list. Many of the subscribers have linked repeaters.

6871. Need Mounting Advice for 2M Mobile Rig

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-31 00:00:00 UTC
From: w6uv@ccnet.com
Message-ID: <333f50de.9269318@news.ccnet.com>

I need to replace the trunk-mount 2 meter rig I have in my car and I'm thinking of replacing it with the Yaesu FT-2500M, or something similar.

Since this type of radio isn't trunk mounted, I need to mount it up near the dashboard. My car (Mazda 626) has an in-dash radio-cassette player, and right below it is an empty space which is reserved for the factory-installed CD player (which I don't have). The space is filled with a plastic insert for storing stuff like cassette tapes, etc. I plan to remove the plastic insert and mount the 2M rig in the empty slot.

Has anyone mounted a small mobile rig in such a space? Are there mounting adapters for common Yaesu, Icom, or Kenwood rigs and/or 2 meter rigs that are designed to fit in such a space, which I assume must be a standard size, since most after-market tape and CD players seem to fit as if they were made to?

I'm also looking for hints for removing the dashboard front panel to gain access to the mounting slot without damaging something in the process.
